I have walked the streets of New York after midnight to see hundreds, thousands of specters, shod with shoe debris, tattered, unkempt, haggard, surge from no one knows where, creep and limp along the house-walls, mute, noiseless as ghosts. Opposite the barrels of refuse with which the New York streets are studded at night, a specter and his shadow detached from the house wall and made a bee-line towards the barrel, plunged his hands into it, brought out pieces of bread or other edible more or less foul, cast around a furtive glance and sneaked to the corner to devour his miserable pittance.

Shall I say that tears came to my eyes and my heart broke at the sight of that unutterable human degradation? No! tears came not to my eyes and my heart broke not. In the presence of so appalling a social fact, tears refuse to flow, the heart refuses to break. The dread calamity calls not for soft emotion, it calls for solid action.

On the scene of that terrible piece of realism did newspaper reporters appear? No, they were in their offices arranging notes to construct the sensational report of a supper at Delmonico, or of a ballet where nudelims kicked and slippers flew in the air to the great delight of decrepit old millionaires. The editors of newspapers were better engaged, they gathered matter to write a rousing editorial about the wealth and greatness of the American Republic and the fizzle of a republican or a democratic convention. And when, a few hours later, the dawn gilded the gates of the east, the phantoms which prowled around the barrels of refuse had vanished, no one knows where, the city awoke, traffic made the streets lively and the newspapers full of good news delighted the hearts of the Wall street gamblers, the politicians, the capitalists, the aristocracy of labor and the brainless dudes.

Not until the last days of June, this year, were we aware that we lived in a "fool's paradise." At that time a spark revealed to us the chasm over which we hang. A boycott made by one labor organization to redress the grievances of one of their sections suddenly called up tens of thousands of sympathizers and culminated in a strike whose ramifications embraced the largest part of our territory and threatened to clasp in its powerful arms every one of our states. System after system of railroads was tied and commerce depending on transportation came to a standstill.

At the first indications of a strike the managers smiled with pity and contempt. They had never stood in fear of their employes

who were too much divided to make a stand look anything else but a ludicrous attempt to smash their heads against a stone wall. But that strike under notice burst out and rolled with the impetus of a flood breaking through dams. Wherever it passed, men, women and boys rushed to join in the loud protest of labor against corporate oppression. The smile of the managers was now a grin. Above the uproar of congregated protesting toilers (called a mob by the virtuous press) two words rang like a tocsin, "sympathetic strike." Managers listened, turned livid pale and trembled with dread. "That means unity in the ranks of labor," they muttered, in quivering voices; "let us hamper their movements and prevent a fusion or we are lost!" In their terror they cried to the government: "Turn out all the force you have, crush this uprising or we and you are lost!"

At the words "sympathetic strike" the government went frantic with apprehension. Troops were called and shipped with a haste which indicated great danger to face. No sudden invasion by foreign armies ever created more tremor. State sovereignty was trampled under foot, and to the calm, judicious protest of Gov. Altgeld, the head of the republic replied with a tone of haughtiness which his state of trepidation alone can excuse. Government attorney Olney, private attorney of the corporations and stockholders on roads, ran through volumes of statute laws to find those he could best twist and warp to crush labor and save his and the corporations' property. The press yelled itself hoarse clamoring for the blood of all those who dare injure a wheel or scratch a panel of Pullman cars. "Protect property!" they shouted in morning editions, in evening and middle-day extras.

But over and above all that fanfaronade and judicial clap trap, one thing alone terrorized the capitalist and legislators. The boycott—strike-hurricane—embracing all the toilers of the land in a common bond of sympathy, the hundreds of thousands of workers whom all the devices of their gentee, law-worshipping leaders aided by the force at the command of established authority, could hardly restrain from throwing up their work and forcing on insurrected capitalism and the legislature a surrender to labor rights and demands. In all the nightmares that late suppers and champagne set on a gambol in the brains of the capitalists, nothing so awfully startling had ever appeared. "A general uprising of labor for the redress of the grievances of a small body among them! By all the powers in hades, did so infernal a freak ever happen in history?"

For, being new, the thing was none the less real, and mightily tangible at that. Newspaper editors, where were you while

this tremendous force of labor gathered and solidified? Why were you not alive and give the hint to capitalists? You feared to dim their peaceful felicity! I believe you; for a wonder, you speak the truth.

Labor in its turn was ill informed about the power of capitalism. The workmen cherished their belief in political equality, and looked upon the law and the government as a third party, an umpire, a mediator impartial between them and the capitalist. Man to man, they had a fair chance of victory. That government troops could be called out to shoot them and protect the corporations which overtly prevented the running of mail cars by hitching to them and next to the locomotive Pullman sleepers; that such a treason and distortion of statute laws could take place not one toiler in ten thousand would have suspected. This strike has likewise been a revelation to them. It is not capitalism alone they are called to fight, it is the entire country outside of themselves, the entire force of the army and the police, the combined array of the state, the church and the club. To the upright, unsuspecting, genial sons and daughters of toil what an amazing revelation!

### LIVE QUESTIONS.

BY S. D. GUTON.

Even if the object of the present strike should be attained it would be at a tremendous cost; a cost altogether beyond any benefits possible to be gotten from it. The mere forcing Pullman to arbitrate, even though it should result in opening his shops and increasing wages, could affect the situation but temporarily, and then in no degree commensurate with the wants, demands, and rights of the masses. It would be but a palliative, and a weak one at that. Not only a palliative and a weak one at that, but as soon as they find their condition even a little improved they would lose in some degree their anxiety to maintain a warfare, and their energy in their own cause would weaken and die out, and at the next election they would vote the same old ticket, and monopoly would still have them firmly in its power.

The A. R. U. was gotten together not to compel their masters to give it a palliative, a mere temporary boon, but to demand and enforce the placing upon the statute books such laws as will compel monopoly to do to labor complete and lasting justice. As long as the present laws are in force and the present system is maintained, the condition of labor cannot be improved except temporarily and in isolated cases.

I say that it is utterly impossible that anything permanent can be gained by striking; it is not in the nature of the case. The attempt might as well be made to bail

out one of the great lakes as to attempt to benefit labor by striking. The lake cannot be bailed out while water lasts, neither can striking benefit labor while the present system is maintained.

They have got together. The biggest labor organization ever known has been gotten together, and if properly managed, and those economic doctrines promulgated throughout its ranks, doctrines which when formulated into laws and placed upon the statute books will permanently benefit labor, make this the prime object of its being, restrict strikes to but incidents that may possibly occur, and its membership will surely continue to increase.

Success can only come to any cause—it can be attained only by conforming strictly and undeviatingly to the natural law of cause and effect. Figs cannot be grown from thistles, neither can labor be benefited by keeping in force those laws which must necessarily impoverish the laborer, though they may even be maintained by the sword and by public opinion. Success can only be gained by conforming the civil to the natural law. Strikes can only act as impediments.

Labor is impoverished. Why? What is the cause? Will strikes remove the cause, or even lessen the impoverishment? Will the abolition of immigration remove the cause or lessen the impoverishment? It might lessen it in a degree for a short time, but so long as the present system is maintained monopoly will find means to absorb all that labor can produce. These and other schemes that labor may propose are but palliatives and can be of no permanent value; in fact, inasmuch as they seem to do some good they put off to a later day the realization of the permanent and lasting, and so are evils. Strikes are illogical, and when entered into for the purpose and with the expectation of gaining any good, it evinces some degree of lunacy.

To insure success the means used must always and in every case conform to, and have direct and intimate relation to the end sought for. Labor organizes for the purpose of bettering its condition. It wants higher wages, shorter hours, some of the pleasures and luxuries of life. Is striking the natural and most direct means to attain these ends? Will it enrich the employer so that he can afford to pay higher wages? Will it enable him to lessen the hours of toil? Surely not. It will have a contrary effect. It will anger him, thus he will become an antagonist, and render him less able to pay higher wages or lessen the hours of toil. Again, striking will deprive the members of work and wages entirely, produce hunger, nakedness and unhappiness. Natural law cannot be abrogated, evaded, nor set aside; therefore,

strikes must produce these results. Every effect must accord with its cause. These are the logical and inevitable effects of strikes.

The object of labor in getting together is to devise ways and means to bring about a betterment of the condition of the laborer. These ways and means must be in conformity to, must be in accord with, the natural law of cause and effect. A fireman wishing to get up steam in his boiler will put coal in the furnace, not asbestos; wishing a hot fire as quickly as possible he will open the damper and put on the blower, so as to create a draft, he would not turn steam into the furnace. He would follow natural law. If labor would better its condition it likewise must follow natural law and pursue scientific methods.

But what is the condition of labor? It says that it does not get work or wages enough, that it can get but few or none of the enjoyments, comforts and pleasures of life. It sees vast quantities of wealth, great storehouses filled with food, more than enough for all, mighty warehouses piled up story above story with good things. Labor has a natural longing for a sufficiency of these things, declares that it produces them all, and that it exerts itself to its utmost to obtain all it can of them, yet as the years roll around, though it tries ever so persistently and faithfully, it finds itself with less and less, and it ever must beset while the present system of taxation is maintained. Labor, to better its condition, to get some of the comforts and pleasures, and obtain the good and necessary things of life, must insist that the present system be abolished, and exert all its power to have adopted a just and equitable system. The present inequitable system compels labor to pay all interest, profits and taxes. Monopoly has arranged it so that all these are first paid from the product of labor, and so what finally come to labor as wages is but an infinitesimal part of what it has produced—about one dollar in seven. The present system of taxation robs labor and enriches monopoly.

The great masses of mankind have been defrauded of their heritage and it has been done by taxation. The fraud has been and is continually being perpetrated in such a manner as to make it seem a good thing, a very blessing to the poor and helpless. The arguments used to prove that is righteous instead of fraudulent and wicked are sophistical, and that sort by which black can be proven white, and white no color at all. For centuries the people, by such arguments, have been led to believe the superstition that private property was God ordained, and that the landlord was such by decree of the Almighty. As long as the landholding class can hold the masses in

subjection to that superstition monopoly will not fear but that it can draw to itself all the wealth the world can be made to produce, except a bare living for those who labor and produce it.

The landlords having the monopoly of the land, have every good thing they desire while the masses having no land are beggars. The reason there are so many beggars, the reason there are any beggars, is because the right to private property in land is maintained, and this is done by the power of superstition, the people believing that it was divinely ordained. But the power which did ordain or could ordain it was the power of the landlords. They assumed the right and enforced it by the power of might. Every title to land in England can be traced back to force and fraud, and were written in blood with the point of the sword. It was only by following the customs and usages of England that private property in land came to be recognized in this country, and is having the same malign and pernicious effect in this country that it has had there. When the masses have come to understand that their condition, that the poverty, misery and degradation that exists, was and is not caused by a God, and that such an idea is a pure superstition, but that all the evils which afflict society are caused by man-made laws, they will then be ready to wipe those laws from the statute books. Civilized man must have a government; it must be supported, and society must furnish a fund for its support. Society does now, and at every stage of its growth has furnished this support. Since civilized society has existed land has had value. Society causes the value (which is a self-evident fact), but the landlords, having made the people believe in a superstition, have been able to appropriate that fund to their own use. It has been clearly shown that the only authority to hold private property in land is given by man-made laws; then, by man-made laws it may be taken away, and inasmuch, and because the holding private property in land is the sole cause of poverty, misery and degradation, and all kinds of evil, these man-made laws must be abolished, must be rendered null and void. All that is necessary to do this is to take by taxation that fund which society annually creates for the support of government, and abolish all other taxes. Natural law gives every man the right to use any idle land, but society may compel every man who uses land to pay into the public treasury the rental value of the land for the support of the government. If labor will study this subject it will find that under this system it will get higher wages, shorter hours, and an equitable share of the comforts and pleasures, the good and necessary things of life.

## FREEDOM UNDER CORPORATE BARONS.

BY JOSÉ GROS.

There is no doubt that this nation of ours has recently had an admirable object lesson of our own blunders. We refer to the events in Chicago during the first two weeks, July 1894.

We shall not waste our breath against individuals. We are dealing with national sins. We don't really see how we could expect better results from the policy we have been following all along in our national history, constantly sanctioned by the masses and the classes, by the poor and the wealthy, by the ignorant and the wise. We should, of course, recognize that, in God's eyes, the wise and the wealthy in each historical period, are far greater criminals from any social deformities allowed to go on year in, year out. Yet, the wealthy are constantly rising out from poverty, and the wise out from among the ignorant.

All social deformities must necessarily spring up from empirical conceptions in the science of social growth. But who knows anything about any such science? A few cranks here and there. That is all. Has that science been taught in churches or schools high or low? Never. Far from that. On this side of the ocean we have been made to worship our own institutions as the *ne plus ultra* of human growth. Yet, when we study the struggles of the men who established our institutions, we discover there what? A bitter fight to mix up good and evil. An intense distrust on the part of the men with property against the men without it, or very little of it. To be sure, that is the history of humanity everywhere. And all because of no conception about a science of social development.

Science means precision, symmetry, harmony, equilibrium. All that implies the brotherly interlinking of forces and forms, unity of purpose in a march towards grand results for universal good. Has that been the object of any civilization, of any code of human laws, of any constitution?

Can you give us any reason for the few to always have masses of property and the many mighty little, if any? We mean reasons based on laws in nature. You will tell us, because some men are born with great ability and others are not. Grant for a moment that that is so. Take two men, one with great ability and the other with but the average ability of most men. Place the two men by themselves on two different islands with the same natural resources and conditions. Let even the great ability man start in island No. 1 with a capital of 20 millions, and the average ability man in island No. 2 with but a capital of \$5,000. Leave each man there, with his wife, a baby, for any fifty years. Go there, to those

two islands, at the end of that half century. Do you expect to find any especial difference between those two family groups, in their general comfort. Hardly. Why? Because neither of those two men has been able to humbug any other men, to rob any other men through monopoly in natural resources, and much less through patents or franchises with which to intensify monopoly by additional restrictions in this or that line of production or commercial activities.

Look now at that historical Pullman town, with about 11,000 population and shops for the manufacture of a certain line of goods, employing, say, 4,000 people, men, women and children, in that population of 11,000. What do you see there? The value of the labor products, buildings, machinery, materials at hand or in process of exchange, conducive to the working of those shops or factory, is about three millions of dollars. The capital of the company is sixty-one millions, of them, twenty-five in surplus. Out of those sixty-one millions total capital, about fifty-eight millions, call it fifty-five millions if you like, what are they? Nothing but land values, or accumulated land rents, and patent profits, nothing but profits resulting from human laws of privilege sinning against the law of equal rights, violating the *thou shalt not steal* of the Decalogue, blaspheming against the brotherhood preached by the Christ we pretend to worship.

Should we blame the barons of the Pullman Company for all that, or their brethren, the railroad barons? They are all created by our own laws and in virtue of our own constitution. Grant that we could interpret that constitution a little better; but, have we not ordained that laws should be interpreted by a group of men whom we call judges?

Just before writing this article we had a little talk with a man who is now in very comfortable conditions, the son of a poor mother, himself a hard worker, a model man in most respects, with no grasping instincts, generous, willing to improve humanity; but, like millions of other men, unable to conceive how humanity can go on if government limits itself to enforce the law of equal rights, the law of universal brotherhood. We should have no railroads, no telegraphs, no telephones, no men shall give us any useful inventions unless human laws come to transgress God's laws of equal rights, inviting the ability men to do what they like with the earnings of those who have less ability, for the time being. The laws of a wise creator, or of nature if you so prefer, are deficient in wisdom, and selfish men must come with human laws to the rescue, and invite the selfishness of the ability chap, otherwise the inventive fac-

ulty shall remain dormant forever in the brains of that being whom we are told was built up after the image of his own creator.

What can you expect of humanity as long as profoundly religious men, good men too, men with golden souls, have yet such low perceptions about the intrinsic beauty of their own God.

The destinies of this nation are in the hands of the workers; but they need high moral aspirations, considerably higher than those we find anywhere among most people in all classes, high or low. Each one of us needs to have the courage of his own convictions, sufficient courage to look at truth face to face. If we want freedom we have to work for it. We have been working for freedom under corporate barons, and we have it. If we don't like it let us suppress it. The barons that human laws have created, human laws can destroy, and should destroy, if they, the barons, interfere with the grand divine ideal of manhood universal.

The problem of humanity is not that of living wages, or fair wages or anything like it. The problem is to give to the workers the whole product of labor. The whole wage system is wrong from top to bottom, under King Monopoly. That king converts republics into dens of thieves with a mask of righteousness.

The task before us is great indeed, because of the inertia of the working masses. Without that, we could march to the polls in 1896, 10,000,000 strong, with one, two or three short, precise, fundamental bills, with executive officers of our own, from the people, and just break the doors wide open, for every one of us to step into that *Promised Kingdom of Righteousness*.

Sooner or later it must come to that or to a military despotism. It is for us to choose.

We are inclined to think that all our evils arise from worshiping our own institutions too much and God's institutions too little.

## LESSONS FROM THE STRIKE OF 1894.

BY JAMES MIDDLETON.

The great railway strike of 1894 is practically over. Another great battle between laborers and capitalists has been fought. The laborers have met defeat.

For a time great arteries of the nation were paralyzed. Passengers and freight were blockaded. Vast quantities of fruits and other perishable products were ruined, and would-be consumers in Chicago and elsewhere suffered for lack of them.

If the strike had been more widespread, more determined on both sides, and of greater duration, the mind can hardly conceive of the suffering from hunger in the large cities and of the desperate state of af-

fairs that would have been evoked.

Unless some remedies are applied the time is coming, and may not be far distant, when labor on railways will be more completely organized, and will join in battle to the bitter end with those who control our steel highways; highways that are just as essential to our social existence now as were the wagon roads of our forefathers to their social life.

What shall be done? Shall strikes on railroads be forbidden by legal penalties? Shall railway employes be forbidden to organize or to consult together and to advise each other concerning the wisdom or unwisdom of striking?

Such is the remedy some propose. Such is the remedy some high in legal authority have sought to employ, making laws without the formality of legislatures.

In all conflicts between the strong and the weak there have been found judges and officials who make haste to act as the tools of the strong in crushing the weak. On the other hand, there are always some whose ermine is not stained; officials who dare do right, regardless of friend or foe. In their increase is hope.

The right to organize, the right to strike, is a sacred right which must be jealously guarded. Yet it is a right that may be sadly abused. It may be used to further wrong and injustice, but the right must remain.

Compulsory arbitration is advocated. Let the workman beware of compulsory arbitration as he prizes liberty. If the general government should step in and say to an employer, "You must run your business and you must pay such a scale of wages," it would mean the annihilation of that freedom which the anglo-saxon has always prized more than life itself. None the less would it be a death blow to that freedom if the state were to tell the workman that he must work, and at a scale fixed by the state under penalty of the law. Whether looked at from the standpoint of employer or employee, compulsory arbitration is a remedy infinitely worse than the disease. To the workman it is especially full of menace. When we find courts and officials too often anxious to do the bidding of capital, what guarantee is there that boards of compulsory arbitration shall always act justly, either to employer or employee?

What, then, shall be done? Shall our great cities ever be in danger of starvation from such conflicts? Yes, rather than employ such remedies. The true way is to find out the fundamental causes and to remove them.

The first great cause is selfishness. That cannot be removed by the action of government. That must be done by moral forces outside. Another cause is the great army

of the unemployed men whose wives and children are suffering for the necessities of life; men who would rather be called scabs and bear the contumely of organized strikers, than to see little ones suffering for food and clothing and look at the haggard face of their starving wife.

While the striker, seeking his just share of production, should evoke the sympathy of all, yet the great army of the unemployed should evoke a deeper sympathy. Organized labor must get rid of this great army, if it would receive its full share of the product. When there are two men ready to take the place of each striker, strikes must often fail of their immediate object. When there shall be a greater demand for laborers than there are laborers to fill the demand, then strikes will be unknown; then each will receive his full share of the product. The iron law of wages will always act downward when there is a reserve force of the unemployed for capital to call upon. Just as surely, as rigidly, will it operate to raise wages to the maximum when the demand for laborers exceeds the supply.

To remedy this condition of things is in the power of government. "Cease to do evil; learn to do well," is as applicable to governments as to individuals. The evils are unjust monetary laws, whereby a favored few are privileged to exercise functions that belong to the people as a whole; the placing of franchises in the hands of a few; and, above all, beneath all, unjust taxation, favoring capital at the expense of the consumer, fostering monopoly and speculation generally, and in land, the fundamental basis of life, especially.

The great aim of organized labor should be to help sweep away these evils by education and the ballot. Through the ballot we may gain a just monetary system. Through the ballot we may bring the steel highways, the great arteries of the nation, to the nation itself, and make them as our wagon roads are, the property of the people, and not of a favored few to lay the many under tribute and to control too often legislatures and other public officials.

Through the ballot we may sweep away all taxes upon the products of labor, as products, and make the owners of mining lands, agricultural lands, water privileges, and city lots, pay the taxes in proportion to the value of the natural opportunities they enjoy under the protection of the state.

Laborers and small capitalists will be freed from the present burdens of taxation by government and quasi taxation by favored individuals which is now crushing out life itself. Opportunities will then be opened to those who wish to employ themselves. Every industry will be quickened, the demand for laborers will exceed the sup-

ply. The great iron law of wages will be transformed from a baleful weight of oppression into the wageworkers' potent ally, assuring him the full product of his toil. None should ask for more, none should be satisfied with less.

While the great moral agencies should work to remove selfishness from the human heart, these reforms must come through the ballot. The one will help the other until selfishness, oppression and injustice are swept away, and freedom, justice and love reign supreme in governments and in human hearts.

These are lessons of the strike. If the people heed them not, the future of our country, of humanity, is full of gloom.

If they are heeded and produce their just results, the strike will have served a useful purpose and will have been a marked step in the accomplishment of the dream of the ages, the complete triumph of freedom, justice and love upon earth.

Then strikes will be unknown.

## DESTROY LIBERTY TO PRESERVE CIVILIZATION.

BY J. S. ALLISON.

The *Progressive Farmer* directs attention to a dispatch sent from Washington, July 2d, to the Chicago *Inter-Ocean*. In it the following words appear:

Public men here are very reluctantly arriving at the conclusion that this country may be called upon to decide whether it shall become necessary to destroy liberty in order to preserve civilization.

Commenting upon it the former paper says: "This is one of the most astounding, and indeed the most startling declaration that has appeared in the plutocratic press." Farmers and workingmen, read carefully these lines. Weigh them well and reflect. Consider in what short time you may have no voice in the affairs of this republic.

It may not be out of place to examine this "liberty" and "civilization." It will not be denied that there are several kinds of "liberty" and a "civilization." First, there is natural liberty and civil liberty. Then there is political liberty and religious liberty.

Natural liberty is defined as consisting "in the power of acting as one thinks fit, without any restraint or control, except from the laws of nature." Is this the kind of liberty to be destroyed by plutocracy in order to preserve civilization?

Political liberty is "the freedom of a nation or state from all unjust abridgement of its rights and independence by another state." Is this the kind of liberty which plutocracy proposes to destroy in order to preserve civilization?

Religious liberty is the "free right of adopting and enjoying opinions on religious

subjects, and of worshipping the Supreme Being according to the dictates of conscience without external control." Is this also the kind of liberty which plutocracy intends to destroy in order to preserve civilization?

"Civil liberty is the state of men in a state of society, so far only abridged and restrained as is necessary and expedient for the safety and interest of the society, state or nation." Is civil liberty, then, to be destroyed by plutocracy in order to preserve civilization?

"Civilization is the state of being refined in manners from the grossness of savage life, and improved in the arts and learning."

Did the dispatch to the *Inter-Ocean* mean that liberty, whether natural, political, religious or civil, is to be destroyed in order to preserve the people of this republic in a state of being refined from the grossness of savage life and improve them in the arts and learning?

No, verily! By "liberty" it meant the right of voice or vote in the management of governmental affairs, and by "civilization" is meant the maintenance of the present conditions brought about by the passage of unjust laws through the influence and power of corporations, capitalists and income classes.

The "civilization" to be preserved by the destruction of "liberty" is meant the continuation of the present arrangement of affairs by which the farmers, and other producers have been, are now, and are yet to be deprived of the major part of their produce.

The "civilization" to be preserved by the destruction of "liberty" is intended the perpetual existence of the conditions whereby the laboring class have been, are now, and are yet to be defrauded of the greater part of their hire.

The "civilization" to be preserved by the destruction of "liberty" is meant the everlasting inheritance, to us and our children after us, of the national bank system, national bonded indebtedness, protection alone for the manufacturing interests, and government partnership, with railroads, whisky trusts, and unlawful aggregations of incorporated and unincorporated capital of all kinds.

The "liberty" to be destroyed in order to preserve civilization is meant the destruction of all organized or unorganized efforts on the part of the farmers and producers to secure for themselves a living price for the produce of their fields.

The "liberty" to be destroyed in order to preserve civilization is meant the destruction of the liberty of the laborer or workman to obtain, with or without organization, a just and living wage.

And the "liberty" to be destroyed in order that civilization may be preserved is

meant that the farmer and the laborer shall be denied the privilege of uniting politically in the struggle for a competence, leisure, and education for themselves and family, while living, and a decent burial when dead. To successfully accomplish the failure such political union, would be all that plutocracy could desire. Failing in this, it would only be necessary to pass a law disfranchising the labor vote. To ascertain whether this has not been thought of, let us read what the *Indianapolis News*, democratic, says: "If the workingmen had no vote they would be more amenable to the teachings of hard times." Again, U. S. Senator Sharon, a republican, said: "We need a strong central government; the wealth of the country has to bear the burdens of government and shall control it."

The money power then seems disposed to perpetuate itself, if it has to take the ballot from the laboring class to do it. The right of suffrage being lost, the denial of the right to bear arms would easily follow. With both these rights lost, the laboring classes would be absolutely helpless at the feet of plutocracy. To be forewarned is to be thrice armed. Therefore, the sooner all farmers, laborers and workingmen unite in one common political party, and stand together, and vote together, the better it will be for them and this republic.

### GOVERNMENT BANKS.

BY GEORGE C. WARD.

At the very outset of an inquiry as to the feasibility of extending the socialistic programme so as to involve the common ownership of money or, more strictly speaking, so as to include in such programme the right settlement of what is known as the money question, or financial problem, it becomes necessary to divide the question into two divisions. These divisions may be known as Money—its nature and functions; and Money—its avenues of distribution.

A little reflection will suffice to convince one that, in its nature and functions, scientific and strictly honest money is already purely socialistic. In its very essence money is the material evidence and embodiment of a social compact. Where there is no society or social organization there can be no money. The fundamental and strictly essential attribute of good money—the legal tender quality—is the mandate of government, or fiat of law, impressed upon some suitable substance. Thus, Attorney General Ackerman says: "We repeat, money is not a substance, but an impression of legal authority—a printed decree." Again, Tiffany on Constitutional Law, Chapter XII., section 400, page 221, says: "Money is the sovereign authority impressed on that which is capable of taking and retaining

the impression." Hence money is a social compact, strictly socialistic in its character and attributes. There is not, nor indeed can there be, such a thing as individualistic money.

Then as to its functions, it will be found to be strictly of the nature of a social or communal convenience. It counts, determines and differentiates the value of the property of the people, both severally and collectively. It is a universal solvent, a general ultimate of payment of the debts of the people, both severally and collectively. Held by the individual, it is a sight draft upon the total volume of all the people's exchangeable commodities exposed for sale. Paid to the people's government, it discharges all obligations due from the individual to the community. Paid out by the representatives of the people, it cancels all debts due to individuals from society. It is a communal, or common tool, used by the people collectively and in common.

And then it is socialistic as to its ownership. The savings banks of the nation are responsible to 4,781,605 depositors for the safe investment and sure return of \$1,712,769,026, while the money of the country changes ownership at the rate of \$600,000,000 daily. It is certain that the banks of the nation are liable to the people in the sum of at least \$2,300,000,000 savings deposits, such vast sum belonging to individual units of society, above all liabilities and debt, as a reserve fund for enforced idleness, sickness, old age and death. This is twice as much as the banks could pay, even if they had every dollar of money in existence outside of the United States treasury. Money is the communal token—credit of society, to be used as occasion and necessity require. Money in its nature, attributes, functions and ownership, is of the very essence of socialism. It is against the avenues of distribution that the socialistic programme must be directed.

What then are the avenues of distribution? And if of distribution, what are the methods of prior accumulation? For it is certain that in order to be distributed, money must first be accumulated. An examination will show that the domestic and commercial transactions of the nation and the prosecution of its productive and distributive industries, involve a constant, ceaseless accumulation and distribution of the people's money. Paid out by the people, as individual units for the manifold and multifarious necessities and luxuries of life, money filters through retail stores, rental agents, doctors, lawyers, dentists, barbers, dressmakers, tailors, and the thousand and one servitors of public convenience and servants of society, until finally it reaches the wholesale stores, then the jobbers, and at last the manufacturers. Starting in

another direction, it is paid out by manufacturers, jobbers, wholesalers and retailers, railroads and other corporations to employes and again takes up its silent and ceaseless pilgrimage as before. Such of it as individuals manage to save above and beyond the cost of living is deposited for long time, at a low rate of interest, in the banks and becomes "savings deposits," to be loaned out at a high rate of interest to such as need it, to again start upon its endless round of travel. Those who own it and have saved it, hold the certificates of deposit of the banks, while the banks are secured by a lien upon the actual, material wealth of those who borrow it. But all this time very little of the money remains in savings banks, or the vaults of loan and trust companies, being freely loaned as fast as received. But in national and state banks there is constantly a larger amount of money—\$350,000,000 on Sept. 30, 1892—called "cash reserves required," and a smaller sum, \$108,000,000, which was a portion of the active cash banking capital of the nation, and, in the national banks alone, changes ownership at the rate of \$400,000,000 a day, the average duration of a deposit in these banks being four and one-half days. By this time we may perceive that the avenues of accumulation and distribution against which the socialistic attack must be directed, are the banking institutions of the nation. Not only do they accumulate and distribute, but they regulate and control the volume of active money circulation and affix the current, prevalent rate of interest upon money, thus prescribing what shall be the limitations of "the power of money to oppress."

Some idea of the important functions performed by the banks of the nation may be obtained by studying the following table in the light of the fact that the total volume of money in circulation, outside of the United States treasury, does not exceed the sum of \$1,100,000,000.

	National Banks.	All other Banks.
Loans, etc.	\$1,843,634,168	\$2,348,193,077
United States bonds	224,040,800	119,982,221
All other bonds	148,569,950	859,622,129
Capital stock	678,540,339	406,007,210
Surplus and profits	350,225,441	316,206,287
Deposits	1,465,446,901	3,070,462,680
Total resources	3,109,563,284	3,979,008,533

The above table reveals the fact that at that date (July, 1893) the banks owed the people nearly nine times as much money as they had in their vaults, while the people owed the banks six times as much money as there was in the country outside the banks. At the date referred to, the banking institutions had in their vaults \$515,000,000 in money. Another interesting fact

proved by the foregoing table is that every dollar outside the banks had been loaned by them nearly six times upon the average, while the same dollar had been deposited, on the average, by six individuals.

These facts unerringly designate and locate the avenues of accumulation and distribution of the communal tool, or instrument of exchange—money. The banks are the avenues and it is the banking business which must be included in the socialistic programme. The banking business of the nation must be assumed by the people's government, as a public function, and administered by public functionaries at the cost of carrying on the system. The cost of a perfectly adequate system of government banks would be about eighty millions of dollars a year, in addition to, say two per cent. upon the long time savings deposits of the people, which would probably have to be paid until the people became educated to a recognition of the fact that interest is an incubus and a curse, not only to those who pay it, but also to those who receive it. As all interest is an addition to the cost price to consumers of all necessities of life, and the average deposits of savings depositors are just about equal to the average earnings of wage workers, it is easily perceived that even were the banks to charge borrowers no higher rate of interest than they paid depositors, such depositors would lose in prices paid for commodities as much as they gained in interest upon their deposits. But the banks pay an average of three and charge an average of eight, so that labor would be benefited by the entire abolition of interest. But the banks pay interest upon only about one-half of their deposits and charge interest upon the whole, from which fact we may prove that even if governmental banks were to pay two per cent. upon one-half the deposits of the people, they could loan the entire deposits at the same rate—two per cent.—and yet very easily settle with depositors and defray the expenses of the banking system.

This would result in the establishment of a uniform rate of interest all over the United States, of two per cent. and, even upon only the volume of loans at present made by the banks, would save to the people \$250,000,000 annually. But governmental banking would do much more than this, and I am glad to find in the April number of the MAGAZINE, Mr James Middleton siding with me in the contention I have been making for years, to-wit: That the way to destroy interest is for the people, in their organized capacity as a government, to enter into competition with the banks in the business of accumulating the people's token, credit, or money, and loaning it out at a nominal rate of interest.

Mr. Middleton says:

Many attempts have been made to lower the rate of interest by statute enforced by penal laws. Such attempts have been and must be dismal failures. They increase the difficulties of the borrower, who must have, and increase the actual rate by increasing the risks of the business. The repeal of usury laws have usually proved beneficial to the borrowers.

If government must regulate the rate of interest it should loan on fixed capital at, say two per cent., and open up postal savings banks at one and one-half per cent. The rate of interest would adjust itself naturally and easily to that standard, and the poor and the wage worker would have a savings bank that would be as stable as the government itself. Kellogg, in "Labor and Capital," proposed a scheme of that nature.

I am glad to find him thus advocating the extension of the socialistic programme so as to embrace the banking business. The extortions of interest aggregate as large an amount as rent, profit and tariff combined. At this writing the private and public indebtedness of the people of the United States aggregates twenty-five billions of dollars, and it draws an average of seven per cent. interest, equal to \$1,750,000,000 annually. The reduction of interest to two per cent. would increase the consumptive capacity or purchasing ability of the people in the sum of \$1,250,000,000 annually. Think of it. Consider it from that standpoint, also remembering that a very large proportion of this interest is paid by labor for the privilege of being exploited with its own savings.

I have been considerably amused by a perusal of Mr. Middleton's spacious apology for interest, and his labored effort to prove interest to be right and just. At the risk of being anticipated in my remarks I shall endeavor to point out the flimsiness of Mr. Middleton's argument.

The basis for his contention is probably succinctly outlined in the following paragraphs from his article in the April MAGAZINE. He says:

If money were the only thing borrowed and lent, interest undoubtedly would be unknown. But so far from money being the only thing borrowed and lent, it is only one of the things, and it is chiefly borrowed as a medium to get something else.

I am a farmer. I need seed corn, potatoes and wheat; I have not the money to buy with; my neighbor has the required seed and loans it to me. I agree to pay him back after harvest with an additional amount for services rendered. That additional amount is true interest. If our bargain was a bargain between equals, what I pay him is an equivalent for services rendered. In many cases the loan is actually effected in some such way.

In many cases the one loaning the seed, machine or fertilizer takes a note for the market value of the commodities measured in money at the time the loan is effected, to be paid with an increase when the crop is sold in the fall. In such a case the rate of interest will probably be lower than in the first, as the borrower has to do the marketing.

In many cases the borrower goes to some one who has money, borrows that, then goes to the one who has the required commodities and buys for cash. At the end of the season he markets his crop and pays his note with interest.

In each of these cases the increase has come from labor and the productive forces of nature. The interest or payment for services rendered is a part of that increase over and above the original investment. It may or may not be just. That depends upon the

moral right of man to the product of his labor, and whether the interest is the result of a bargain between equals. The fact that he can pay it depends upon the increase which the productive forces of nature gives to his labor and capital.

Without such increase there would be no such thing as interest. What then I borrow is capital in the shape of commodities, and when money enters into the transaction it is as a medium to facilitate the borrowing.

A large part of interest is a premium for risk. We may not know just how much is premium for risk or insurance. The only standard that we can have is the rate of interest paid on the best securities, like government bonds. In times of panic the risks increase and the rates go up. As the panic subsides the rates diminish. Sometimes they fall below the usual rate of good times, and then rise to the ordinary rate as business revives.

So great an element is risk that there are not wanting acute economists who claim that if risk could be completely eliminated interest would disappear: that risk is all there is to interest. Certainly the rate of interest in the best class of securities shows that it is a very large element.

From the foregoing one may apprehend the fact that Mr. Middleton finds a righteous basis for interest in "the increase which the productive forces of nature give to labor and capital," and what he designates "the element of risk." This is a very peculiar position for a single taxer to occupy. If individuals may not appropriate to themselves the communal wealth inhering in land values, surely individuals may not charge others wages for the labor performed by an omnipotent God. Our Saviour said: "My Father worketh hitherto and I work." God's labor is freely performed, without money and without price, and individuals must indeed be presumptuous who charge others for God's bounties. Moreover, the presence in large numbers, of the disinherited who own no land, results in the building up of a city, and single taxers claim that the land values thus produced belong equally to those who own and those who do not own land. But the fact that an individual is upon the earth and owns a crib of corn, a bin of wheat or a cellar full of seed potatoes, confers upon him no individual right or claim to an interest in the increase given by the productive forces of nature. All individual claims must be enforced by the application of labor to the material vehicle through and upon which the productive forces of nature reveal themselves and act—our mother earth. Unlike our natural forests, wheat fields and potato patches are not the spontaneous or volunteer products of nature, but are the legitimate results of labor applied to land. It is true that seed is required, but weevil and moth eat and devour, while dampness moulds and corrodes wheat, and a potato will keep well but a single season, so that the lender of such perishable products does well to have them taken care of for a season and then returned without interest. If he receives interest he gets paid for labor performed by others than himself, or charges for God's free gift to those only who

choose to appropriate such gift to themselves by the application of labor to land. In one case he robs man, in the other he acts as an unauthorized agent of Almighty God.

Then as to the "element of risk." Who bears or runs the risk? The lender? Nay, verily! but the borrower. In western Kansas and other localities hundreds of thousands of bushels of seed wheat have been lost in an endeavor to realize "the increase given to labor and capital by the productive forces of nature." But the loss of this wheat did not liquidate the debt incurred for money with which to buy it. The borrower had to lose both his labor and his wheat. This spring a large area of oat fields and potato patches were destroyed by cold weather and untimely frosts, but those who bought seed oats or potatoes upon credit or with borrowed money, will have to pay for them nevertheless. And so it is with all forms of perishable wealth. Horses or cattle die, or are accidentally killed. Hogs take the cholera and die in droves. And as with live stock, so also with all perishable commodities. Upon all alike rests the blight of rust, corrosion and corruption, the inevitable result of the lapse of time. The value of all perishable commodities constantly deteriorates from use and the ravages of the destroying elements and decomposing forces of nature. And all this risk and loss, both possible and inevitable, is borne by the borrower, no matter if he returns payment in kind or pays the debt with money. Instead of paying interest the borrower should be paid a premium for the risk he assumes.

Broadly speaking, the rule may be laid down that the risk assumed in guaranteeing the care and safe return of capital is equal, or more than equal to the benefits derived from its use. Interest has no just, righteous or scientific basis, but is a curse and an incubus upon human effort. Interest is robbery and must be abolished. It is the borrower and not the lender who renders a service, such service being the safe keeping and return, unimpaired in quantity or quality, of the perishable capital of which he borrows the use. The borrower thus saves the lender from all the expense and labor necessary to protect and preserve his perishable capital. In the case of the farmer who borrows seed wheat, Mr. Middleton says he agrees to pay it back "after harvest, with an additional amount for services rendered." What services? Rendered by whom and to whom?

But the discussion of the "element of risk" idea opens up another avenue of inquiry. Is the single tax to be collected for realized benefits actually received, or prospective benefits which may possibly accrue? Must the farmer who loses his crop pay the

annual use-value of his land under prosperous conditions, or will he simply have to pay a tax equal to the amount of his actual benefits? There is a question for single taxers. After all, does not socialism offer the only form of government which promises to comply with the Divine injunction, "Bear ye one another's burdens?"

## LAND MONOPOLY.

BY B. C. STICKNEY.

Mr. W. H. Stuart in the May issue of the MAGAZINE avers that single tax advocates cannot answer the argument that the single tax would be of no benefit to the man without capital; that even with free access to land he could not compete with the capitalist farmer; that the man without capital would starve on free land. I would like to ask the readers of the MAGAZINE to examine that argument with me.

From the reading of Mr. Stuart's article, one unfamiliar with the subject would receive the impression that the purpose of the single tax men is to make idle agricultural land freely accessible to all who wished for it. That is so; but they have another purpose of greater importance, which is to make valuable land (city land, mining land, timber land, etc.) worthless for speculative or monopolistic purposes. They propose to put all men upon equal terms with respect to the privilege of using any land; to make it practically impossible for some men to bar out other men from using land.

It may be true, as Mr. Stuart intimates, that men with no capital would be unable to put valuable land to good use; but men with moderate capital could do it, and they would undeniably be benefited by the adoption of the single tax. At the same time it is obvious that the moderate capitalists could not put these valuable lands into use without employing men who have no capital. This would thin the ranks of idle men, and reduce the competition between workers for chances to work. Those who would thus be first to be given employment in developing land now idle, would find themselves in position to provide better and more food, clothing and shelter for themselves and families, to produce which other men now idle would be given employment. There can be no question that the mere act of throwing our valuable lands open to enterprising men would in a very short time result in the employment of every willing worker in the land; in fact, we would be offering bounties to immigrants, instead of trying to keep them out. Mr. Stuart has therefore given the land question merely a superficial examination, if he thinks that the single tax will do nothing more for the

worker than to merely give him an opportunity to use agricultural land.

Mr. Stuart says that "under the single tax, the instruments of production will remain in the hands of the capitalists, for the use of which the capitalists can rightfully claim as their wages, all the product above what unaided labor could produce on land of no value." Truly, broad is the way that leadeth to error. A man would require several days in which to cut down a tree, if he had only a sharp stone with which to do the work; but with an axe he could cut it down in an hour. Before wearing out the axe he could demolish more trees than he could cut down in a century with a sharp stone. Now, according to Mr. Stuart's notion, the man without capital would have to render his services for a century in exchange for the axe. The fact is, however, that the value of the axe depends not upon the advantage it gives the laborer, but upon the amount of labor it takes to produce the axe, which important distinction Mr. Stuart overlooks. Very little of the assistance that labor receives from tools and machinery goes or ever will go in the shape of interest. This is clearly so, because if the possessors of tools and machinery were to have such a good thing of it as Mr. Stuart intimates, nine-tenths of our population would devote themselves exclusively to making tools and machinery, whereas it is manifest that the bulk of the population must always devote its labor to producing things intended for consumption, and that only a small proportion can profitably be employed in making tools for the rest to use; and this is entirely regardless of the amount of aid such tools render to the users.

Mr. Stuart says that Henry George "admits that under a system of private land monopoly, by which labor is excluded from access to natural resources and opportunities, capitalists are enabled to retain more than they are justly entitled to." This is precisely the contrary of what Henry George does claim, for his contention is that in consequence of such land monopoly, interest is lower than it should be; and he contends that low wages and low interest go together. This is true, because, since labor produces all capital, interest on capital can be nothing but an indirect return for the labor that produced the capital; wherefore low interest, as well as low wages, means poor returns for labor. The more perfect the artificial barriers by which some men keep other men from access to land, the larger the share of wealth the land owner can obtain, and the smaller the share that goes to both laborer and capitalist.

When I say "capitalist," I of course will

be understood to exclude every variety of monopolist. A capitalist is merely the possessor of wealth, that has been produced directly by human exertion. A monopolist is a man who, by virtue of his control over something that others must use, is able to obtain their services or their wealth, or both, without rendering a fair return, or, as in the case of a land-owner, without rendering any return whatever. A capitalist is therefore broadly distinguishable from a monopolist. A man may be a great capitalist, and yet not be a monopolist, as for instance a merchant. Or a man may be a great monopolist, and yet have only a trifling capital, as for instance the owner of large tracts of valuable land. Or a great monopolist may also be a great capitalist, as for instance the Western Union Telegraph Company.

Mr. Stuart argues that "even our farming class, with years of experience, owning their own land, with considerable capital in the shape of machinery, cannot compete with the capitalist farmer, no more than the small producer of any kind can compete with his capitalist competitor." Now I submit, that when the time comes that nobody except a great capitalist can make a living, there will be no more capitalists of any sort. When all are so poor that no one can even afford to buy a newspaper, the valuable plants owned by the daily papers will be worth nothing, not even as old junk, for there will be no junk dealers, or any other small capitalists, in existence. Not only will the great capitalistic presses perish, but all other great capitalistic enterprises as well, in consequence of the same lack of purchasing power on the part of the great army of workers. Thus is Mr. Stuart's notion that under fair conditions only great capitalists can succeed, reduced to an absurdity. The fact is, that there are now, and would continue to be under fair conditions, thousands of minor capitalists to one great capitalist. It is only when there is general prosperity on the part of a large population that capital can or will be massed in productive enterprises. My remarks will be misunderstood unless it is borne in mind that I refer strictly to capitalists, and not in any sense to monopolists, for all are aware that great monopolists thrive where the bulk of the population exists in poverty. What the small farmer and the small producer have to fear is not the competition of the great capitalists, but the extortions practiced by the great and small monopolists.

Mr. Stuart's contention may well be questioned, that if a man having no capital were to be presented with a plot of farming land, he would starve on it. It is not so bad as that, for anybody who has witnessed the degraded depths of poverty

to which thousands sink in our large cities, will admit that if any one of these miserable images of the Creator were to be cast upon an uninhabited island, he would be able to provide for himself in far more comfort than it is possible for him to do as now situated. This improvement in his condition would be due to the fact that he would then have unrestricted access to nature, whereas now he has not. It should not be forgotten that America was settled by men who had no capital; that the pioneers who gradually pushed civilization's borders across the continent had no capital. Indeed, all civilized countries, so far as we know, have been settled by men who had no capital. Contrast with the hardships endured by these pioneers, the favorable conditions that would be enjoyed by the pioneer of to-morrow, were the single tax to go into effect, removing the barriers between the dense city's degraded workers and the fertile but idle square miles just without the city limits; the pioneer of to-morrow would leave the city's squalor, and would need to travel only a few minutes to find a place on which his home could be built; he would not suffer the hardships and exile of the old pioneers. When his home would be erected, it would not be taxed; nothing that he might produce would be taxed. His land would not be taxed, unless he were to occupy some especially desirable location, and even then it would be a trifling tax, no more than he ought to pay for the privilege of occupying a better spot than his neighbors. He would also enjoy the great benefits consequent to the abolition of import tariffs and other taxes upon enterprise.

Mr. Stuart is therefore manifestly in the wrong when he contends that the smallest wages offered by the capitalists at the present time are more than the laborer could produce on free land under the reign of the single tax.

But, as before pointed out, the single tax would soon cause a brisk demand for labor, and naturally nobody would take up farming unless he should desire to be his own master; and as most men prefer to be their own masters, employers would be obliged to offer better wages than farming would yield. In any case, no man would be obliged to accept less than he could obtain by working upon land free of access, free from tax, and within short distance of a market; although Mr. Stuart has so distorted this conclusion of Henry George as to make him appear to say that no laborer could get more wages from employers than he could make by cultivating the land without the aid of farming implements.

The one thing necessary is to reduce competition among all grades of laborers,

by increasing the demand for labor; and this, as pointed out, can be accomplished by throwing open the earth's resources to the men of enterprise in the community.

In the June MAGAZINE Mr. Stuart bewails the single tax men's lack of familiarity with the writings of Karl Marx. Marx said that "the monopoly of land is the basis of monopoly in capital." This is true, and professed followers of Marx should encourage the single tax men in their endeavors to destroy the monopoly of land.

#### A FORTUNE HUNTER.

In the hammock she swings in an elegant pose,

For indeed she's a beautiful creature,

From her bangs to the tips of her satin-clad toes

She's indebted immensely to nature;

Every movement she makes has been studied with

care.

She seems perfect to every admirer.

Oh, she queens it along with so perfect an air,

That a man for his bride would desire her.

She's just out of her teens! The rich tides of youth

In her veins are healthfully bounding,

Crimson lips! dimpled cheeks! perfumed breathing!

In sooth.

The still depths of one's heart she keeps sounding;

Every glance of her eyes when in tenderness sent

Thrills a chap to the depth of his nature;

And of course such effect is the hidden intent

Of this charming and idolized creature.

She is seeking a "mash," in the phrase of the day,

One possessed of position and money;

And she don't care a fig if he's wrinkled and gray,

With the cash he'll be sweeter than honey.

On the chess-board of life she is playing a game,

Every move's for an elegant marriage,

To insure her position, to bring with it fame,

Rich surroundings in mansion and carriage.

Human nature is weak, and this artful gazelle

Knows the way a rich idiot to capture;

With his wealth she will queen it and cut a big

swell.

And the fool will approve in his rapture.

Till the cobwebs are swept from the sight of his eyes,

And he sees her as others behold her;

Then, of course, he will gulp a big gasp of surprise,

But he's caught, and there's no use to scold her.

A true, innocent girl, in a calico dress,

Though as poor as Job's turkey, and willing

To remain by your side, in your joy and distress,

And to love you, though not worth a shilling,

Is better, one thousand times better, in life

Than a Juno like her I see swaying.

For she'll make one a true and a lovable wife,

And no games of deceit she'll be playing.

*Shandy Maguire.*

#### SOMETHING MISSING.

I know that she is gone away,

Because the sodden skies are gray

Instead of blue;

Because the sun shines hot and fierce,

Or else too cold and weak to pierce

The dull clouds through.

Because the thronging crowds I meet

Wear mournful faces on the street,

And downcast eyes;

The horses have a jaded look;

The sparrow chirps from out his nook

With restless cries.

I know that she is gone away,

Because each moment seems a day.

Each day a year;

Because the city lacks that grace

Which marks her mere abiding place

When she is here!

### OCEAN STEAMSHIP CHANGES OF TWENTY YEARS.

Beginning at about 1871, what is usually spoken of as the North Atlantic steamship service, has undergone a change in the size, model and displacement, and engineering and speed, and the results of this are apparent only upon a very careful comparison, and this comparison brings out very clearly the fact that these results are attained only after infinite thought and important computation, and that very much is due to the observations and records of these various experiments, and that the different competitors in the race have, without any doubt, to some extent, followed each other in very important points while having varied widely as to certain other points or considerations in the one grand aim which was to save time, and if possible, to economize the expense.

Like any other commercial scheme there is a certain element of limit beyond which these people have not passed, and there are certain other things beyond which at present they cannot pass, and like almost all other great improvements they are limited in some directions, and they must stay inside that limit with whatever they do. People who have made frequent trips across the ocean either to the British or to the Continental ports have had an opportunity to observe very much with reference to the changes which have been going on steadily, persistently and continuously. The writer has had ample time to notice all this on not only the "liners," as they are called, but on many war ships of our own as well as other governments. In 1869 eight and one-half or nine days was considered a rapid passage, from that time to this how the time has been shortened! And some of the details in connection with it have been considered worthy of putting in permanent and authentic form, it might with interest occupy several articles, but as condensation is the order we will give those particulars which will be most pertinent to the subject.

In November of 1867, the old City of Paris made, what at that time, was considered a very rapid passage, eight days, four hours and one minute. Two years afterward the Inman Co. brought out the City of Brussels, which made the passage in seven days, twenty-two hours and three minutes, and to this ship belongs the credit of being the first to come within the eight day limit. The Brussels was considered a "record breaker," but she is to day out of the race,

and is considered very slow. The Brussels was 390 feet long, 40 feet 4 inches beam, and registered 3090 tons gross. She had horizontal trunk engines, 91½ inches in diameter and 48 inches stroke, and carries steam at 30 pounds, indicated 3030 horse power, and on her best trip averaged 14 53 knots. The White Star line shortly after this brought out the Oceanic. She was the first of the new models, and what is now termed "lean," being 10½ times as long as she was wide. The Oceanic registered 3,708 tons gross; she was 420 feet long, 40½ beam and 23½ feet deep, and had two high pressure cylinders of 29 inches and two low pressures of 78 inches diameter, two cylinders on one piston rod, 60 inches stroke and carried 66 pounds of steam. She remained in the North Atlantic service but a short time and was then sent away into the Pacific service.

The Oceanic was followed in 1871 by the Adriatic, and in 1872 by the Celtic. Their measurements were 471 feet long, 41 feet beam and 3886 tons gross. They had four cylinder compound engines, two high pressure of 41 inches and two low pressure of 78 inches in diameter, 30 inches stroke, and with 70 pounds of steam developed 3,880 indicated horse power. These ships reduced the record to seven days, sixteen hours and twenty-six minutes from Ireland to Sandy Hook. From Sandy Hook to Ireland the run was seven days, nineteen hours and forty-three minutes. This record belonged to the Adriatic, the Celtic was two hours later than the record each way. The same year that this occurred saw the only effort which has been made in America during the twenty five years. The American Steam Ship Co. built four ships named after four states, and all these were put in commission during the years 1872 and 1873, known as the Indiana, Illinois, Ohio and Pennsylvania. These were built by Cramps, of Philadelphia, were 357 feet over all, 43 feet beam and 24 feet deep, 3126 tons gross. All had compound engines, high pressure 48 inches, low pressure 90 inches diameter, with 4 feet stroke carrying 75 pounds of steam, and developed about 2,000 horse power, making 14 knots as an average speed. These ships have now passed into the hands of the International Navigation Co.

In 1873 the Inman Co. brought out two new ships built by different builders, the City of Chester, 4770 tons, 444 feet long, 44 feet beam, 34 feet deep, with compound engines, 68 inches high pressure, 120 inches low pressure, with 54 feet stroke. Sixty-five pounds of steam developed 4,300 horse power. The City of Richmond, the other one of the two, had 4780 tons. These two ships were a failure as far as lowering the record went, and the Adriatic carried the pennant until the Inman Co. bought out

the City of Berlin, late in 1873. She was 499 feet long, 44 feet beam, and 34 feet deep, 5490 tons gross, two cylinder compound engines, high 72 inches, low 120 inches diameter, stroke 66 inches, and with 75 pounds of steam indicated 5,200 horse power. Her record was seven days, fifteen hours and twenty-one minutes. Shortly after this the White Star Co. made another attempt in the Germanic and Britanic. These ships were 455 feet long, 45 feet beam, 33 feet deep, 5008 tons gross. These had compound 4 cylinder engines, the two high pressure being 48 inches and the two low 83 inches diameter, each 5 foot stroke, and with 75 pounds of steam indicated 5 600 horse power. These were 16 knot ships, and the record was reduced by the Britanic to seven days, six hours and fifty-two minutes.

In 1879 the Cunard Co. brought out the Gallia, 430 feet long, 44 feet beam, 34 feet deep, her gross tonnage being 4809, with three cylinder engines, high 64 inches, two low pressure 80 inches diameter, each 5 feet stroke, indicating 4440 horse power. The Gallia did not wear the pennant. Her time was seven days sixteen hours and thirty-two minutes, or only ten hours behind the Britanic's best record.

In the same year, 1879, the Arizona was brought out by the Guion line. The Arizona was 450 feet long, 45 feet 4 inches beam, 35 feet 7 inches deep, and she had three cylinder compound engines, with one 62 inch high pressure, and two 90 inch low pressure cylinders, with 5½ feet stroke.

With 90 pounds of steam she developed 6,640 horse power, her gross tonnage being 5162. Her best record trip was seven days, three hours and thirty-eight minutes, making 16.27 knots. The Arizona carried the pennant for two seasons, or from the fall of 1879 to sometime in 1881, when the Guion Co. brought out the Alaska, 500 feet long, 50 feet beam, 38 feet deep, with a tonnage of 9500, having three cylinder compound engines, with a 68 inch high pressure, and two 100 inch low pressure. With steam at 100 pounds pressure indicating 11,800 horse power, made the trip from Ireland to Sandy Hook in six days, eighteen hours and forty seven minutes, or 17.44 knots per hour. The Alaska took the pennant, but the same year a ship building company in England brought out the City of Rome, and she was put into service by the Inman Co. One of the most exciting tests which has ever been known took place between these two ships. The City of Rome, after much struggle, obtained the record of six days, eighteen hours, which was forty-seven minutes better than the Alaska's record, and the pennant was transferred to the City of Rome. The City of Rome was 560 feet long, 52 feet beam, 37 feet deep, and her gross tonnage was 8144;

indicated horse power, 11,500. The City of Rome was unsuccessful, and after a few trips she went from the Inman Co. back to the builders, where it is said that many alterations in the engines were made, and when she went out again it was under the Anchor Line flag.

In 1881 the Cunard Co. brought out the Servia, which was 515 feet long, 53 feet beam, 37 feet deep, and her gross tonnage was 7392. She had one 72 inch high pressure, and two 100 inch low pressure cylinders, and being 6 foot stroke, with 90 pounds of steam developed 10,200 horse power, but her best record for speed was six days, twenty-three hours and forty-nine minutes.

In 1883 the International line brought out the steamer America, built on a different model. She made the time six days, fourteen hours, sixteen minutes, and a speed of 18.41 knots per hour; proving unprofitable, she was sold twice and is now in the service of Italy under another name as a transport ship. The Oregon was also brought out in the same year by the Guion line. She was 501 feet long, 54 feet wide and 38 feet deep, 7,375 tons gross. She had three cylinder compound engines, high pressure 70 inches, low pressure 104 inches, diameter each 6 feet stroke, and with steam at 110 pounds developed 13,300 horse power. She made the trip in six days, nine hours, twenty-two minutes, or an average of 18.58 knots per hour. She was in the government service and then the Cunard company's. She is now at the bottom of the ocean off the south shores of Long Island, sunk by a collision. The Aurania was brought out by the Cunard company in the same year, 1883. 470 feet long, 57 feet beam, 37 feet deep, gross tonnage 7,269. She had three cylinder compound engines, high pressure 68 inches, low 91 inches diameter, each 6 feet stroke, and with 90 pounds of steam indicated 8,850 horse power; her speed all the way was only 17.21 knots; this was the Cunard company's third disappointment, and her record was six days, twenty hours, forty-eight minutes.

In the seasons of '84 and '85 the Cunard company brought out the Umbria and Eutruria. These sister ships were 501 feet long, 57 feet beam, 38 feet deep and 8,120 tons gross, having three cylinder compound engines, the high being 71 inches and the low pressure 105 inches diameter, stroke 6 feet; with 110 pounds of steam their horse power was 1,440 and 1,460 respectively. The very best record these ships produced was six days and one to two hours as the average, however each ship made one trip a little inside of six days, and until 1880 these two ships practically gave the Cunard company the pennant, but during this time the North German Lloyds in 1885 brought out

the Aller and the Saale, and in '86 the Trave, in '87 the Lahn, all of which were built in England. The three ships are practically the same in all essential particulars, 439 feet long, 48 feet beam and 84 feet deep. The Aller registered 4994 tons, the Saale and Trave 5380, and the Lahn, which is 10 feet longer and ten inches deeper than the Saale and Trave, is 5681 tons. The three ships are very much alike in general dimensions, differing only in small details. They have triple expansion engines, with a high pressure 44 inches, the intermediate 70 inches and the low pressure 108 inches diameter, 72 inches stroke; with steam at 150 pounds the engines indicate 3,800 horse power, and their very best speeds have been, for the Aller 17.7, for the Saale 17.1 and for the Trave 18.6; the Lahn has different engines from the other three, being 5 cylinder triple expansion with 2 high pressure of 32½ inches each, one intermediate of 68 inches, and two low pressure of 85 inches each, the high and low pressure cylinders being arranged tandem; with 150 pounds of steam they indicate 9,800 horse power, and produced a speed of 18.4 knots, making a Southampton record of six days, twenty-two hours, forty-two minutes, which is equal to a Queenstown record of six days, seven hours, thirty minutes.

In 1890 the North German Lloyds brought out two more steamers, the Spree and the Havel; they have not, however, changed the record. In the seasons of 1889 and '90 the Hamburg company brought out four steamers namely, Columbia, Normania, Augusta-Victoria and the Furst Bismarck. Two of these are English built and two are German. The Columbia, 463 feet 6 inches long by 55 feet 6 inches by 35 feet, 5 inches, her gross registered tonnage 7363; she has twin screws driven by 3 cylinder triple expansion engines; high pressure 41 inches, intermediate 66, and low pressure 100 inches diameter, by 5 feet 6 inches stroke, and with steam at 150 pounds indicates 14,600 horse power, making 19.15 knots per hour the whole way, and is equal to a Queenstown record of six days. The Normania is 500 feet long, 57½ feet beam, 34 inches deep, 8250 tons; she has triple expansion engines, high 40 inch, intermediate 67 inch, low 106 inch, 5 feet 6 inches stroke, and with steam at 150 pounds developed a little over 15,000 horse power; her best passage has shown a speed of 19.33.

The Bismarck and Victoria are 502 feet 6 inches long, 57½ feet wide, 38 feet deep, with a tonnage of 8874; have triple expansion engines, the high pressure is 43½, the intermediate 66½, and the low pressure 106½ inches diameter, the stroke is 5 feet 3 inches, and they indicate 16,800 horse power, and are equal to a six days record.

During the years 1886 and '87 three

French ships were built, their speed being equivalent to a Queenstown record of six days, four hours, thirty-three minutes.

*Thomas Pray, Jr.*

#### FACTS AND FIGURES.

The Interstate Commerce Commission has just finished its sixth statistical report, and with the usual (?) dispatch made in getting out official reports we find this one a year behind, as it brings its figures up to June 30, 1893.

The total mileage of railways in the United States at the close of the year embraced in the report was 176,471 miles, being an increase of 4,897 during the year, or over 1,740 miles more than was built in the preceding year. This shows that there was a revival in railway building, although the miles added do not come up to the high tide figures of years ago when as high as 15,000 miles were built in a single year. It is stated that nineteen roads were abandoned during the year, and as there is an increase of mileage the presumption is that enough new road was built to make up these miles of abandoned road and leave a net increase as above given. The total length of line is given at 230,137 miles; 10,051 miles being second track and 42,043 miles being yard tracks and sidings. The proportion of double track is thus about 1 in 17 miles of road, and of yard tracks and sidings 1 to 4 miles of road.

The number of locomotives in service June 30, 1893, was 34,788, being an increase of 1,652 during the year. Of these, 8,357 were passenger locomotives, 18,599 were in the freight service, 4,802 were in the switch service, and 2,430 are unclassified, being probably the gravel and other work train locomotives. These locomotives require about 350 miles of track to stand on, and would thus form a solid line across the state of Pennsylvania from Philadelphia to Pittsburg. Again as many locomotives develop power enough to move themselves and have as much as 400 horse power to spare for useful effect it would require more than 13,000,000 horses to equal the work done by these locomotives, and as we have only about that number of horses in the United States, it would take all the blood and flesh horses to do the work done by these "iron horses," and even then we should not be able to get the speed we are now having, and it would not leave a horse for any of the thousands of uses to which that animal is now devoted. A little reflection on these figures will cause us to wonder how the world would get along without locomotives, and as if to emphasize these reflections we are in receipt of news that hundreds of locomotives are now standing idle for lack of the controlling mind and guiding hand, and the whole country is becoming paralyzed and its in-

dustries are at a stand, and it is only a question of time to produce actual distress in one section of our country from the lack of communication with other parts upon which they are dependent for supplies.

The total number of cars owned by the carriers making report was 1,119,873, to which should be added 154,068 leased cars, making a total of 1,273,946 cars operated directly by the carriers. This shows an increase in the number of cars directly controlled of 58,854 during the year. Of the total number of cars, 31,384 were in the passenger service, and 1,047,577 in the freight service, leaving about 195,000 cars as unclassified or belonging to the gravel or other work trains.

One year has thus added nearly 5,000 miles of road, nearly 1,700 locomotives, and nearly 50,000 cars to the railway service of the country, and these additions themselves afford work and sustenance to an army of workers, for they represent about 200 millions of dollars, or enough to pay 300,000 men an average of nearly \$700 per year, and taking five persons to the worker as a basis furnishing support to a million and a half of our population.

The number of passengers carried per passenger locomotive was 66,268 and the number of passenger miles per passenger locomotive was 1,588,601. These figures show an increase in the efficiency of passenger locomotives. The number of tons of freight carried per freight locomotive was 40,062, and the number of ton miles accomplished per freight locomotive was 5,031,889. These figures show no change in the efficiency of freight locomotives as compared with previous years. It is to be doubted whether there was any gain in efficiency in the passenger service locomotives, and a lack of advance in the same line with the freight service, because of these figures, for they only prove that some of the passenger trains were more crowded than before and thus increased the passenger mileage, while the freight hauled did not increase or keep pace with passenger traffic.

The total number of employees in the service of railways on June 30, 1893, was 873,602, being an increase of 52,187. Of this total of employees, 35,384 are assigned to the work of general administration, 256,212 to maintenance of way and structures, 175,464 to maintenance of equipment, and 397,915 to conducting transportation, the remainder 8,627 being unclassified. We have then nearly 900,000 railway employees which, with their families represent about four and one-half millions of persons, and with the army of construction and equipment gives us about six millions of our people directly dependent upon the railway service for their support, or nearly one in ten.

The vast army of railway employees and the multitude deriving their support from

them makes the following part of the report of deep significance and thrilling importance to all, but especially to those whose nearest and dearest ones are constantly exposed to the dangers incident to a life on the rail.

The number of railway employees killed during the year was 2,727, being greater by 173 than those killed during the previous year. The number of employees injured was 31,729, being greater by 3,462 than the number injured the previous year. The number of passengers killed during the year was 299, being less by 77 than the number killed during the previous year, and the number injured was 3,229, being two in excess of the number injured the previous year. Of the total number of deaths to employees on account of railway accidents, 433 were due to coupling and uncoupling cars, 644 to falling from trains and engines, 73 to overhead obstructions, 247 to collisions, and 153 to derailments, the remainder being due to causes not so clearly defined. An assignment of casualties to the opportunity offered for accidents shows one employe to have been killed for every 320 men employed, and one to have been injured for every twenty-eight employed. The most dangerous service is that of trainmen, and for these the statistics show one employe to have been killed for every 115 trainmen, and one employe to have been injured for every ten engaged in this service. A similar comparison shows one passenger to have been killed for each 1,985,153 passengers carried, or for each 47,588,966 passenger miles accomplished, and one passenger injured for each 183,822 passengers carried, or for each 4,406,659 passenger miles accomplished.

One railway employee killed each year out of 320 employed!

One injured each year out of twenty-eight employed!

One trainmen killed out of 115 employed!

One trainmen hurt out of every ten employed!

And yet with these dread facts ever before them, many would like to forbid these men to organize for mutual protection and for relief in case of injury or to bring temporary comfort to the home made desolate by a death at the post of duty on the rail.

Let us not pay any heed to their behests but continue in our line of duty as marked out by our order, protecting ourselves from injustice and inflicting none on others, practicing charity in its broadest sense, living in strict sobriety (not only while on duty but also when off duty) and working industriously both at our calling and to propagate the principles of our order and we shall have the reward of knowing that we have done our duty, which in itself is the greatest satisfaction a person can enjoy.

*William Weiler.*

## NOTES.

*Locomotive Engineering* expresses some disappointment with the designs offered in its prize contest, because there was so little that was new and in for consideration. It reports that "there was nothing new of value offered, but the combination of good devices and the arrangement of them was admirable in many cases." It is somewhat interesting to note that a locomotive fireman, Fred M. Wescott, of Toledo, Ohio, presented a drawing which is spoken of as being "by long odds the nicest piece of work of all those offered and was highly complimented by the committee." As Mr. Wescott's work came in direct competition with the work of many professional draughtsmen, it speaks well for the fireman. Mr. Wescott captured the second prize for eight-wheelers, fifty dollars, and would have taken first prize but for "doubts about the inside closing check and locating the air pump too high." Mr. Wescott is employed as a fireman on the Wheeling & Lake Erie railroad, and he learned all he knows about drawing at the manual training school at Toledo. The first prize design calls for checks on the boiler-head inside the cab, and an open pipe carries the water up toward the front end of boiler. This seems to be the greatest departure from ordinary practice that appeared in either of the other designs so far presented, and for my part I fail to see much value in it. I don't believe I would want a check buzzing in my ear all the time; I would take my chances on an inside closing check up at the front end of the boiler and feel better satisfied.

It seems there was an almost unanimous sentiment in favor of the compound expressed at the compound "experience meeting" held by the master mechanics at their recent convention. One of the M. M.s seemed to hit the feeling of the great majority pretty accurately when he expressed his belief that the compound "is the coming type of engine for freight service in this country." Another said: "We have had two compound engines for the last twenty months, and I would like to add my testimony to that of the other gentlemen in favor of the compound engine for freight service. We all know there are about a dozen devices, each of which will save about 10 per cent. on the locomotive, according to the statements of the people who sell them. The compound system is the only device I have seen applied to a locomotive which saves coal every week in the year and we are fully satisfied with it." One of the experiences presented was that the trainmen liked the compounds, because in their use "there is almost an entire absence of dirt and sparks." It was remarked by one

member that the M. M.s have a great deal to say against the compounds outside, but very little in the meetings. When the system of rating engines according to the number of tons hauled, instead of rating them by car loads, comes to be generally adopted, and there seems to be a strong sentiment in that direction now, we shall have a stable basis for comparison of that much vexed question of economy, and there will be no chance for further argument in that direction.

The *Boston Transcript* describes an electric locomotive now under construction in that city. The machine follows closely the lines of steam locomotives, and it is hard to see where the advantage is going to come in. "The cylinder is lengthened and has in its interior a series of armatures which are so energized as to draw the piston alternately from one end to the other, the driving axles being provided with commutators to change the direction of the current. The current may be received in any of the ordinary ways." There may be something in this mode of applying electric power for locomotive purposes that does not appear on the surface, but if the new machine does not turn out to be another candidate for the scrap pile, I shall miss my guess.

The Eleventh Annual Report of the Michigan Labor Bureau deals extensively with the condition of the railway employees of the state, and forms an interesting study; particularly interesting are the remarks of individual employees in response to requests for their views on the labor situation. One section man put the whole wages question in startling clearness in these few words:—"Eight in family makes twenty-four meals per day, or 720 meals per month. Wages, \$32 per month, less \$7 for rent, leaves \$25 a month; so meals must not cost over three and one-half cents each. No books, no clothes, no wood, no coal, no beer." The whole story of dreary, hopeless, disheartening toil could not be better presented in a whole volume than it is presented by this poor section man, here, in a few words. One baggage man says: "I work fourteen hours a day and am paid \$30 a month. The company requires me to buy two uniform suits a year." Another reports six in family and says "it is hard work to live like Americans on \$35 a month." There is not much complaint among the firemen, but the operators and agents complain bitterly of the conditions surrounding them, and it will be admitted that the operator who says "the general tendency in all railroad work is to increase the amount of work and lessen salaries" speaks no more than the truth. One fact developed by the canvass, and it is a

fact that the commissioner regards as worthy of special notice, is that only about 21 per cent. of the railway laborers of the state are organized.

\* \* \*

There seems to be a sentiment among the railroads, openly expressed since the Pullman strike, towards making a united and determined effort to break up all railway labor organizations. The B. of L. F., O. R. C., B. of R. T. and S. M. M. A. organizations on some roads have been notified that contracts with them will no longer be recognized, because individual members of those orders in some instances went out through sympathy with the A. R. U. Other instances are numerous where members of the A. R. U. have been given the alternative of renouncing their membership in that order or losing their jobs. In fact, the war on labor unions will be prosecuted in the present period of depression more vigorously than ever before, and the war will be carried on under government auspices. Those who doubt that the government will not exert its power to crush labor unions may read the following extract from a Washington dispatch. The language is attributed to Attorney General Olney, and he is talking about the anti trust law—a law which he has frequently declared to be unconstitutional:

"Some people said I never did anything under this law," he exultantly remarked to a western senator. "Well, I have found a use for it few expected, and a good use, too. I'll break up every labor union in this country before we are through, for I will make every strike the basis for locking up every man who counsels or is concerned in it before it is begun."

The idea of the railway managers seems to be to supplant the present organizations with some sort of a paternal arrangement which shall be under the administration and control of the railroads. Will employees permit them to accomplish their object? I think not.

W. P. Borland.

#### The Proper Definition of Clearance.

MR. EDITOR:—We notice that our definition of clearance in a cylinder has brought forth criticism from Mr. Parshall, and in his attempt to correct us he has given a definition very misleading indeed, and in fact it is no definition at all. We have no correction to make in the definition that we gave, and of course the steam port is also taken in with, and is called clearance space. That will no doubt be conceded. We will give the definition of clearance as some of the locomotive experts give it, and let the readers judge for themselves as to the proper one to take, our definition or Mr. Parshall's. Here is what Mr. Forney, who is the greatest locomotive expert in this or any other country, says of clearance:

"When the piston of an engine is at the

end of its stroke there is always some space left between it and the cylinder head, so that there will be no danger of the one striking the other. The distance between the piston and cylinder head at the end of each stroke is called the clearance."

Here is another definition from Mr. Forney: "The clearance of a piston is the space between a piston and the cylinder head when the former is at the end of its stroke. If the piston touched the cylinder head at the end of each stroke it would cause a concussion or thump which would injure those parts. Owing to the impossibility of constructing machinery with absolute accuracy it is therefore necessary to leave a space usually from one-half to one-fourth of an inch wide between the piston and the cylinder head, so as to be certain that they will not strike each other should there be any slight inaccuracies in the length of the piston rods, main rods, frames or other parts."

Here is a definition from another locomotive expert: "The interior length of the cylinder bore from cover to cover is always a little longer than the stroke, plus the thickness of the piston, so that a small vacant space called the clearance is invariably left at the end of each stroke."

The above is from Holmes, in his Text Book of Science. We could give more definitions from different authors, but as they all mean the same, only some worded different, it would no doubt be useless to give any more. Mr. Parshall could have gotten a better definition of clearance than he gave by simply looking at the April issue of *Locomotive Engineering*, page 140.

Another point in Mr. Parshall's letter we wish to call the reader's attention to is where he says that all first-class engine builders, when economy is the object to be attained, etc. Did Mr. Parshall ever see a first class engine builder that did not aim for economy? If they failed in economy it was not because they did not want it, it was due to an error in construction. Here is where the indicator can be applied. As you say, the clearance must be reduced to a minimum, but you cannot do away with it entirely.

We again call the reader's attention to the latter part of Mr. Parshall's letter, where he says: "Concisely stated, clearance is the space from the piston, engine on center, through steam ports to valve face." Now right above his definition he wants to know what has the position of the valve and steam ports got to do with clearance. We did not mention anything about valves and steam ports in our definition, although when the clearance space is filled with steam the steam port is also filled. Your idea that you advance in regard to disconnecting an engine would be very poor in-

deed, in this locality. When you break down on the road the proper thing to do is to try and get out of the way and not block the road by standing around and looking at your break down. Your method might do on some small road where there were only two trains daily, one each way, and only one engine; the train in one direction has the absolute right of track over the other. Then if you broke down you could have all the time you wished, as the other train could not come out until you got in to bring it out. Where, if you break down in this locality, by the time you got stopped and located the trouble there would be another train behind you. Now-a-days your present foundation depends upon what you are doing, and not what you have done. It makes no difference to the company you serve, whether you have run on twenty different roads or only one, you are rated upon what you are doing at present. In conclusion I will say that at some future date I will present to the readers of the MAGAZINE some indicator cards taken from some of the fastest passenger engines in this country.

\* \* \*

There is no doubt but that many persons are under the impression that back pressure and compression are the same, and for the benefit of those under that belief we will try and point out the difference.

Back pressure may be stated as pressure which opposes the movement of the piston by the live steam. Compression is the pressure caused by the closing of exhaust port before the end of the stroke, and increased ahead of piston as it nears the end of stroke. Back pressure takes place while the exhaust port is open; compression occurs later in the stroke, beginning when the exhaust is closed, and ending when the port is opened to give the lead.

The action of steam in a locomotive cylinder are pre-admission, or more commonly called lead, admission, expansion, exhaust, back pressure and compression. There is just as much difference between back pressure and compression as there is between pre admission and admission. Pre-admission takes place before the piston arrives at end of stroke, and admission takes place after the piston leaves the center, and the movement of piston marks the distinction. Back pressure and compression both are present during the same movement of piston, but the valve marks the line where back pressure ceases and compression begins. So long as compression does not rise above boiler pressure it is a benefit and saves steam by cushioning the piston and its connections at end of stroke. There also seems to be a belief among many that lead is given to a valve to cushion the piston at the end of stroke. I know of nothing more

absurd. Lead is given to a valve to secure full boiler pressure, if possible, and also to obtain as large a port opening as can be had just as the crank passes the center. If lead was given to a valve in order to cushion the piston at the end of stroke, in addition to compression, as so many believe, there would be too much compression, and too much compression, especially in high speed engines, is worse than not enough.

Waller C. Garaghty.

BALTIMORE, MD.

MR. EDITOR:—In regard to the question asked by T. I. Weldon, it is necessary to have a large grate area to burn coke as the flame of coke is very short there is little, if any, difference in front end arrangement. It is also a good plan to take both front and back dampers off. The P. F. W. & C. R. W. have engines in service in the Alleghany yards that burn coal or coke according to place the engine is assigned to. If your engine does not cut her fire lower the flash pan in the front end until you think it adjusted properly. In reply to Mr. Willis as to breaking a side rod on an engine where the eccentrics were on one axle and the main rods connected to another, if you break a pin on lead driving wheel I can not see why she is a dead engine as several brothers have already styled her. If your eccentrics are in proper shape and valves the same take down side rods then sand your rail good, start her slow and carefully, and do not let her slip; if she does not start off O. K. I am a Jonah.

Some few months ago I saw an engine in the same condition so having the opportunity myself and several others thought we would experiment a little and after doing the aforesaid we run her about 900 yards. But, if a like occurrence should happen with me on the road I would have her towed to the shop, for it would be very risky business to haul a train with her, that is providing the engine would slip, for the test we made was with the light engine.

ALLEGHANY CITY, PENN. W. J. Edwards.

#### Questions and Answers.

We clip the following questions and answers from *Locomotive Engineering*:

J. F. W., Terrell, Texas, writes:

My engine is cutting right back driving flange. The engine is in perfect trim and runs a little too much to the right in front. Can you propose a remedy? A.—There are so many things which may cause an engine to cut certain flanges of driving-wheels that no general directions may be given. When a back driver is cutting, it can often be remedied by throwing the head of the engine to the same side, but in the case submitted the head of the engine is said to

be running to the same side as the driver that has the cutting flange. We would conclude from this that the engine was low on the right hand side. It might, however, be that the driving-wheel which is cutting is smaller than the one opposite to it, and it might be that the driving-box brass was worn thin or the front truck out of true. All these causes must be taken into consideration and the real cause of the defect judged accordingly.

A. S., Dennison, Ohio, writes:

I was hauling a freight train of twenty-one loads with a Class R consolidation engine, the engine fitted with Richardson valve, with relief cock in steam chest. When running down a grade, at a speed of 35 or 40 miles per hour, the driving-wheels revolving only at the rate of about 15 miles per hour, I had to use steam two or three times to keep the engine from locking her wheels. The engine was in the forward motion, and full stroke, brakes and everything free. A.—We cannot account for this, unless there was so much friction somewhere that the engine could not keep up. Might it be possible that you were mistaken—seems impossible to reconcile with any known laws.

G. A., Princeton, Ill., writes:

I notice in railroad papers that experience in increasing the travel of locomotive valves and adding lap makes a smart engine, but wasteful of fuel—that is for a 6 or 6½-inch valve travel; while a 4 or 4½-inch travel acts to make an engine logy but economical of fuel. I notice this opinion was given by the S. M. P. of the Old Colony road and others. If this is so, there is a reason for it. What is the reason? Please explain why should merely increasing the travel of valve tend to burn more coal? A.—The only explanation we have heard of the above is that long travel gives quick opening and closing of valve, creating a jerking or uneven draft on the fire that was detrimental.

E. E. M. D., Delaware, Ohio, writes:

An engine came in with the receiving-valve of the Westinghouse air-pump stuck, and the discharge-valve heated so much that the pipe leading to main reservoir became red hot. Please explain the cause of this? A.—The pump piston kept churning a small volume of air, and the work done by the piston was converted into heat. Compressing air or any other gas always generates heat, but its effects are not perceptible when the compressed medium passes away with small resistance.

J. A. P., Vichy, Ill., asks:

1. In what position should an engine be to test the blowing of valves with the lever in the center? A.—Top or bottom quarter.

2. With engine on her quarter and lever on center, will steam go through cylinder cocks or through exhaust, if valve is blowing? A.—To exhaust, and possibly to cylinder cocks if blow is strong. 3. With the lever in center, can engine be placed in any position where steam will come out of one cylinder cock on each side? A.—With a right-hand lead engine, the lever in the center, and both cranks ahead of the axle, it is possible for the valve on each side to open the port the amount of the lead.

G. R., Chicago, writes:

Firebox side sheets are generally  $\frac{1}{8}$ -inch thick for all kinds of locomotives. We have engines carrying 130 pounds of steam and others carrying 180 pounds, all with the same thickness of side sheets. Now what I want to know is, if  $\frac{1}{8}$ -sheet is right for 130 pounds pressure, is it not wrong for 180 pounds pressure? A.—The thickness of sheet named has been found to be about right for water that contains scaling ingredients. A thicker sheet is more liable to crack. When the pressure is raised the same strength can be secured by putting staybolts closer.

Reader, Waukesha, Wis., says:

Mention was made in *Locomotive Engineering* a short time ago of thermo-pile. I have looked up several mechanical books to find out what kind of an instrument it is and cannot find anything about it. Will be glad to get some light through your columns. A.—The thermo-pile is part of an exceedingly delicate heat measuring instrument first brought to popular attention by Professor Tyndall in his lectures on "Heat a Mode of Motion." The pile is made up of pieces of metal having different magnetic properties, such as bismuth and antimony.

W. W. H., South Bay, Maine, asks:

How many locomotives can Baldwin's turn out in thirty days, and how long does it take them to make a locomotive boiler? A.—About ninety engines per month. Time required to build a boiler depends on what is ready in the shape of material. If an odd boiler was asked for, it might take two or three weeks; if material was on hand one might be completed, from start to finish, in five or six days.

C. A. M., Erie, Pa., asks:

What is meant by the factor of safety of a boiler? A.—The factor of safety is the entire strength which the boiler possesses to resist rupture. If a boiler is to carry a certain pressure, say 150 pounds to the square inch, it ought to be made so that the weakest part is capable of standing a pressure five times as great. This being done, the factor of safety is said to be 5.

**Air Brakes with Link-and-Pin Couplers.**

At the last meeting of the New England Railroad Club, a short discussion took place on the efficiency of power brakes on cars equipped with link and-pin couplers. The following is the substance of what was said:

Mr. Lauder: I have heard railroad men occasionally discussing the question whether it was possible to operate the Westinghouse airbrake on cars with the link-and-pin coupler, ignoring the fact that it has been done on thousands of cars and hundreds of trains for the last 15 years. I think some six years ago the Union Pacific road gave the Westinghouse Air Brake Company the largest order they ever had at one time, for 9 500 sets, almost half a million dollars. They furnished their entire equipment at that time, and I suppose all their new equipment since, with the power brake. I don't think the Union Pacific road has anything to-day but the link and pin coupler. And the Southern Pacific also, with its heavy grades, far worse than anything in New England, for the last 10 or 15 years, have handled their trains with perfect success with the air-brake and the old link-and-pin coupler.

Mr. D. W. Hunter: I would like to ask Mr. Lauder if he would approve the use of the Westinghouse air brake or any power brake with the link-and-pin coupler?

Mr. Lauder: I should most certainly; I would approve the use of the air brake with any of the existing couplers, and there is no question that it can be so used. We have on our road operated the air brake with freight cars for ten years with as good success as on our passenger trains. The rigging sometimes gets disordered, and the parts worn, but with ordinary care of the rigging the air brake can be used with any type of coupler we now have. It operates better, however, with the vertical plane coupler.—*National Car and Locomotive Builder.*

The following is contributed to us by Mr. H. L. Clark, Atchison, Kan.:

I claim that the fireman is the one who should pump the engine, and I will try to convince enginemen that I am right.

When leaving a station with the boiler full of water, and the engineer doing the pumping, a good fireman is always worried to know just when the engineer will put his injector on. The fireman does not want to waste any coal, and it takes very little coal to keep steam up, but the fire must be hot when the injector is started to hold the steam. It often happens that when the injector is started, the fire is in no condition to receive it and the steam soon drops back. To regain the steam, the fireman must crowd his fire, which often results in leav-

ing a bank, and a waste of coal.

If the fireman is indifferent as to how his coal record is, and only tries to keep the engine hot, to be safe he will keep up a heavy fire, and then hold the door open or let the engine pop. As some engineers keep the boiler full all the time, this happens at every station, and in going over the division considerable coal is wasted.

But when the fireman does the pumping, then there is a great change; he becomes a better 'bov,' and takes more interest in his work. There is not so much to worry him. He can gradually work his fire into the proper condition, and when it is time to start the injector he has a hot fire to receive it, and has not wasted any coal.

The most successful firing I ever did was when the engineer allowed me to pump the engine on a local passenger train. The injector on my side would not quite supply the engine when working her hard, and the engineer would occasionally start his injector just before shutting off for a station and regain the water that was lost. But on level track the injector would just supply her, and it was a pleasure to fire the engine she steamed so well.

There is another thing about the saving of coal that is not given the attention it deserves by some engineers, and that is about getting out of town. To show the injustice that is practiced on the firemen and the company by some men, I will relate an incident that I will swear to.

I was once unfortunate enough to fire for a man who had a notorious habit of slugging an engine when leaving town. He would pull the throttle wide open, and when going about fifteen miles an hour he would pull the lever about half way up the quadrant and leave it there until the speed was too fast, and then hook her back and commence easing her off on the throttle, very often going to the next town and wait for time. This man took a lay-off, and the engineer who was put on in his place saved coal enough in a round trip to more than pay my wages, and in a run of 140 miles against a strong wind he made up thirty minutes.—*Locomotive Engineering.*

**Rapid Evaporation in Locomotive Boilers.**

Considering the tremendous rapidity with which locomotive boilers convert water into steam, it is surprising that the accident of burned crown-sheets is so exceedingly rare. We know of nothing which forms a better testimony to the care and vigilance of the average locomotive engineer. Everybody who has had experience in the cab of a locomotive is well aware how rapidly the water disappears if anything happens to prevent the injectors working, but very few people have seen actual figures of the tremendous evaporation going on. Mr.

Sanderson, of the Norfolk & Western, speaking on this subject some time ago, gives figures that will be interesting to most of our readers. He said: "Several years ago, when they had some engines burned owing to the carelessness of engine-men, they made experiments with one of their engines, which has a boiler 60 inches in diameter, has 1,774 square feet of heating surface, and 31 square feet of grate area. The quantity of water evaporated when one safety-valve was blowing off was twelve gallons per minute; when both safety-valves were blowing off the rate is doubled. When the engine is working moderately, the feed water is used up at the rate of about forty-four gallons per minute. When the engine was working hard on a hill, the evaporation rose to seventy-seven gallons of water per minute. The last figures represent measurements taken when the safety-valves are closed, so that if the engine is working hard on a hill, and both safety-valves blowing off, the water would be going away at the rate of eighty-nine gallons per minute. This represents nearly 1 inch in the water gauge per minute so it can readily be seen how little time there is for a crown sheet to get exposed when anything has happened to stop the feed-water supply.—*Locomotive Engineering*.

#### To Solder Aluminum.

For some time it was asserted that aluminum could not be soldered readily, and quite recently a reporter for a New York paper wrote a whole column upon the subject, as he had discovered an obscure French chemist who had the secret of soldering aluminum, for sale for \$50. As a matter of fact there are a dozen different mediums for soldering the metal in question, and here are some of them:

(1) Unalloyed pure tin, melting point 250°; (2) tin 1,000, lead 50, melting point 280° to 300°; (3) tin 1,000, zinc 50, melting point 280° to 320°; (4) tin 1,000, copper 10 to 15, melting point 350° to 450°; (5) tin 1,000, nickel 10 to 15, melting point 350° to 450°; (6) tin 900, copper 100, bismuth 2 to 3, melting point 350° to 450°. The first three do not color aluminum, and can be used for ornamental and artistic objects. Four and five are yellowish in color, but have the advantage of higher melting point and greater strength and hardness, and suggest the possibility of using aluminum for various articles and purposes for which hammered, coated or enameled iron, tin plate, copper, zinc, lead, etc., are now used. The *Journal of the Society of Chemical Industry* says the last alloy can be made to assume any tint of yellow by varying the proportion of copper, and is, therefore, suitable for the soldering of

aluminum bronzes; the proportion of bismuth is adjusted so as to keep the melting point suitable for the use of the soldering iron.—*The Engineer*.

#### German Locomotives.

Mr. G. Lentz, in a recent address before a German engineering society on locomotive design, said that the German and other continental locomotives are modeled after both English and American designs, with the result that a mixture of the features of both is found in them; the practice of later years, however, following rather more closely the lines of English builders. But the inside cylinders and crank-axes of the English engine have not found favor, at least not in Germany, where sharper curves are permitted than in England. and where, therefore, numerous crank-axle failures have led to the adoption of outside cylinders. Compared with the English locomotive, the American engine does not commend itself in appearance to Mr. Lentz's tastes; there being as he puts it, less beauty of design in its make-up, while in many cases it is embellished with flourishes and needless ornamentation which give it an unrestful air. The English builder, on the other hand, aims at the utmost simplicity and turns out an engine solid and clean cut in appearance. Next to the English engines in the order of merit, so far as appearance is concerned, Mr. Lentz places those of Belgian make, in which inside cylinders largely prevail. Crank axle fractures, however, occur in large numbers with these, notwithstanding the fact that their design provides for an extra bearing for these axles.—*American Engineer*.

At the recent meeting at Detroit of the Association of Railroad Telegraph Superintendents, Mr. M. C. Selden of the Baltimore & Ohio read a paper upon the subject of the telephone in railroad service. The objection made to the telephone in comparison with the telegraph, that there would be no written record, is answered by Mr. Selden. He calls attention to the fact that the ordinary telegraph instrument gives no written record, and that the element of personal fallibility is present in its use; and that if a telephone message is written before sending and spelled out, as it should be if of importance, the receiver will have ample time to write it out while receiving it, and records are thus preserved at both ends of the line. In matters of less vital importance the telephone offers advantages which can not be approximated by the telegraph. The Pennsylvania, Lehigh Valley and New York Central systems have already established telephone service between many principal stations.—*Railway Age*.

For some years after the extension smoke-box for locomotives first appeared there were numerous patents obtained for combinations calculated to improve the box as a spark arrester, or to perform some real or imaginary function which the common arrangement failed in. This line of invention led to the wasting of money by people ill able to afford squandering their means on patent office fees, and it fell into innocuous desuetude for a few years, but the infection to improve smoke-boxes is spreading again. Half a dozen patents have been taken out within the last month for the improvement of the locomotive smoke-box. We only hope that the inventors will be more fortunate than their predecessors. Railroad companies are not ready to spend money on draught obstructors these days. They got too many lessons when the period of fearful and wonderful smokestacks of the kind that trainmen, for good cause, called ice-cream freezers, was passing. The man who promises to save 20 per cent. of fuel by an improved smoke-box is sure to get left. Superintendents and master mechanics will not listen to tales of that kind.

—*Locomotive Engineering.*

A CURIOUS incident was related by Mr. Jacob Johann, superintendent of machinery of the Chicago & Alton, in remarks made at a Western Railway Club meeting. Mr. Johann said that for thirty years he had followed the practice of giving valves inside clearance instead of inside lap with beneficial results. He went on: "I took up that subject in 1863 with Mr. Hudson, superintendent of the Rogers Locomotive Works, and begged him to send me engines with inside clearances and he declined to do it. We corresponded about three months and he still persisted in having his  $\frac{1}{4}$ -inch inside lap. The road I was with was not very solid financially, we were buying engines with paper, so I could not stand upon my dignity about having the engines just as we wanted them. I finally dropped the subject, and as fast as the engines arrived at my shops the valves were taken up and fixed as I wanted them. When changed they would take two more cars over the hill than they would when they had the inside lap."

—*Locomotive Engineering.*

A RAILWAY station indicator, which is worked automatically by means of a lever projecting underneath the carriage in position to strike an inclined plane upon the track upon approaching a station, has recently been put into service upon an English railway. The indication is by means of a card bearing the name of the station, and a small bell to call attention to the change.

—*Locomotive Engineering.*

BURLINGTON engine No. 26 built at the company's shops at Hannibal has made a remarkable record in the matter of continuous service and small cost of maintenance. It came out of the shops June 23, 1892, and was returned May 20, 1894, being out of the shop, therefore, one year and eleven months or 697 days, during which period it was only idle seven days. It ran during the period 149,665 miles. During this period it consumed 5,069 tons of coal, 10,203 pints of oil, of which 7,612 were used for lubricating purposes. It therefore ran 29.52 miles to one ton of coal. This engine hauled, during this time, trains 15 and 16, which are the fast night Denver trains, and trains Nos. 13 and 14, consolidated St. Paul and Denver trains between St. Louis and Hannibal. These are the two heaviest, fastest and most important trains of the system. No accident of any kind happened to this engine causing any delay. This is especially interesting at this time in view of the report to the Saratoga convention of the Master Mechanics' Association of the committee on "cost of maintaining locomotives."

—*Railway Age.*

A WILKESBARRE, PA., inventor is claimed to have solved the problem of preventing boiler scale by means of a cartridge which when placed in the boiler has the power of attracting to itself the oxygen in the water which otherwise would attack the metal. Tests are described by a local paper in which polished steel plates were placed in vessels of water, one with the cartridge, the other without, and left for a week. The plate in the plain water came out badly rusted, while the one in the "doctored" water was perfectly bright. Tests with salt water under the same conditions, are alleged to have given the same results.

—*Railway Age.*

A PECULIAR improvement on the link motion has been patented by Mr. William B. Warren, Peoria, Ill. It consists in placing the eccentric rod-pins at different sides of the link. The forward eccentric rod is pinned at the back of the link in the usual way, and the back-up eccentric is pinned to the forward side. The pins are so located that a straight line connecting their centers passes through the center of the hanger pin.

—*Locomotive Engineering.*

It is announced that as one result of the recent investigation of armor-plate frauds at Carnegie's, the board will recommend that "in future mechanical engineers and not sailors be selected to inspect government material," the inspection having been, up to this time, mainly by engineers who have returned from sea voyages.

THE capital stock of our railways on June 30, 1893, was \$4,668,935,418, of which \$2,859,334,572 or 61.24 per cent. of the total, paid no dividends during the year. Only 5.32 per cent. paid as much as 7 per cent. dividends, only 5.24 per cent. paid from 6 to 7 per cent., only 11.62 paid from 5 to 6 per cent. and the remainder had less than 5 cent. if it had anything at all. The bonded debt amounted to \$5,225,689,821, of which \$697,141,268, or 13.3 per cent. paid no interest. Evidently the investors in railway securities, representing millions of people whom the labor agitators are wont to denounce as the capitalistic classes, are receiving very small returns on their money. Moreover bonds and stocks to the value of many millions of dollars are annually wiped out of existence by financial failure, involving principal as well as interest in the calamity. People whose savings are thus wiped away are in many cases more entitled to sympathy than those whose wages have been reduced by hard times—certainly to more sympathy than those who are offered good wages and not only refuse to work but try to keep others from working also.—*Railway Age*.

REPORTS say that the Williams Palace Car Company, capitalized at \$3,000,000, will begin the construction of cars in St. Joseph, Mo., to compete with the Pullman and Wagner companies. There is a saving of weight in the Williams car of 5,000 pounds. The berths will be a little longer than those in the Pullman and Wagner cars and about the same width. They will be arranged in about the same manner with upper and lower tiers. The rack upon which the mattresses will rest will be made of aluminum inclosed in a case of wood and will fold up in the same manner that an accordion does, and be deposited in the wall of the car in a space of one and seven-eighths of an inch thickness. Upon these frames will rest mattresses made of cloth and rubber, which will be inflated with air immediately before being put in use. In the summer chilled air and in the winter warmed air will be used. These mattresses, together with the bed clothing, will be stored underneath the seats when they are not in use.—*Locomotive Engineering*.

THERE must be something more than common about the powers exercised by the coal strikers who have lately been tearing up railroad tracks, destroying bridges and playing havoc generally with railroad property. A morning paper dispatch lately went on to tell that a band of strikers blew up a railroad frog with dynamite and with fiendish deliberation burned up the fragments.—*Locomotive Engineering*.

General passenger agent Daniels has published a list of unclaimed baggage and parcels that have accumulated at the stations of the New York Central road in one year, which furnishes remarkable evidence of the carelessness of the traveling public. The list, which is about two feet long, closely printed in fine type, with abbreviations to designate various articles—B. T. for black trunk, R. T. for russet trunk, R. V. for russet valise, etc.—comprises hundreds of articles, such as trunks, handbags, boxes, baskets, umbrellas, boots and shoes, rubbers, coats, gossamers, books, a bicycle tire, canes, and bundles, packages and parcels of all shapes and kinds—including three boxes of cigars, which we are expected to believe have remained within reach of the baggagemen, unsmoked, for more than a year. The number of stupid people who leave their belongings in the cars and stations is astonishing, and still more astonishing is the fact that so many articles of value are never claimed.—*Railway Age*.

The most encouraging feature in the railway outlook just now is the general change of sentiment on the part of commercial and legislative bodies in regard to the pooling of competitive traffic. More than twenty boards of trade of large cities have passed resolutions favoring the proposed bill legalizing such pooling, under oversight of the inter-state commerce commission. Many of the strongest opponents of the plan, like ex-senator Reagan, now favor it, and there is no doubt that the bill will pass both houses of congress in a few days. With competition thus regulated, temptations to discrimination removed, and steadiness of rates insured, the railways and the public will alike be benefited and the era of destructive rate wars will, it is hoped, be brought to a speedy close.—*Railway Age*.

THE number of railway corporations in the United States at last report of the inter-state commerce commission was 1,890, of which only 752 were independent operating roads, although 939 maintained operating accounts. Of the 1,138 subsidiary companies 778 maintain financial accounts, being leased or operated under traffic agreements, the remaining 360 apparently having only a nominal existence. Consolidation is still going on, though upon a small scale of late, and there are now 42 companies which operate more than 1,000 miles each, their mileage aggregating 98,385 miles, or 55.78 per cent. of the total mileage of the country; but there are 902 companies which represent 250 miles or less each, and 90 others which operate between 250 and 500 miles. So the great majority of the railway companies are still small.—*Railway Age*.

## WOMAN'S DEPARTMENT.

EDITED BY IDA A. HARPER.

Letters for publication should be directed to Mrs. Ida A. Harper, Stanford University, California.

### SUMMER TRAVELS.

SANTA CATALINA ISLAND, July, 1894.

When I had my last monthly chat with the readers of the MAGAZINE, I was at what seemed to me the loveliest spot in California, but, in a state so abounding in beautiful places, as does California, one hardly dares give the palm to any one. The more one sees of it, the more readily he can excuse the Californians for their pride in its wonderful resources. If one summer anywhere west of the high mountain ranges, he will never experience an uncomfortably hot day. If he like the sea coast, there are as many miles of it as from New York to Florida, and it is thickly dotted with pleasure resorts, ranging from the simplicity of tents on the shore, to elegant hotels with all the modern conveniences. If he prefer the mountains, he may make his choice from three different ranges, and here also, among their almost inaccessible heights, he may live in a hotel or a cabin. He may betake himself to a ranch and lie under the trees while the ripe fruit drops into his mouth, or he may go to the city and revel in the delights of metropolitan life. In California one may find any kind of climate, scenery, people or mode of living that he happens to desire. It is, in truth, a state of magnificent resources. It must also be admitted that its deserts are just as barren as its valleys are fertile, that an immense amount of soil is wasted on mountains, and that, in many places, there are more boulders to the acre than in any other spot on the globe.

From Coronado Beach we went over into the heart of the San Bernardino valley, where I visited an old schoolmate who lives on a big fruit ranch near Redlands. The pretty town of Riverside has been described so often as to be quite well known; San Bernardino, the county seat, is a thriving place, but, to my mind, Redlands is the banner town. To one who is not acquainted with the possibilities of California, it would seem incredible that there could be such a development in the space of half a dozen years. It is in the heart of the orange district and the center of a great deal of wealth. There are no end of beautiful homes, with spacious and handsome grounds. "Smiley Heights," the winter home of two New Yorkers, represents an expenditure of \$100,000, and there are many others quite as attractive. The valley is like a great bowl surrounded by mountains, and yet it is itself 1,500 feet above sea level. It is the highest, dryest

and warmest place in Southern California, and is a paradise for invalids. A great deal of capital is attracted there through people who have made their fortunes and want a mild and equable climate in which to spend the remainder of their days. It seems as if they ought to live forever in such an atmosphere, but the cemetery shows that Death also has found this salubrious spot.

If I were asked what is the most remarkable thing I have seen in California, I should answer, "The system of irrigation." A river flows where it is of no benefit to anybody. Man, who wants this river for his own purpose, turns it from its course, and, by means of flumes and pipes, carries its rushing waters wherever they are needed. He goes to the top of the mountains and turns the springs and streams into great reservoirs where the precious fluid is stored for future use. There is in this locality, and extending for many miles across the state, a clear, swift stream of water called the "Zanja," pronounced "Sankey," the entire channel of which was made by Indian women more than a hundred years ago. I was impressed especially, while here, with the danger of buying land in California without seeing it. There may be one tract rich and fertile and admirably adapted for fruit growing, and directly across the road another which never could be made to yield, or if at all, only after a fortune had been expended on it; and right here, in this most fertile locality, are hundreds of acres so thickly covered with huge boulders that they are utterly useless for all time to come.

It was here that we were caught by the "strike." While sitting on the veranda, in the cool of the evening, with our trunks all packed for starting the next morning, some friends drove up with the information that not a train was running. Our visit was ended, our plans made for the future, it was getting hot, and there was every reason to believe the delay would be prolonged. Two days afterward, however, we were able, by going five miles down the road with a "dummy" engine to meet the last overland from off the desert, which brought us to Los Angeles. From there we came by the "Terminal," the only road which was not "tied up," to the coast, and taking the steamer, reached Santa Catalina, in safety, very glad indeed, to find so comfortable and delightful a spot.

Here we have remained several weeks, growing more in love with the place every day. How I have wished that all the weary and worn might come here for awhile and rest in the arms of Mother Nature. And yet, if only a small proportion came, we should run the risk of being crowded off, for there is but a small foothold here. Such a unique place, the top of a mountain ris-

ing out of the water and forming an island in the midst of the Pacific Ocean, thirty miles long and from one to eight miles wide, and consists wholly of mountains and canyons. The latter come down sharply to the water's edge, but at the southeastern corner, one of these canyons broadens out, forming a gentle slope of perhaps six or eight acres; and here the little village of Avalon has sprung up, only five or six years old, but destined to a long life, if an earthquake does not swallow up the island some fine day, as is frequently predicted. Avalon consists merely of hotels and boarding houses, groceries, drug stores, curiosity shops, ice cream parlors and a big dance pavilion. Many pretty, private cottages cling to the mountain side, but the greater number of people who summer here, live in tents. These tents are well built, divided into rooms, carpeted and furnished, and it is really an ideal way to live in this warm, dry climate. There are places where one can buy hot soups, meats and vegetables, and the bakeries are excellent. There are, however, good hotels and boarding houses for those who cling to the conventionalities of life.

The little bay forms a perfect crescent, calm and lovely, and the cove is sheltered by the mountains from the strong ocean winds. They rise up almost perpendicularly on all sides except that which looks out over the broad, blue Pacific. It is a most beautiful spot, where art has done, can do, nothing to assist nature. The only amusement after nightfall is to wander by the shore and listen to the music of the waves, or, if this grow monotonous, to drop into the big pavilion and watch the merry dancers under the inspiring strains of the orchestra. By day, camping parties form and go up into the mountains in search of quail, prairie chickens and wild goats. Other parties go out for a day's fishing and almost without exception, come home laden with bass, mackerel, barracuda and the big jew-fish, some of them so large that a man cannot carry more than one. There are hundreds of little row boats, dancing in the sun, sailing vessels, steam launches and many beautiful yachts. Bathing is the most popular form of entertainment and there is always a merry crowd in the water, kicking, splashing, shouting and performing all sorts of antics, some of them, it must be admitted, a serious offense against modesty and good taste. The young people are fond of mounting the burros and following the mountain trails, but older people find rather too hard work in this kind of fun. The trot of a burro is as bad as a case of sea-sickness, which is the very worst that can be said about it.

What we enjoy above all else are the

beauty, the rest, the quiet and the unconventionality. No steam whistles, no clanging electric cars, no stony pavements, not a sound except the shouts of children and the murmur of the waves. We may put on one plain dress in the morning and wear it all day without any infraction of the proprieties. Sometimes we climb to the top of a mountain peak and watch the sun drop into the deep waters. Most of the day we sit upon our veranda, which overlooks the ocean, so near we could throw a stone into the waves, and read and write and sew, watch the panorama spread out before us, and revel in the delicious air. There is never a hot and never a cold day, always sunshine and a fresh breeze, and on either hand, the mountains and the sea, of which one never grows tired. When we see the moon rise up over the high peaks and shine down in a broad, white, endless path along the dark waters, we say again and again, "Never will we forget Santa Catalina." It would be a pleasure to remain here all the rest of the summer, but there are many interesting places in Southern California which we hope to see before the end of the season sends us back to work; and, so in a few days, we shall have to say good-by.

#### EDITORIAL NOTES.

Three weeks away from books and magazines and all newspapers, except one daily which discusses nothing but the "strike," without even her correspondence, how is the editor to make any notes on current events? From the two states which we have been watching lately with considerable interest, New York and Kansas, I have had no news for a month. What the New York constitutional convention has done with the "woman question," I cannot tell. Early in June a large number of distinguished women appeared before the committee on suffrage in the assembly chamber and several very fine addresses were made, which were received with great courtesy and attention. I wish it were possible to reproduce them here, especially that of Dr. Mary Putnam Jacobi, a celebrated physician. It was an argument for woman suffrage, so strong, so logical, so comprehensive, that one cannot see how it could fail to convince. A petition was presented to the convention the first of June, signed by 300,000 persons over 21 years of age, residents of New York, asking that the suffrage be granted to women. In addition, there was presented the endorsement of over 100,000 members of various labor organizations, who had approved the petition in their meetings and sent this official statement properly signed. These petitions, doubtless, have been largely increased since then. It was shown that, in the city of New York, women pay taxes on \$300,000,000 of prop-

erty, and in the state outside on considerably more than that amount. Compare this with the amount that brought on the revolutionary war against taxation without representation. The statement being continually reiterated that the majority of women do not want to vote, they have asked that the women of the state may be allowed to vote on the amendment to give women the ballot, and thus let the matter be proved in the only way possible. The probability is that the convention will refuse everything they ask,—and then the opponents will keep right on saying that when women want the ballot they can have it.

• • •

No news has been received from Kansas since the Democratic state convention. It was not expected that it would adopt a woman suffrage plank. Although some of the county Republican conventions declared for equal suffrage, the state convention refused to do so. Able addresses were made by Miss Anthony, Rev. Anna Shaw, Mrs. J. Ellen Foster, Mrs. Laura M. Johns and others, and a memorial asking for the suffrage, to which was attached many yards of signatures was presented, but the convention ignored the question. It is believed that a very large proportion of the Kansas Republicans are in favor of woman suffrage, but they are determined to regain the state from the Populists this fall, and, in order to do this, they must conciliate the liquor vote and the foreign vote, both of which are strongly opposed to giving the ballot to women. If women themselves could vote they would not have to go pleading before conventions, only to have their claims utterly rejected. In the Populist convention the committee brought in a majority report against equal suffrage, but the convention took up the minority report and passed it by a vote of 337 to 269. The office-holding element did everything in their power to defeat the amendment, but it is well understood that the Populist party favors equal suffrage. The question of extending full suffrage to women will be voted on by the male half of the people of Kansas next November. There is no man so ignorant or so degraded, in that state, but will have his vote on this question, while the mothers and wives will stand back, powerless, awaiting the decision.

When I wrote last month I had not been able to get a report from the convention of Working Girls' Clubs, held in Boston. The delegates represented 180 clubs, composed of stenographers, dressmakers, milliners, book keepers, saleswomen, operatives from the mills, and wage earners in various occupations. The sessions continued for near-

ly a week and were universally commended for their dignity, harmony and strict observance of parliamentary usage. They were devoted chiefly to a discussion of practical questions, profit-sharing, trades-unions, domestic service, matters of finance, etc. Reception were given by the wives of the Lieutenant-governor, the Mayor, Mrs. Louis Agassiz, and other well-known people. The convention was addressed by Hon. Carroll T. Wright, U. S. Commissioner of Labor; Mrs. Alice Freeman Palmer, Dean of Chicago University; Dr. Wm. J. Tucker, President of Dartmouth College; Mrs. Ellen H. Richards, of the Boston Institute of Technology, and many other distinguished persons. The greatest interest, however, was felt in the addresses and reports of the delegates themselves, coming as they did from various parts of the country and from many ranks of life. The *Boston Woman's Journal* makes the following significant comment:

To one whose eyes are weary with the accounts in the press of the gathering of the numerous clans of Coxey's army, with the reports of the desperate words of anarchists, and of the severe arraignment in labor and Populist conventions of the plutocracy of wealth and the corruption of government, and whose soul has been harrowed by descriptions of the unemployed of both sexes as ground between the upper and nether millstones—the fact that an assemblage of working women held three days' session without airing any grievances, and without passing any resolutions of condemnation, seems amazing. There were discussions of hardships and of unjust conditions, but without bitterness, and with a remarkable appreciation of both sides of the question.

It should be, indeed, the mission of women to bring not a sword but peace into the world. There was a very strong feeling in the convention in favor of the co-operation of men and women in all the work of the times. Opinions were expressed both for and against the suffrage for women. It was a noteworthy convention. The organization of clubs of wage-earning women, the uniting of these clubs into one federation, and the coming together annually for the full and free discussion of subjects of mutual interest and for personal acquaintance, are movements of importance and worthy of commendation.

Here is an incident that I came across this summer. I was attracted by the intelligence and good manners of a girl who waited on me at the table, and, after awhile, I learned her story. She and her friend, a bright refined girl, who waited on the adjoining table, are natives of Canada. One was a type writer and one a dressmaker. By the hardest kind of work they managed to pay their board, the rent of one room and to dress plainly. They had no leisure, no vacations, and the close confinement affected their health. They were anxious to see something of the world, and finally they formed a plan and put it into

execution. By close economy they saved enough money to take them to Boston. Here they secured a position in a hotel, one as chambermaid, the other in charge of the linen room. When the World's Fair opened, the proprietor paid their way to Chicago and put them in a hotel there. They saw the fair thoroughly, and, at its close, they had saved enough money to bring them to Southern California where, with their recommendations, they had no trouble in securing hotel service. They have had a year here, seeing as much of the country as possible, and next winter they will enter service in San Francisco. By next summer they expect to have saved enough to visit their relatives in England. They have worked fewer hours than at their old occupations, the exercise has restored their health, they have had the advantage of travel, they have dressed better, and they have saved money. They have every evidence of being girls of excellent character. There is no question but that domestic service is better paid than most of the occupations in which women are engaged. If it were possible to get a class of women to go into it who would place it on a higher plane, it would be much more to their advantage than to drag out their lives on the starvation wages they receive behind the counter and at the needle, simply because these occupations are considered more "respectable."

Mrs. Z. E. Hearsey, of Baton Rouge, La., is described as a most successful business woman. She has a large book store and controls the sale of New Orleans papers in her city, employing thirty newsboys. She also carries on an extensive trade in floriculture, and supplies the market with the choicest of flowers. Both of these branches of trade are eminently suited to women. Let us hope the day is at hand when a greater number of women will go into business for themselves, and thus enjoy an independence which is never possible when one is dependent upon a salary paid by some one else and likely at any time to be lessened or withdrawn.

One of the greatest organizations of women in the world is the Woman's Liberal Federation, of England. A number of years ago a tory organization was formed in that country, which, out of compliment to Lord Beaconsfield, was called "The Primrose League." The women in the Liberal party then formed their Federation, which has become a recognized political power. Lady Aberdeen, who is known to Americans through her enterprise at the World's Fair, the "Irish Village," which made \$100,000 for the Irish peasantry, has been the presi-

dent. Previous to her election Mrs. Gladstone was president. At their recent annual meeting, Lady Carlisle was elected to this office. She is probably the ablest woman, in political life, in England, which is noted for its able women. In her opening address she declared that in this most truly democratic society there was not one more democratic than herself. The Federation is composed of about 400 large associations, they have plenty of funds and take an active part in the political campaigns. Their work at the next general election will be to secure candidates who favor full suffrage for women. There is a strong sentiment in favor of it among both parties, but neither of them is at present strong enough to make it an issue. Women in England have all now but the Parliamentary suffrage. There is something in this for American women to reflect upon.

Illinois has a very efficient state factory inspector in Miss Florence Kelly. In her first statement, recently presented to the Governor, she says she found, in five months, 6,576 boys and girls under 16 years of age, in 245 establishments. This does not include hundreds who were discharged because they were under 14. This shows an utter disregard of the law on the subject. Miss Kelly's task has not been an easy one, as she would have been forcibly ejected from many of the factories if she had not proved that she had a legal right to make her investigations. Women are especially fitted for a work of this kind, having a keen eye, a persistence in obtaining information and a sympathy which will not permit them to be turned aside from their purpose.

At the 75th annual convention of the Episcopal diocese of Maine, there was a long and vehement debate in regard to permitting women to vote at the parish meetings. It was finally carried in the affirmative by a vote of 21 to 18. There seems to be no doubt of the ability of the women to do most of the work in the parish, but when it comes to a question of allowing them to vote on matters directly connected with the parish,—oh, dear, no. What a dreadful thing this vote is, to be sure.

The British Woman's Temperance Association are about to make a new experiment in reforming inebriate women. They will be taken to an industrial farm and provided with agreeable outdoor occupation, fruit growing, poultry raising, gardening, bee keeping, butter making, &c. In the winter they will have sewing, knitting, lace making, cooking and other indoor employments. They will have pleasant surroundings,

moral influences, and their intemperance will be treated as a disease. Undoubtedly, so long as they remain here there will be great improvement, but when they go back to the city, with its pitfalls of sin on every hand, it is more than probable that their poor, weak, diseased natures will be unable to resist the temptations. Perhaps, some day the good and intelligent women will get a fair, fighting chance at these dens of vice, that stand wide open, embellished with all that is attractive and protected by law and public sentiment. As the situation is now, women are permitted to do all that they desire to take care of the unfortunate victims, but are deprived of all power to remove the causes which bring them to ruin.

Reading that Madame Marie Barg, of Louisiana, has received an award from the World's Fair authorities for orange, reminds me of a personal incident. In the Florida building at the fair, where they were selling orange cider, was a large placard asking that each one should write in a big register on the counter his opinion of the beverage. While I was draining my glass my mischievous brother, who was with me, wrote, "The best drink sold on the grounds, and I have sampled all of them," and signed my name!

A worthy citizen of Glasgow, Scotland, on a recent visit to Paris, was horrified to see in the show windows some bicycle dresses for women. Since his return home he has been carding the papers, exhorting the Scotch women to "beware of these devilish accoutrements which were designed by Satan to lower the moral tone of women." Isn't it funny how perfectly familiar men seem to be with the intentions of both the Lord and the devil when they wish to enforce their own opinions in regard to the things that concern women?

Mrs. Julia Josephine Irvine, M. D., who has been appointed President of Wellesley College, is a graduate of Cornell and also studied for several years in Switzerland, Italy and Greece. She has been for some time a Professor of Greek at Wellesley. She is a daughter of the late Dr. Mary F. Thomas, of Richmond, Ind., one of the earliest woman-suffragists on record, and for many years President of the Indiana State Association. It will be found that there are many distinguished children of these "strong-minded" women.

The English parliament recently discussed a bill to restrict the sale of firearms, and one of the provisions of which was that no dealer should sell a pistol to a married wo-

man. The reason for this was explained by one of the noble lords to be that the temptation to kill their husbands would be too great, and that the opportunity should not be put in their way!

#### *Woman's Dress and Rights.*

I think Mrs. Miles is very much mistaken when she says women try to pattern after men when they put on a short dress. They do it for convenience, health and comfort. And I can say this in vindication of the general good sense and politeness of men, that I was never shabbily or disrespectfully treated by them while I wore the short dress. But if anybody turned up their nose at me it was a woman. We hear of man's inhumanity to man, but if we tell of woman's inhumanity to woman we are speaking a gigantic truth.

And why should women vote? Because it would be only an act of justice, after all. She is just as much human as a man is, and it is being demonstrated daily that she is not inferior to him, only as regards physical strength, and I think she has as much right to vote as to go to church or eat her dinner. How is a woman that is unmarried to have sons to vote? And because she remains unmarried is she to be denied the liberty of free speech? It seems to me that the word "male" ought to be stricken from the constitution as regards voting, and I sincerely hope and pray that it will be, and then will the stars and stripes float over a really free and happy people.

*Rosette Ramsdell Churchill.*

#### **WHEN HEARTS SHOULD HOPE.**

TO MRS. CARRIE MITCHELL, KEITHSBURG, ILL.

When every day is crowded full of joy,  
And in our hearts love sings a roundelay,  
And friends seem near and true, and no alloy  
Commingles with the gold of our fair day:  
Then hope smiles, for the future glows  
With promises of every good to be,  
And in the garden of our life, the rose  
Of happiness is beautiful to see.

But should fate bring misfortune to our door,  
And bid no ray of hope to enter there:  
And cast long shadows on our peaceful floor,  
Our lives to dim with sadness and despair:  
'Tis then that hope, bright star from Heaven sent,  
In woman's heart triumphant rises high  
And clouds of anguish and of doubt are rent  
By light divine, that reaches from the sky.

'Tis well to rest in hope at dawn of day,  
But oh, the faith that shineth in the night,  
Not only leads its own serenely on the way,  
But helpeth countless others to the light.  
So friend, thy sunny spirit, thy sweet soul,  
The faith that guides where others hopeless stray,  
Will some day bring thee to a brighter goal,  
With blessings following upon the way.

*Marietta Hedra.*

Miss Elizabeth Banks will publish a book which will endeavor to show that domestic service is preferable to shop or factory for women.

*Our Moneyed Aristocracy.*

Without making much fuss about it a large number of foreigners of rank and title are visiting American friends at their summer residences and otherwise "looking around" at this country and its institutions. Passing by some of these strangers' criticisms on the present state of affairs, it is amusing to note the surprise the mode of living here creates in intelligent minds accustomed to much simpler forms of wealth at home.

Count Nynpsche, a German friend of Prince Hatzfeldt, who married the daughter of C. P. Huntington, expresses the liveliest astonishment at such an establishment as the Huntingtons occupy for other than royalty. He says there is no luxury or magnificence to compare with that seen in private houses in America anywhere from the Atlantic to the Pacific, and his opinion is echoed by foreigners of other nationality as well as by our so called English cousins.

A well known lady, who has made Berlin her home for many years, returned to her native land last spring to find such an Aladdinlike change that she says it has almost made her silly. "No one in Germany, at least, dreams of the extent of this moneyed aristocracy." She paused. "I hate that phrase, and withdraw it! But it surprises me to see luxury where I left mere comfort only twenty years ago. The emperor is not housed half so well as some of my acquaintances in their summer places." The frugal German appears to be most touched by American progress in the weird art of living up to a big income.

*Playing in the Garret.*

"There is one delight," said a man who was reared in a small town, "that I suppose many children born in great cities never know, and that is the delight of playing in the garret. Many city children, to be sure, have relatives in the country or in smaller cities or towns whom they have visited, who live in houses with garrets, and these know something of the delights of the garret, but there must be many city children who never even heard the name.

"For myself, I remember well a garret to which I used to climb in rainy weather up a steep and narrow flight of stairs. It was warm and rather stuffy in the garret, but the rain made music on the shingled roof and the garret itself was full of treasures. There was room, to begin with, space to move about in, though you needed to look out a little for the timbers in the sloping roof. There was a sawing from the two beams, and we used to swing and swing in that and never got tired of it. There was a chimney up through this garret, a great, big, friendly chimney, and we used to play tag around

that chimney until we couldn't run any more. There was a great lot of old magazines, and these were an unfailling source of delight. There were old books in queer type and with strange-looking pictures; there were queer old hair covered trunks with round tops, studded with brass-headed nails. In these trunks and around in the garret were curious, old-fashioned men's clothes and the most extraordinary gowns and capes and hats of women; not fancy costumes, but the real things, such as they actually wore many years ago, and looking stranger than anything you could hire at a costumer's. We used to drees up sometimes in these old, old things and parade around in the garret and have great times generally, and so forget ourselves in the delights of the garret that the very world itself looked strange when we came down stairs and back to it.

"What is there in the big city that takes the place of the garret?"—*N. Y. Sun.*

*A Woman Horse Dealer.*

There is a woman horse dealer in Idaho. She is in partnership with her father and two brothers. The firm owns a horse and cattle ranch in the Bruneau valley. At home this young woman goes about and buys horses. Her judgment on a horse is said never to fail. When the shipping season comes she leaves the ranch and goes east with her stock. She plans her visitations to certain cities, travels in the caboose of the train which hauls the horses and is treated with all respect. From city to city she goes, and is a very successful horse dealer. There is no reason why she should not be successful, as she is quiet and unobtrusive, attends to her own business and has her own bank account from which to draw.

*To Fill Up Floor Cracks.*

If your kitchen or other floor that you do not wish to carpet shows unsightly cracks, try the following receipt for them: One pound of flour, three quarts of water and a teaspoonful of alum and make a paste of them, cooking well together. After removing it from the stove stir into it a lot of paper that is torn in small pieces and let it soak, stirring as much as you can. The paper should be stirred until it is all in a pulp and the mass is so thick that it is difficult to stir longer. Apply it to the cracks—be sure the floor is freshly cleaned first—and force it in, smoothing it off even with the surface. Leave it to dry thoroughly and you will find that it is more lasting and a great deal cheaper than putty. This can be painted right over as though it were wood.

SEPTEMBER, 1894.

### THE FOURTH OF JULY.

Mr. Samuel J. Nicolls, in the *Globe-Democrat*, of July 4th, has a paper captioned, "Thoughts for the Fourth," and starts out as follows:

The Fourth of July, by unquestioned right, stands first among our national holidays. The great event which it commemorates must ever make it dear to all true Americans and lovers of liberty. Usually it has been celebrated with not a little boasting over our manifest destiny and our favored condition as a free people. But whatever we may think of our future as a nation, it would be idle to attempt to disguise the fact that the return of Independence Day this year finds us in a condition that excites distress and alarm among all serious-minded men. Our industries are prostrated, trade is paralyzed, capital is unemployed, labor is full of unrest and discontent, and hope for better times through long delays is sick and weak. There is a serious apprehension felt on all sides with reference to greater evils to come; nor can there be any relief until this apprehension is removed. Some urgent questions must be settled, and settled promptly and finally, before there can be a return to prosperity. It is indeed a most serious time with a people when they begin to distrust themselves and their institutions. Two things are especially manifest to all, and they are signs of evil import. One is the prevailing lawlessness of the times. In this respect our present condition furnishes a sad contrast with earlier periods in our national life. One of the distinguishing characteristics of the American people in the past has been their respect for law. Intelligent visitors from the Old World, where force plays such an important part in the preservation of public order, have observed this characteristic, and writers like De Toqueville and Prof. Bryce have mentioned it to our praise.

The 4th day of July, as a national holiday, commemorates an event which ought to be very dear to American workingmen opposed to oppression, robbery and degradation, because it was a day on which the people—at least a large majority of them—decided to strike against the laws, the au-

thority, the government of England.

Prior to July 4th, 1776, the colonies were full of agitators. They defied courts and their injunctions. They flung defiance into the very teeth of the British king, his generals and his soldiers. There was riot and bloodshed, battles, defeats and victories. Washington and his compatriots were denounced as anarchists, nihilists, rebels and traitors. Upon the heads of Hancock, Adams, Washington and others a price was set, and if they had been caught they would have been unceremoniously shot to death or hanged. The Declaration of Independence recited the cause of the great strike for liberty. The authors of the strike *knew* there would be great inconvenience to the people of the colonies, that trade and commerce would be crippled; that untold sacrifices and sufferings would result, but the *leaders* did not heed such ravings. There was a principle involved, and they *struck for a principle*, and, moreover, these patriotic strikers started out early to enlist sympathy for their righteous cause. They wanted money, they wanted troops, they wanted ships of war, and France sympathized with the heroic, patriotic strikers, gave money, men, fleets, munitions of war, and by virtue of such sympathy and aid Washington eventually won the strike. At that time there were thousands of Tories in the colonies, despicable creatures who denounced the strike for liberty and independence, they denounced France for her sympathy and aid, and the colonists, who fought and suffered and bled and died were denounced as anarchists, traitors, enemies of their country and their countrymen. It was the greatest strike on record, and as a result of the strike conditions were greatly improved, a new nation was born, and England learned and the world learned that the strikers were not anarchists; that they were simply opposed to bad laws but were in favor of good laws, of good government, of being sovereign citizens instead of subjects and slaves, that they were opposed to degradation, and that their shibboleth was, "Give me liberty or give me death."

The strike of which we write began 118 years ago and continued about eight years, or until 1784, and from that day to the

resent, the American people have kept alive and vital the spirit of independence. They love liberty and hate tyrants. It does not matter to them who the tyrants are or what methods are employed to crush them, they will not yield their rights, their liberties, their independence and go down to degradation without a struggle. It is as Grant said "The American way."

We have no eulogies for old King George, but it is doubtless true, and easily demonstrated, that the American people now are confronted with enemies indefinitely more infamous than was King George and his advisers. Mr. Nicolls says:

But the outlook to-day reveals something widely different. Within the last ten years there have come among us those who are professedly anarchists. They are the avowed foes of all government, and are earnestly laboring to bring society into that disorganized and debased condition in which there shall be no law save that which seems best to each man. The murderous spirit which recently, through the hand of an assassin, struck down the chief magistrate of France, animates the bosoms of thousands in our own land. Nor is this spirit of lawlessness confined to those who openly declare that they seek the destruction of society. It is to be seen among those who would be indignant if classed with anarchists, but who, nevertheless, upon one pretext or another, combine to defeat law, in order to carry out their own selfish purposes. They organize to carry out their own ends, irrespective of the legal and social rights of others. It is simply anarchy in organized form, paradoxical as the statement may seem. Sometimes we see it among capitalists, who cloak their oppression and robbery under the disguise of law. Again, it is in the world of labor, where the laws that secure the rights of all are defied in the interests of an organized society.

We do not doubt that there are anarchists in the United States, and that some of them have been imported, the most of them by a class of capitalistic employers who, disregarding justice and the welfare of the state, have raked the ranks of the most degraded localities of Europe for men who would work for less wages than were demanded by Americans, preferring to employ anarchists rather than patriotic workingmen, and yet, all of these imported Huns, Dagoes, Slaves and Poles are not anarchists, and if they have been transformed into enemies of law and order, the employees who sought to degrade them more than when they landed upon our shores, are responsible. But the writer is unfortunate when he refers to the assassination of Carnot as indicating the spirit of

imported workingmen. Booth, who assassinated Lincoln; Guiteau, who assassinated Garfield; Prendergast, who assassinated Mayor Harrison, were not importations, but native assassins—anarchists, if the term better expresses the infamy of their acts.

Anarchists, wherever found are the outgrowth of conditions; necessarily so. They are the effect of a cause, as, for instance, President Cleveland said the wide spread demoralization in finances and industries which began in 1893 was chiefly owing to congressional legislation. In this we have the cause. Multiplied thousands of idle, hungry, ragged, desperate men is the effect, not the only effect, because such conditions produce or are likely to produce, anarchists. It does not matter in what country or under what form of government the conditions exist, the effect, while human nature remains as it is, will be practically the same. As, for instance, if the republic of the United States of America was Russianized, the mere fact of calling it a republic will not prevent nihilism. Arbitrary, despotic tyranny will produce anarchists. Bad laws enacted, under cover of which, courts, governors, and presidents issue despotic decrees which crush the masses and protect plutocrats, trusts and corporations, will now, as certainly as in 1774-84 produce rebellion. There is always a limit beyond which, if arbitrary power is exerted, the consequences will necessitate martial law, which being no law at all, will be anarchism. True, the military power may restore order, but liberty will have taken to itself wings and will have flown away.

The grand old 4th of July, as a national holiday is a thing of the past. That men are "created equal" is denounced as a vagary, the hallucination of a diseased brain, and the "inalienable rights of life, liberty and the pursuit of happiness" have been relegated to the limbo of shams. Court injunctions spread out over the land like shrouds. The club of the deputy marshals and the rattling discharge of guns proclaim that the sacred institutions of the country are in peril; only plutocrats are happy as they behold the power of the government exerted to protect them in their piracies and spoliations.

Mr. Nicolls puts in a plea for labor; indeed it has become fashionable for writers and speakers to express a great deal of sympathy for labor. They deplore the degradation of the masses—shed tears at the wails of the idle, the starving, the ragged, homeless victims of oppression are wafted on every wind that blows over the country—in fact, endorse strikes and declare them good things to have, but when the strike inconveniences the public and the plutocratic pirates who are responsible for the strike, then, in that supreme hour, *presto!* the strikers become anarchists and to shoot them down as if they were coyotes, is applauded to the echo.

No fair-minded man can help sympathizing with the wage-earners, who constitute the large bulk of society, in their efforts to secure themselves from the oppression of capital, and to obtain a fair share in the goods of this world. Undoubtedly many disabilities rest upon this class, and there are limitations which make their lot, at times, no enviable one. Those who are more fortunate in the possession of material wealth would be most selfish indeed, and untrue to what is best in our common humanity, if they failed to show to the great mass of the wage-earners their sympathy; or to aid them in their struggles to ameliorate their condition. But while this is true, it does not follow that we should permit our sympathies to blind us to the dangers and wrongs of many well-meant, but misguided, movements in the world of labor. Within the last few months a civil war has been existing in some seven or eight states of our Union, and is now being carried on. There is a widespread and formidable insurrection against law now existing and actively propagated. This state of affairs has been plausibly disguised under the name of "strikes." A strike in one aspect of it is a perfectly proper and lawful affair. No one can question the right of one man or ten thousand to quit work, provided they have filled their contracts to their employers; and, furthermore, I do not hesitate to say, that there is something sublime and worthy of admiration, when thousands of men quit and choose to suffer hunger and privation in order that wrongs done to some of their number may be righted, or that those who have wronged them may be compelled to do them justice. If strikes were confined to this limit, no one could find fault, and no one need dread them, save selfish oppressors of the poor. But, unfortunately, strikes as they now exist, are very different things from this ideal one. They are movements that destroy the peace and subvert the social order of communities, Municipal, county, and even state authorities are helpless in the presence of the violence they inspire. They have no hesitancy in arraying themselves against national authority, and only submit in the presence of superior force.

In 1776 when the 4th of July became a national holiday the supreme idea was lib-

erty, liberty as the patriotic colonists, not the Tories and traitors, understood the term. In 1894 the battle cry, not of Tories and traitors, but of patriotic wage-earners, is wages—for without honest wages comes poverty, degradation and slavery, hence the strike, "something" the writer extols as sublime and worthy of admiration, until some one is inconvenienced, then troops are called out, not to protect but to overwhelm the men fighting for breath and bread, for wives, children and homes.

Surely, the 4th of July, 1894, was not a day for rejoicing. Millions of men's hearts, like muffled drums, were beating funeral marches to the graves plutocrats were digging to bury the hopes, aspirations and liberties of workingmen—and the plutocrats won the victory. What then? A nation of helots, of peons, pariahs, proletarians—debased below the level of Russian serfs. What is the remedy? Some say the ballot—but under the sway of the ballot for more than a hundred years, we have achieved present conditions. But, says one, "vote for honest men." That is what we have been doing for a hundred years—that is to say—voting for men said to be honest—and who were probably honest up to the time that the High Priests of Bullion tempted them with "thirty pieces of silver" or a railroad pass, and accepting the bribe they would, in obedience to their masters, have betrayed Jesus Christ, as they have betrayed those who had confidence in them.

But it is doubtless wise to try the ballot method of preserving something of the old glory of the 4th of July. There is little hope that anything very creditable can be accomplished, because the more men are debased, the more ready are they to sell their votes to the monsters who oppress them. Still, if the tyrannies of the present have sufficiently aroused the populace it is possible that honest men may be elected and the 4th of July rescued from eternal odium.

ONCE every fifteen years the planet Mars comes within 35,000,000 miles of the earth. At all other times a distance of 141,000,000 miles separates the Marsians from the people of our sphere.

**LORD MACAULEY'S PROPHECY.**

The corporation press has of late been industriously engaged in printing and circulating Lord Macauley's letter to Mr. Henry S. Randall, of New York, written in May, 1857.

Lord Macauley was of plebeian birth, that is to say, he was not a scion of the aristocracy. He was a child of common people, his father being a Scotch Presbyterian clergyman, and his mother a Quakeress. As a result, while not one of the proletariat class, no aristocratic blood was in his veins. He was a brainy fellow, and his intellectual faculties were of the highest order. These having been discovered, he became the associate of aristocrats—was given governmental employment by which he made money; but whatever of fame has fallen to his lot, was not acquired by aristocratic influences. In politics he made a sorry exhibition, and though once or twice a member of the British Parliament, he did nothing that raised him above the dead line of mediocrity. Practically he knew nothing of government, and his theories of government were a mass of vagaries, except in so far as he allied himself with the English aristocracy and availed himself of opportunities to discredit the class of people in which he was born. It was said of Tom Moore, the Irish poet, that he "dearly loved a Lord"—and the same is true of Macauley, who by his masterly genius won fame as a poet, a historian and essayist, desired to wear the title of "Lord," and be addressed as "My Lord." The title dwarfed him, made him vulgar, as it would have degraded Shakespeare, Milton or Gladstone.

It is this Lord Macauley who prophesied the downfall of the American Republic, because here the people, and not an aristocracy, rules.

Lord Macauley starts out with this declaration: "I have long been convinced that institutions purely democratic must sooner or later destroy liberty, or civilization, or both," and adds:

"In Europe, where the population is dense, the effect of such institutions would be almost instantaneous. What happened lately in France is an example. In 1848 a pure democracy was established there. During a short time there was reason to ex-

pect a general spoliation, a national bankruptcy, a new partition of the soil, a maximum of prices, a ruinous load of taxation laid on the rich for the purpose of supporting the poor in idleness. Such a system would, in twenty years, have made France as poor and barbarous as the France of the Carlovings. Happily, the danger was averted, and now there is a despotism, a silent tribune, and enslaved press. Liberty is gone; but civilization has been saved. I have not the smallest doubt that, if we had a purely democratic government here, the effect would be the same. Either the poor would plunder the rich and civilization would perish, or order and property would be saved by a strong military government and liberty would perish.

The foregoing, as has been stated, was written in 1857, it is now 1894—thirty-seven years ago, and, contemplating France to-day, what must be thought of Macauley's prophecy? It has required a hundred years for France to emancipate herself from kingly and aristocratic rule. Often the people have gone down—but the aristocrats, one time more than the people have succeeded—and to day the democratic government of France is as strong as the aristocratic government of England—indeed, there is less unrest in France than in England. There are no royal baries born in France—no more Prince Imperials. The throne and its jewels have disappeared. There are no "My Lord Macauleys" in France, and there is more liberty in France than there is in England, and civilization is of a type as exalted as England can boast. With these facts in full view, what becomes of "My Lord Macauley's" prophecy? It is reduced to the level of a vagary, to a hallucination—and "My Lord Macauley" stands before the world as a preacher of false doctrines, the defender of the "divine right" of kings and aristocrats to rule—a delusion that is passing away, even in England, where a powerful party exists opposed to the House of Lords, to aristocratic rule and to the throne itself.

Lord Macauley explains to Mr. Randall how unrest and incipient rebellion are suppressed in England at times when alarm prevails. At such times England's aristocratic government introduces heroic measures—the logic of powder and ball—and quiet is restored on the surface, but in every instance the aristocracy makes concessions to the democracy. The franchise is broadened, and ballots are multiplied.

Labor organizes as in the late strike of the coal miners and England's industries are paralyzed—liberty is more firmly established and in the triumphs which the democracy achieves, civilization takes on greater exaltation. "My Lord Macauley" did not see these things. Being a lord by decree, he became oblivious of facts relating to the march and magnitude of coming events even in his own country. And being incapable of comprehending probabilities at home it would be surprising if he understood the character and purposes of the sovereign citizens of the United States. He forgets that the government of the United States is a government by the people. He forgets that the people of the United States are intensely loyal to the government, and that when troubles come by virtue of vicious legislation and corrupt legislators, the purpose is to annul the legislation and depose the rascals who enacted it. To the workmen, to the common people, the constitutions of the states, and the constitution of the Federal government are sacred. Here the masses, the common people, the wage earners, constitute the security of the government. In times of peril the common people of the United States constitute the hope of the country, who now love liberty, law and order as they did when on two occasions they humbled the pride of Lord Macauley's king and his aristocratic advisers. Lord Macauley recites troubles in England and says:

"I have seen England pass three or four times through such critical seasons as I have described. Through such seasons the United States will have to pass in the course of the next century, if not of this. How will you pass through them? I heartily wish you a good deliverance. But my reason and my wishes are at war, and I cannot help foreboding the worst. It is quite plain that your government will never be able to restrain a distressed and discontented majority. For with you the majority is the government, and has the rich, who are always a minority, absolutely at its mercy. The day will come when in the state of New York a multitude of people, none of whom has had more than half a breakfast or expects to have more than half a dinner, will choose a legislature. Is it possible to doubt what sort of legislature will be chosen? On one side is a statesman preaching patience, respect for vested rights, strict observance of public faith. On the other is a demagogue ranting about the tyranny of capitalists and usurers and asking why anybody

should be permitted to drink champagne and to ride in a carriage while thousands of honest folks are in want of necessities. Which of the two candidates is likely to be preferred by a workman who hears his children cry for more bread? I seriously apprehend that you will, in some such season of adversity as I have described, do things which will prevent prosperity from returning; that you will act like people who should, in a year of scarcity, devour all the seed corn, and thus make the next year a year not of scarcity but of absolute famine. There will be, I fear, spoliation. The spoliation will increase the distress. The distress will produce fresh spoliation. There is nothing to stop you. Your Constitution is all sail and no anchor. As I said before, when a society has entered on this downward progress either civilization or liberty must perish. Either some Cæsar or Napoleon will seize the reins of government with a strong hand or your republic will be as fearfully plundered and laid waste by barbarians in the twentieth century as the Roman empire was in the fifth, with this difference that the Huns and Vandals who ravaged the Roman empire came from without, while your Huns and Vandals will have been engendered within your own country by your own institution."

In this year of our Lord, 1894, the country has reached a crisis in commercial and industrial affairs, such as Macauley described. Thousands are out of work, but even the Coxey armies, tramping across the continent—poor, houseless and homeless wanderers in a land of fabulous plenty, the government is not denounced, and every army and every detachment of the army of tramps, bear aloft the national flag. They are in favor of a government of the people and not of plutocrats. They despise the American codfish, mackerel, railroad, coal oil and trust aristocracy as thousands of honest Englishmen despise the aristocracy of their country. They denounce laws which enabled pirates to rob them and demand their repeal, and though hungry and ragged and homeless—"poor wanderers of a stormy day," they sing the "star spangled banner" and bear it aloft as they march and stand.

The flings at the American constitution is in keeping with English thoughts since 1776, but the facts of history emphasize Macauley's folly and short-sightedness. He has visions of a Napoleon or a Cæsar, riding rough shod over the American people, because he imagined the American people are in all regards like the old Roman proletariats, plebeians and slaves. True Cæsars and Napoleons may come, in which

event, there will be occasions for more Mark Antony orations. Lord Macauley talks about the disappearance of liberty and the preservation of civilization, or the destruction of both liberty and civilization. If liberty must go, we say let civilization go with it. In the United States, when liberty and independence goes, there will exist no civilization not even such as Russia boasts. Far better give the country back to wild men and to wild beasts than to become the subjects of a despot and rattle our chains for the amusement of our masters. Things look dark and threatening, and dark days may be in store for the people—but it is always darkest just before day. Lord Macauley was a brilliant essayist and poet and his history of England has given him enduring fame. But as a prophet he is a dead failure.

#### THE LIMIT OF ENDURANCE.

Everything has its limits except space and eternity, provided, they can be called things. The mind and all of its wonderful faculties: thought, imagination, hope, fear and aspirations, all operate within certain boundaries. It may be said that time should be included with space and eternity, perhaps so; it is not essential since we absolutely know nothing of either. True, for convenience we divide and subdivide time and space, but eternity is beyond our grasp and we let it alone. And time and space, though we talk about seconds and centuries, of inches and miles, we find as we proceed that all limits vanish and we turn our attention to things which have limits, and determine as best we may, what their limits are. Life has its limits, our years are numbered—three score and ten is the limit, millions fall short of it, a few go beyond it. The luxuries of wealth have their limit, the privations of poverty have their limit. Human joys and human sorrows have their boundaries. Crime and cruelty, virtue and vice operate within certain restrictions fixed by human depravity, or human probity, regardless of any particular form of government. In a despotism the autocrat determines limits, in a democracy the people exercise that power; in either case it is human will power not divine power, and

being human power that prescribes limits it becomes possible for human power to change the limits, broaden or contract them.

As to the limit of human endurance, history is full of examples, in reading which the mind either expands with rapturous delight, or evinces unutterable scorn and detestation. Slavery is an old time institution. What were the conditions before the flood we are not advised, but as human slavery includes the sum total of human depravity, we do not doubt that the giants, for there were giants we are told in those far away times, subjugated those of less power and brought about that condition of wickedness which prompted the Creator to declare He would annihilate the race; the limit of sin had been reached as also the limit of Jehovah's patience, but his wrath was modified to the extent of saving one man and his family, Noah, all others were drowned as if they had been so many rats. Again we find, according to the record that Divine as certainly as human endurance, has its limits, as, for instance, the cruelties inflicted upon the Israelites in Egypt. These cruelties became so continuous and flagitious that in the councils of the Almighty that vengeance took the place of patience. The grievance committees of the oppressed Israelites were repulsed by Pharaoh, *a la* Pullman, until all Heaven cried "shame!" just as all the Pullman employees pointed their fingers at Pharaoh Pullman and held him up to the scorn of all workingmen of America, whose chicken hearts and white livers had not taken refuge in their boots. Outside of heaven there was no sympathy for the Israelites when Moses ordered the strike, and in dealing with it, God, who was first, last and all the time on the side of Moses, the great labor agitator, did not consider in the slightest degree the inconvenience His methods would bring upon the innocent people of Egypt. To subdue Pharaoh the people suffered every plague, and there were nine of them fell upon the people with the same terrific force that they fell upon Pharaoh. It was Jehovah's way of managing a strike, and as the strike proceeded Jehovah's wrath burned with a fiercer fury, until, to bring Pharaoh to terms, the first born in every family of the Egypt-

ians was slain in a night, then while all Egypt was wrapt in mourning, while every family was wailing, while the embalmers were at work making a mummy in every Egyptian home the limit of endurance was reached and Pharaoh consented to let the enslaved Egyptians go, and suspend brick-making for a time; but he had no sooner consented than he relented and followed the fugitives and met his Red sea defeat. Ultimate limits of Divine and human patience had been reached and the right won a victory.

Since that epoch in the history of labor, numberless Pharaohs have arisen to oppress, rob and degrade the world's toilers and put to the test human endurance, and in millions of instances the limit has been reached and the victims of oppression have gone down to death, unknolled, uncoffined, unshrouded and unsung; and still the Pharaohs and the Pullmans and the corporations and the courts and the armies are driving men to the uttermost limits of endurance. In doing this the pulpit comes to the rescue and recites Paul's direction to Titus "to be subject to principalities and powers," and "obey magistrates," which, had it been followed by the patriots of '76, there would have been no Declaration of Independence, there would have been no great American republic, a new nation would not have been born, and

"The flag of the free heart's only home."  
would never have waved over

"The land of the free and the home of the brave."

We would have remained the subjects of King George and would never have known the inspiring thrill of manhood sovereignty. But the limits of human endurance had been reached, and Patrick Henry condensed it all into a sentence when he said: "Give me liberty, or give me death." Then the patriots of the colonies struck for liberty, regardless of inconveniences, sacrifices death and desolation. Property was destroyed, the laws of England were set at defiance and after an eight year struggle victory perched upon the standard of Washington. King George and his armies were driven away, a price was set upon Washington's head, there was treason in his camps, but France looking on, said liberty is a good thing, the

cause of Washington is just and from sheer sympathy joined in the strike and helped to win a victory. Indeed without such sympathy the struggling continental armies might have gone down in defeat. And yet, thousands of workmen whose vital interests are involved, under the leadership of a Tory press, declaim against sympathy as if it were a crime. The question arises: will the time ever come in America when the toiling masses will declare that decreased wages and consequent poverty and degradation have reached the furthestmost limits of endurance? Already such conditions have been reached by multiplied thousands, and other thousands are yearly being drawn down to death in the maelstrom of corporate greed. Here and there they appeal to their fellow toilers as fate bears them on towards the verge of the vortex, for help, for sympathy, telling them they too are approaching by steady steps to the engulfing whirlpool, but a hireling press and armies of degenerate men tell them their fears are groundless and their protests criminal, and other thousands of their fellow toilers, eating the crumbs which fall from rich men's tables, moral and mental deformities, rattle their chains and chuckle as they see men struggle, as they hear them protest, and by force they cannot withstand whirl to silence.

Men talk of hard times, of commercial, financial and industrial demoralization, and while they talk and scheme, the corporations rob their victims and the limit of human endurance is reached, and trouble begins. The toilers are ostracised, the rich only have influence, they pursue their victims to the uttermost limits of endurance and when they turn upon their pursuers the government brings out its judicial and its military machines, injunctions cover the land like shrouds, marshals swarm like bees in June, troops shoot and stab, the innocent and the guilty pour out their life blood, and the proclamation goes forth "Quiet reigna." The government for the corporation, of the corporation and by the corporation triumphs; the government for, of and by the people, ceases to be—No, not that exactly—"Freedom's battle once begun stands numberless defeats." The champions of the poor may be imprisoned, perish in dungeons,

starved and exiled until their bones fill all the valleys, but at last the genius of liberty shall breathe upon the dry bones, and as in the prophet's vision the world shall see rise up an army, greater than all standing armies of potentates and plutocrats, an army equipped with moral and with physical power that shall bear down and sweep away all opposition and win a victory for labor the fruition of which shall last until the sun is cold.

#### JUDGE BAKER ON STRIKES AND STRIKERS.

Judge Baker, U. S. District Judge, of Indiana, is getting to himself a sort of a national reputation for more than his fair share of misinformation relating to strikes. With plutocrats, the denunciation of strikes and strikers is always popular, because such abuse encourages them to give the screws of oppression another turn, and emboldens them to filch another *per cent.* of wages from the toilers, facts which U. S. judges, except in rare instances, heed, Judge Caldwell standing forth as the one conspicuous exception in a quarter of a century. The *New York World*, in a recent issue, comments as follows:

In hearing a case at Indianapolis, Judge Baker, of the Federal Court, asserted from the bench that every strike to be successful must involve violence, intimidation and wrong. His exact words were:

"Every one that has any sense at all knows that a strike would not amount to anything unless they follow it out by violence. They know that if they would do what they have a right to do, decently and orderly go about their business and leave the employees alone, a strike would not amount to anything. They knew it would absolutely fail."

This statement is not true. History contradicts it. The great English mining strike, one of the greatest in the world, was conducted to success without violence, and that was but one of many examples.

It is a grievous pity that a judge on the bench should talk with so loose a disregard of facts even upon indifferent subjects. It is greatly more than a pity that a judge should so deliver himself upon a matter likely at any moment to come before him in any one of a hundred shapes for judicial determination.

Such utterances discredit him. They cast doubt upon his intelligence. They create suspicion as to his impartiality where judicial calm and fairness are most imperatively needed in order that the rulings of courts may be respected. They suggest either ignorance of the facts of recent history or a reckless disregard of them, and either state of mind is lamentable in a judge.

It is not only a "grievous pity that a

judge on the bench should talk with so loose a disregard of facts," but is a far more grievous pity that men like Judge Baker should be on the bench, unless possibly in a dog show. Manifestly, Judge Baker has no sympathy for a poor man who is oppressed by a rich man. On the bench, he is the watch dog of plutocratic interests. The offshoot of miserable poverty himself, he scratched along, as he says, to obtain an education, for which he is to be honored; but as soon as by the chuc-a-luc of fortune he reaches a post of power, he forgets the poverty and privations of his youth and with the heartlessness of an Apache Indian, turns upon the unfortunate, as if to strike against oppression is a crime deserving the severest condemnation and punishment. Such is his nature, or such has become his nature by associating with tailor made men. Men whose fortunes have been made by methods which in pagan China, would have cost them their heads—but which in the United States confers upon them autocratic powers which they use in alliance with gilded scoundrels, to Russianize America.

The *World* need not to have gone to England for facts to convict Judge Baker of ignorance. There have been a thousand strikes in the United States, for various causes, won and lost, in which there was no violence—in which workingmen boldly stated their grievance and walked out—and this is true in the state constituting Judge Baker's district, facts which he ought to have known, and of which he was doubtless cognizant, but which he lacked the manliness to state, because to have given them judicial prominence would have made him less popular with the plutocratic class, whose interest, it appears, U. S. courts are bound to promote.

The *World* intimates that Judge Baker's utterances disqualify him to act "impartially when judicial calm and fairness are most imperatively needed in order that the rulings of courts may be respected." But U. S. judges, as a rule, care nothing for such criticisms. They are in for life, they have fat salaries, they enjoy all the luxuries—they associate with plutocrats—they look with proud contempt upon working

people, and seemingly rejoice when they can tramp and stamp upon them with the iron shod heels of their judicial boots. As a consequence, the masses, though compelled for a time to submit to judicial outrages, have a contempt for courts that is but one remove from hate, a detestation which is rapidly overcoming patience, and which must be regarded in the nature of a public calamity of uncertain and portentous dimensions.

But Judge Baker having made the mistake that strikes are necessarily attended with violence, has sought to make himself level with plutocrats by denouncing wage-workers on a strike as highway robbers. The *Philadelphia Telegraph* being delighted with Baker's utterances says:

Judge Baker, of the Federal Court of Indiana, has struck the bull's eye of the striking principle in a manner which will commend itself to the great majority of reputable people. Multitudes of other persons have doubtless had the same idea, but it has been given to this wise judge to give it forcible and pointed expression. Judge Baker says that the striker militant, and there are practically no others, is no more nor less than a highwayman. Such a person makes a proposition, or takes a stand as he calls it, which is in reality nothing but a threat. It is a "Stand and deliver" quite as much as though he made a demand for watch and pocketbook.

With such a Jeffrys upon the bench what hope of fairness or justice could a workingman entertain if brought before Baker? A humming bird in hell would have as much chance to save its wings, as a workingman would have for justice if arraigned before the autocrat Baker. Having denounced the striker as a highwayman—no extenuating proof would be tolerated, prejudged and pre-doomed, law, testimony, justice and all things in consonance with liberty are swept away by an autocratic judge as thoroughly permeated with vengeance as a rattlesnake in August is charged with venom. Judge Baker, and other U. S. judges of his ilk, are totally incapable of administering justice when a workingman, who has struck against oppression, spoliation and degradation, pleads for justice in a U. S. court, when such misfits as Baker presides.

A PARISIAN book collector has 700 volumes not larger than one inch wide and two inches tall.

#### WHAT WILL THE VERDICT BE?

In the United States of America the truth admonishes the world that man's capacity for self government is still on trial—a verdict has not yet been rendered, nor does the seer exist who can tell what the verdict will be—nor is this all; our Christian civilization is on trial in the United States, as in no other land beneath the sun.

Now, in the United States we founded a government based upon principles such as no other government ever formulated. We eliminated the false, and enthroned the true. We followed no example, but set an example. Ours was the model government. We had the models of all governments, ancient and modern, before us. The apostle Peter discovered that "God was no respecter of persons," and we said "all men are created equal." We discarded nobility and titles of nobility. We exalted the man, made him a sovereign, and the ballot was his scepter of authority, the one thing that gave him a voice in the government. We did still more. We emancipated religion from government control, and placed all forms of religion upon an absolute equality. The church could rattle but it could not bite. We decreed free thought, free schools, free bible, free speech, free press; in a word, created a nation of free men. There was to be liberty and independence, and every man, in his own way, untrammelled, was to seek for happiness without being questioned by any other man or set of men. Such was the government founded by the fathers of the republic—such is still the theory.

With such a beginning, was it not natural and legitimate to proclaim that here, in the United States, we had founded a government designed to bring forth all the choicest fruits of man's highest conceptions of Christian civilization?

We have said that the government and our civilization are still on trial. The question is being asked, Is man capable of self-government? and is the civilization of which he boasts Christian civilization?

If, to demonstrate man's capacity for self-government, we point to the grand march to the nation's material prosperity during the past hundred years, all doubts at once

disappear and the question is irrevocably settled. Such majesty of sums total silences all croaking, as effectually as the roar of Niagara would drown the chirps of crickets—and if to demonstrate that our civilization is Christian civilization, church edifices, from the “little church around the corner” to the steepled and domed cathedral are to be accepted as conclusive, then, indeed, nothing more in the way of proof need be added. We have the church, the school, the bible, the press, the ballot, and yet the time has not arrived to determine whether or not self-government, government by the people, is a success. The problem is unsolved and uncertainties, like storm clouds, darken the horizon, and doubt and distrust are written on the faces of millions of men and women.

It is not wise that men should become alarmists in any objectionable sense of the term, but it is eminently wise that men should not be blind to conditions and the trend of events, which all prudent men regard as fraught with danger. It may be premature to ring alarm bells, but it is eminently opportune to look facts square in the face, and state them as they actually exist. There are causes which have produced deplorable effects. The effects we see, and we know they are daily becoming more serious.

In view of such things, men are discussing the strength of the government. They say ours is a strong government. Some declare it is the most efficient and mighty government in the world, but to sustain their opinions they refer to the military power of the government, to its resources of physical force; whether it be soldiers, equipped with guns, or deputy marshals and deputy sheriffs, wielding clubs and authorized to use revolvers. And in making such appeals we are adopting the methods of despotisms and semi-despotisms throughout the world.

The cry is heard, not from the “rabble-agitators and demagogues,” but from men in congress and legislature that laws are made to aid plutocrats and oppress the poor, and when the poor resist, the courts issue injunctions and fine and imprison those who disobey, at their own sweet will,

and if the clubs and pistols of deputy marshals do not suffice, their armies are ordered out to shoot, pound and kill, and then the plutocratic class shout, “I told you, ours is a strong government; if you doubt it, count the dead and wounded and dying. If you doubt the power of the government, take the census of the prisons, crowded with men who dared to resist oppression; take a position on the highways and see the manacled procession tramp along to prison, as Russian exiles, the victims of a despot's ire. Go to Siberia, and then ask if the time has come to declare that the experiment of self-government has proven a success, and if our boasted Christian civilization is entitled to the eulogies which pyrotechnic orators bestow upon it.”

We do not doubt the power of the government. It is strong in money and guns. Abandoning persuasion, its hopes center in powder. It exhibits to the world, as do all the strong governments of which we read, that its hopes center in bullets, not in ballots, and the times in which we live proclaim that self government and Christian civilization are on trial. No seer, no wizard, no prophet, as he sees the shadows of coming events fall athwart the pathways of progress and poverty, as hand in hand they march and moan, shout and shiver. God gives the sunshine and the rain. Men plow and sow and reap and gather into barns, set hunger wastes the forms of stalwart men, and women and children in desolate homes gather their rags about them and go down to death, or what is infinitely worse than death. In view of conditions and surroundings, who is prepared to say what is in store for us, or what the verdict will be touching self-government and Christian civilization?

True, we have the ballot, and men could, if they would, wield it in a way to glorify truth and justice and all things calculated to give the victory to self-government and Christian civilization. If the ballot is to be so wielded the time has come for the battle of the ballots to begin. There is hope in the ballot if it is used to place honest men in power. Otherwise, the ballot only hastens the downfall of self-government and makes Christian civilization, if

possible, more odious than the civilization of pagan lands.

In conclusion, John Boyle O'Reilly said and sung:

The earth was not made for its people—that cry has been hounded down as a social crime;

The meaning of life is to barter and buy, and the strongest and shrewdest are masters of time.

God made the million to serve the few, and their questions of right are vain conceits;

To have one sweet home that is safe and true, ten garrets must reek in the darkened streets.

'Tis civilization, so they say, and it cannot be changed for the weakness of men.

Take care! take care! 'tis a desperate way to goad the wolf to the end of his den.

Take heed of your civilization, ye on your pyramids built of quivering hearts;

There are stages, like Paris in '93, where the commonest men play most terrible parts.

Your statutes may crush, but they cannot kill the patient sense of a natural right;

It may slowly move, but the people's will, like the ocean o'er Holland, is always in sight.

"It is not our fault!" say the rich ones. No; 'tis the fault of a system old and strong;

But men are the makers of systems; so the sure will come if we own the wrong.

It will come in peace if the man-right lead; it will sweep in storm if it be denied;

The law to bring justice is always decreed, and on every hand are the warnings cried.

Take heed of your progress! Its feet have trod on the souls it slew with its own pollutions;

Submission is good, but the order of God may flame the torch of the revolutions!

Beware with your classes! Men are men, and a cry in the night is a fearful teacher;

When it reaches the hearts of the masses, then they need but a sword for a judge and a preacher.

Take heed! for your Juggernaut pushes hard; God holds the doom that its day completes;

It will dawn like a fire when the track is barred by a barricade in the city streets.

### THE HARRISBURG CONVENTION.

On Monday, the 10th of September, 1894, the Fourth Biennial Convention of the Brotherhood of Locomotive Firemen will convene in the city of Harrisburg, Pa.

That it will be the most notable convention, without an exception, ever held by the brotherhood we do not doubt; indeed when we give earnest thought to existing conditions of labor throughout the country, we cannot fail to be impressed with the belief that they must of necessity create the profoundest solicitude on the part of the delegates, for never in the history of organized labor has the "impending crisis" been so near at hand as at present.

We are not overestimating the intelligence of the laboring masses when we say that recent events have convinced the most

skeptical in our ranks that the mighty forces of capitalists and millionaires have at last unmasked themselves and now in their true light they stand together in unholy alliance, the most formidable the world has ever seen with the single purpose in view of annihilating if possible, organized labor. Never was there a time when brave and manly words and acts were in as supreme a demand, and we are firm in the belief that the convention will be equal to the occasion.

The outlook is one of great concern and the delegates representing the Brotherhood of Locomotive Firemen should come prepared not to foment strife and discord for the purpose of gratifying selfish or personal desires, but with the firm determination of legislating wholly and solely for the best interests of the toiling masses. While there may be conflicting opinions, there should be a singleness of purpose in a spirit of moderation, concession and compromise, in doing only that which will redound to the everlasting honor of the brotherhood and accomplish work in the interest of organized labor that will be far reaching and beneficial in its results.

The committee of arrangements of Harrisburg Lodge, No. 174, have been fully alive in the matter of securing hotel accommodations at special rates for the delegates and visitors, as will be seen by referring to the following list:

Commonwealth Hotel, Market Square, rate \$2.50 per day, rooms occupied by two persons. Single room, \$3.00 per day.

United States Hotel, corner Market and Camden streets, \$1.50 per day.

Grand Hotel, \$2.50 per day.

Boston House, corner Market Square and Second street, \$2.00 per day.

Lochiel House, Third and Market streets, \$2.00 per day.

Franklin House, Walnut street and Court avenue, rate \$1.50 per day.

Hershey House, 327 Market street, rate \$1.50 per day.

Hotel Columbus, Third and Walnut streets, rate \$1.50 per day.

Commercial House, 217 Market street, \$1.50 per day.

Central Hotel, 311 Market street, \$1.00 per day.

The Commonwealth Hotel will be the headquarters of the grand lodge.

To prevent delay and annoyance it is suggested that delegates secure their rooms in advance. This can be done by corresponding with the "Clerk" of any of the above named hotels, making mention that the writer is a delegate to the B. of L. F. Convention, and giving notice of the time of arrival, or at what time the room is wanted.

The convention from time it is called to

order should be one of business only. Festivities should be sidetracked while the delegates, sensible to their responsibilities and the duty they owe their constituents, deliberate upon the future welfare of the order. Hitherto our conventions have been equal to the task of successfully disposing of grave questions that conditions have imposed, but that matters of far greater importance and of an hundred times more significant in their nature will have to be considered is as true as that day follows night or that rivers flow to the sea.

The delegates fully alive to the emergencies now existing should come prepared to discuss them dispassionately, yet fearlessly, for never has there been a time in our history as an organization, when their utterance could possibly have such force and weight as at present.

The thoughts of the entire labor world will be cast in the direction of the capital of the Keystone state and the rank and file will eagerly await the result of the deliberations of what will doubtless pass into history as the most important convention ever convened by the Brotherhood of Locomotive Firemen.

#### Demands of the Hour.

MR. EDITOR:—I trust I can rightly call you friend, for I feel that all who love human blood more than that which it creates for use, are my friends.

What I write is addressed to those who are beginning to think for themselves. To those who wish to see the social problem solved, and solved aright.

I am pleased to notice that after taking a somewhat pessimistic view of the "Probabilities and Possibilities" you still see the sun of righteous conditions shining from afar. You truly mention that "there was never a period in the history of labor when probabilities and possibilities were so entangled in men's minds as at present." The whole social fabric is in a bad way. It is like a garden, which a man thought to plant in many kinds of vegetables and cereals, which were to embellish the tables of the children of men. But cast a look at the garden and what do we see?

We see that where wheat was thought to have been sown stands *theology*.

That where we were sure corn was planted stands *government*.

The spot which we mistook for a potato patch is occupied by a landlord.

Our patch of rye turns out to be a usurer's exchange table.

Where we were confident our tomatoes, peas, beans, cabbage, &c., &c., were planted stands a subsidized press, boards of trade, far-seeing *business* men, and those who cannot see so far.

Now, what is to be done to cleanse our social garden? The answer is plain enough to me, and if I am right I wish to show others the light. If I am wrong I am ready to be corrected.

Call in the laborers and show them the true condition of the garden. Let them see that, though they have toiled late and early in their efforts to gain that which supports the body and makes peace and happiness possible, they have indeed cultivated those things which are poisonous to the whole human race.

Show them that theology grows in the same proportion as wrong (according to law) grows. Show them that there were more churches built in this country during the year ending June 30th last than ever before in the same period, and that there were also more arrests made and more crime committed, and this in the face of the hardest times this country has seen.

Show them that to keep up the fake of government—city, county, state and national—they have to pay the enormous sum of \$1,000,000,000, which sum simplified amounts to \$15½ for each individual member of the nation, making the father of the average family to pay \$77.00 per year for the "protection" which he is supposed to receive.

Show them that the landlord saps from them a sum about equivalent to the above.

Show them that the exchange tables of national banks alone rob them of \$100,000,000 yearly.

Show them that the great papers of today are used by the hoarders of wealth to mislead those who create all wealth.

Show them that the shrewd business men are those who steal all but a living from the laborers after the other fellows have got all they could.

Show them these things and fail not to present the truth to them, and I believe every worker will soon be found in the garden digging out the poisonous plants which they have ignorantly been protecting and caring for so tenderly ever since the dawn of history. After they have all been dug out and destroyed, let us forget that there ever was such a quality as greed inherent in the human mind.

Let us consider that human nature is only as it has been taught. Then love will rule and the darkness of "cannibalism" and "Christian civilization" will depart from the world forever.

CHAMBERS, NEB.

"Because he can never see anything funny in anybody else's humor."—*Chicago Record*.

**THE GOOD OLD FARM.**

There's got to be a revival  
Of good sound sense among men,  
Before the days of prosperity  
Will dawn upon us again.  
The boys must learn that learnin'  
Means more than the essence of books,  
And the girls must learn that beauty  
Consists in more than looks.

Before we can steer clear of failures  
And big financial alarms,  
The boys have got to quit clerkin'  
And get back on the farms.  
I know it ain't quite so nobby,  
It ain't quite so easy, I know,  
As parting your hair in the middle  
An' sittin' up for a show.

But there's more hard dollars in it,  
An' more independence, too,  
An' more real peace and contentment,  
An' health that is ruddy an' true.  
I know that it takes hard labor,  
But you've got to "hang on" in a store.  
Before you can earn a good livin'  
An' clothes, with but little more.

An' you steer well clear of temptation  
On the good old honest farm,  
An' a thousand ways and fashions  
That only bring to harm,  
There ain't but few that can handle  
With safety other men's cash,  
An' the fate of many who try it  
Prove human nature is rash.

So, when the road to the prison  
Lays by the good old farm,  
An' a man sees a tollin' brother  
Well out of the way of harm,  
He mourns that he hadn't stayed there  
A tillin' the soil in peace,  
Where he'll yet creep back in dishonor,  
After a tardy release.

What hosts of 'em go back broken  
In health, in mind and in purse,  
To die in sight of the clover,  
Or linger along, which is worse.  
An' how many mourn, when useless,  
That they didn't see the charm,  
The safety and independence  
Of a life on the good old farm.

**The Upstart Plutocracy.**

Whoever casts his eyes abroad over the world cannot fail to observe that vast and vigorous changes, whose natural result will be an uplifting of the masses and a general improvement of the social system, are going on throughout all civilized countries. Everywhere is seen a restless discontent with the old order of things, in "which laws grind the poor and rich men rule the law," and a striving after a new order "wherein shall dwell righteousness"—the poor man shall receive a due return for his toil and be given leisure to cultivate those higher faculties by virtue of which he is a man.

On the continent of Europe, where the iron heel of an effete feudalism has well nigh crushed out the manhood of the people, this discontent finds expression in a blind fury which seeks to tear down all existing institutions and substitute for them only a lawless anarchy. In Britain, where comparative freedom has fostered a higher intelligence, it has placed political power

in the hands of the people and is soon to overthrow a worn out and rotten aristocracy, and in this country, where thought is free, where every man is a king and all men are equal before the law, it has already risen against the upstart plutocracy, which in recent years has built itself up by the watering of stocks and the wrecking of railroads, and now seeks to grasp permanent power by fraud at the polls and the corruption of legislatures. Herein we may see the great issue which is to divide the political parties of the near future. It will not be the tariff, nor the currency, nor whether we shall have government or individual ownership of the telegraphs and the railroads. To any of these systems we can adjust ourselves provided they be honestly and economically administered.

The real question will be whether our government shall be controlled by the honest workman, who by his labor adds something to the wealth and comfort of the community, or by the scheming monopolist who produces nothing, lives only for himself and by corrupt legislation seeks to fatten, like the robber baron of the middle ages, upon the spoil of his poorer neighbors. The struggle will be between dishonest capital and honest labor, and the result need not be feared. Eighty thousand must go down before eighty million. The present "hard times," when all over the country millions are standing idle or receiving only precarious employment, will precipitate the issue and bring about an order of things wherein honest labor shall reap the fruit of its toil, and the reign of dishonest capital will come to an end. Then we shall return to the better days of the republic and our country resume its place in the van of civilization.—James R. Gilmore.

**Financial Panics.**

Financial panics, as near as I can ascertain, date back to the year 120 B. C. At that time old Anaharas, one of the sub-rulers of Asia, wanted \$17 mighty bad to make some needed repairs to his house and paint the front picket fence, and he ordered every subject who had any wealth to walk up to the cashier's office and deposit it. After six weeks of bulldozing he got his money, but as there were only \$3 left for about 420,000 people to do business on, a financial panic was the result. For three months the wildest excitement prevailed. Business houses which had been in existence for 200 years and handled over 300 pounds of barley per year were carried to the wall and over it. Such small firms as dealt in dates and carried a stock of ten or twelve pounds on sixty days' time stood no show at all, but were hustled along like feathers before a hurricane. The panic

was stopped by the man who caused it. Old Anahasas ordered everybody to shut up blowing about hard times and resume business, making death the penalty, and in fifteen days things were going on as usual.

Up to the year of 1872 there had been no less than ninety-two financial panics. Some were confined to a single nation, while others were so widespread that if a man in Borneo owed a man in New York \$2 it was impossible to get a squeeze on him. There was apparently no real cause for ninety-one of these panics. The ninety-third, or the one in the spring of 1872, I thoughtlessly brought about myself by threatening to sue a chap who owed me \$7. He got scared and scared the chap who owed him, and inside of two years the United States was up a tree. With the ninety-fourth, or recent one, I had nothing whatever to do, being off on my annual vacation. The first I heard of it was when I got home and found the yard full of butchers, bakers, grocers, and icemen, all of whom recklessly demanded indorsed notes.

While we may not be able to figure out the cause of panics the remedy is at hand and easy of application. I was in Montana when one started. It started in a bank. The banker was about to fail and start a wave of disaster sweeping east when several depositors simultaneously rested the muzzles of their guns on the counter and announced an alternative. The panic fell dead, and public confidence was instantly restored.—*M. Quad.*

### Theories About Baldness.

A question that often arises and is seldom answered twice in the same way is as to why the hair falls out on the top of the head and not at the back and on the sides. The old fashioned theory is that baldness occurs within the lines marked by a man's hat, and as nobody has ever offered conclusive proof to the contrary that explanation may be the correct one.

The case was stated the other day to two very intelligent barbers. One of them thought that the reason why baldness occurred at the top of the head was that the brain came closest to the surface there, and this being an age in which many brains are kept going at high tension the abnormal amount of blood thus carried to the cranium produced a kind of fever in the upper scalp. Fevers, as is well known, often result in the falling out of the hair.

The second barber gave variety to the discussion by enlarging upon the notion that he had formed from the observation and reflection of many years.

"You will notice," said he, that the first hair a baby has comes in on top of the head and falls out before the child is many weeks

old. The hair that comes to stay grows thicker and stronger on the sides and at the back, and I have an idea that the growth on the top of the head is always the weakest from infancy on to old age."

"But how do you account for the fact that women do not grow bald as men do?" queried a skeptical listener.

"Account for it? I don't have to account for it," replied the ready witted second barber. "It isn't so. Why, I used to work in an establishment where they had nine chairs in the men's department and eleven in the women's, and I want to tell you that I learned some things there that the average man and the average barber, too, for that matter, doesn't know. If you could appreciate as I do the number of women who have false hair so artistically arranged that nobody can tell it from their own natural tresses, you wouldn't ask why men grow bald and the other sex doesn't."

Hairdressers have their pet theories on this subject as well as barbers, and some of them are very plausible. But if you should ask a doctor who was not ashamed to confess his ignorance the chances are that he would tell you he didn't know much about it.—*Washington Star.*

### The Bull Fight.

There does not seem to be much solid foundation for the reported decline in the popularity of bull fighting in Spain, and in the south of France the passion for the brutal sport appears to be on the increase. There is not a town of any importance in the south of France which does not boast its arenas, either permanent or temporary, that is to say, in existence during the holiday season. At Bayonne there has recently been constructed an arena which rivals the San Sebastian establishment, at a cost of many thousand pounds. At Mont de Marsan, at Dax, at Bordeaux, and at many other towns in the south of France bull fighting is as common a sport in the summer months as it is in Spain in the winter. The "sport," moreover, is extending northward, and the latest piece of news in matters tauremachie is that a magnificent arena is to be inaugurated this season at Lyons. And be it noted that it is not the old-fashioned baiting that is in question, but the real Spanish bull fighting, with all its horrors of blood and cruelty. The skillful tourneys, where no blood was shed, and where the danger was great for the athletes, are found flat and profitless by the present generation. They will tell you at the Nîmes, or the Bayonne arenas that a genuine Spanish fight, with horses, picadors, and all the rest of it, will draw six times as much money as the most classical bout, and the natural consequence thereof needs no expounding.—*Chicago Inter-Ocean.*

**HYMNS THAT MOTHER SUNG.**

Through the changing scenes of life,  
The shadowed vale of smiles and tears,  
Where all is lost within the mist  
That hides the bygone years.  
Some strains there are that linger still,  
And many hearts no longer young  
Are thrilled with joy again to hear  
The hymns that mother sung.

We used to gather at the hearth  
When darkness overcame the day,  
And, dreamily, as children will,  
We'd watch the shadows play;  
And sitting by the glowing fire,  
As to and fro the kettle swung,  
We learned the songs we've always loved.  
The hymns that mother sung.

We seem to hear again her voice,  
So long remembered, clear and sweet  
As when, in days of long ago,  
We sat at mother's feet;  
And gazing upward on the wall,  
Where dearest father's picture hung,  
We thought he smiled, for he, too, loved  
The hymns that mother sung.

On many snowy wintry nights,  
When all without was cold and drear,  
We've clustered close around her chair  
In happiness and cheer.  
No more for us the glowing fire,  
No more the cricket's chirping tongue,  
And never more on earth we'll hear  
The hymns that mother sung.

To them we owe our happy home.  
Praise be to God who reigns above,  
For keeping ever bright and clear  
The lessons learned in love.  
Outliving sorrows, bearing hope:  
The dear old songs have ever clung  
And never can the heart forget  
The hymns that mother sung.

—*Newark Journal.*

**Ceremonial Manners in Japan.**

Given a highly imitative race like the Japanese, and let one undeviating standard be set before them, and for generation after generation no change will be witnessed. The standard will act like that of the French academy on the language of France. Now, at home, in America, we have fifty standards of manners—the reserved and reticent New England manners, the slap you on the back far western manners, the demagogue's manners, the drummer's manners, the cut and dried business man's manners—these and dozens of others might be specified. And it must be admitted by even the most patriotic that the man who should try to model his deportment on all these schools at once would come to a somewhat mixed result.

Nothing of this bewildering complexity has ever existed in Japan. From mikado at the top to cooly at the bottom of the social scale, one undeviating standard has always prevailed. Originally an importation from China, it has been elaborated through centuries of study of the most elaborate ceremonial etiquette till at last through constant practice it has become second nature. No one ever saw anything else, ever dreamed of anything else.

There is one way of saluting a superior,

one of saluting an equal, one of saluting an inferior, and one's head would have been cut off had he departed from it. No Japanese child ever saw a drummer—saw only prostrate artisans saluting samurai, samurai saluting daimios, daimios saluting shoguns. The whole ceremonial became organized into them as much as their instinctive habits into our setters and pointers, perhaps the best mannered of our population.

Little girls of ten will one see here whose finish of breeding would have awakened the envy of a duchess at the court of Louis XIV at Versailles. Female servants one will encounter at a dinner in the house of a Japanese gentleman whose grace, charm and dignity are the quintessence of lady-like refinement. "Trifles make perfection, but perfection is no trifle." The simple fact is that the young woman of twenty has been doing the thing for a thousand years.

—*Christian Register.*

**Blood Stains.**

To the present day the superstition is rife that blood stains cannot be washed out. During the French revolution 80 priests were massacred in the Carmelite chapel at Paris, and the stains, so called, of their blood are pointed out to-day.

Sir Walter Scott, in his "Tales of a Grandfather," declares that the blood stains of David Rizzio, the Italian private secretary of Mary, Queen of Scots, who was stabbed at Holyrood palace by certain Protestant leaders of her court, aided by her husband, Darnley, are still to be seen.

In Lancashire the natives show a stone called the "bloody stone," which was so marked to show heaven's displeasure at some of Cromwell's soldiers' atrocities at Gallows Croft. In "Macbeth," act 5, scene 1, Shakespeare alludes to the idea, "Yet here's a spot."

The truth is blood cannot be easily expunged. In the first place, if that of a murdered person, it is not attempted. In the next place, blood contains oxide of iron, which sinks deep into the fiber of wood and proves indelible to ordinary washing. Thus it is true that stones of a porous nature and wood not of the hardest kind are susceptible to the stain of blood produced by the oxide of iron which the blood contains. But the blood of a pig is as good as that of a murdered man.—*Pearson's Weekly.*

**Part of the Bird.**

The Young Housewife—Have you any nice chickens?

The Poulterer—Yes, ma'am.

The Young Housewife—Well, send me a couple in time for dinner, and I want them with the croquettes left in, do you understand?—*Chicago Record.*

### The Free Possession of Land.

The Jeffersonian revolutionists of 1776 struck hard at the existing system of civil society, but failed to discover one of the deepest abuses of all. They did not foresee the dreadful consequences of the Anglo-feudal system of land ownership in America. So they let it pass. It was not in Jefferson to blink at what he saw, but he did not see it. In the Declaration the English principle of primogeniture and entail was knocked away. The author of the great document swept over a wide ground in his daring summary of things self evident. All men are created equal. They are endowed with inalienable rights. The principal of these are life, liberty, the pursuit of happiness. Good, Thomas Jefferson! After 118 years we ratify and indorse. But another thing was wanting which you did not perceive. After "the pursuit of happiness" you should have added, "and the free possession of land." That was necessary to complete the fourfold formula of emancipation. The failure of the congress of the revolution to provide in advance against the monopoly of land, with the consequent exclusion of the poor and humble from what ought to be their inalienable birthright, has proved to be the one great bar to the forward march of that democracy which, in the words of Carlyle, is "destined, whirlwindlike, to envelope the world.—*John Clark Ridpath.*

Those who through force of circumstances are obliged to remain in town and get their only outings in semi-occasional trips to the park must notice the rare enjoyment that sundry groups of men, women and children derive from a day of free out-door life spent under the trees and lolling on the velvety green grass. Picnics have always been a most popular form of summer amusement, but when they are made the mainstay of health and happiness to those whose dwelling place is in the closely built up portions of a great city, then they become one of the arteries of life, and as such prove rare objects of pleasant study to the observer. The whole family have come out to spend a long, happy day in some quiet nook near a little stream or in the shade of a giant elm. The father, wearied with the care and monotony of a ceaseless struggle for existence, alternately smokes and dozes, waking when a call to an *al fresco* feast reminds him that he is hungry. And how he does eat, to be sure. No more than the others, perhaps, but the tired lines in his rough face somehow fade away as he devours great slices of pies and cubes of bread in an atmosphere free from the smell of the shop or the dirty street. In thought he is once more a boy on the

old farm, and he looks across the board to his wife, the sweetheart of his youth, and wonders if she, too, is thinking of that old time. She in turn knits a little, but is quite content to sit with folded hands, the pleasant breeze fanning her brow while she watches in pleased amusement the babies rolling in the grass and the little wedding romance springing into sudden growth among the older boys and girls. At last, when night comes, the whole party crowds into the one not over roomy wagon and drives into town. To-morrow they will take up their tiresome duties once again, but life is not quite so hard, for have they not the memory of that one perfect day just gone and the hope of others more to come? And as they close their weary eyes the last waking thought is one of gratitude that city dwellers have yet a bit of country close to their doors to which they may flee when heat and mental worry prove too much for human beings to bear.—*Philadelphia Times.*

### Turtles Good Fighters.

Two months ago a crowd of coal miners near Newport, Pa., took two snapping turtles into a cockpit, and forcing open their jaws poured some whisky down their throats. Then they were turned loose on each other, \$800 being wagered on the outcome, but with the understanding that no decision would be made until one of the snappers gave up or was killed. The turtles fought fiercely, each tearing his antagonist's head and neck with his horny beak until one obtained a grip upon the other's flipper.

After a brief but ineffectual struggle to break his antagonist's hold, the turtle whose flipper was caught seized the other by the neck. Aside from a steady "weaving" motion there was no further demonstration for several hours. The crowd of miners watched them from early evening until long after midnight, when the two turtles, each retaining his vicelike grip on the other, were carried from the pit and placed in the cellar of a deserted house. This was two months ago, and since neither of the snappers has shown any symptoms of weakening his hold upon the other, and the bet has not yet been declared off.—*Chicago Herald.*

WESTERN dealers in silverware are said to make a point by advertising to give the weight of silver dollars in spoons, forks, etc. This at first sight seems a good bargain for the purchaser, but when it is considered that the silver dollar will pass for a hundred cents, while the silver of which it is composed is worth but little more than half that, the margin for manufacturing is seen to be quite a substantial one.—*American Machinist.*

**LIVE IT DOWN.**

Has your life a bitter sorrow?  
Live it down.  
Think about a bright to-morrow,  
Live it down.  
You will find it never pays  
Just to sit, wet-eyed, and gaze  
On the grave of vanished days;  
Live it down.

Is disgrace your galling burden?  
Live it down.  
You can win a brave heart's guerdon,  
Live it down.  
Make your life so free from blame  
That the luster of your fame  
Shall hide all the olden shame;  
Live it down.

Has your heart a secret trouble?  
Live it down.  
Useless grief will make it double,  
Live it down.  
Do not water it with tears—  
Do not feed it with your fears—  
Do not nurse it through the years—  
Live it down.

Have you made some awful error?  
Live it down.  
Do not hide your face in terror;  
Live it down.  
Look the world square in the eyes;  
Go ahead as one who tries  
To be honored ere he dies;  
Live it down.

—Ella Wheeler Wilcox.

**Too Many Sparrows.**

It appears that the detested English sparrow is by no means a general favorite in his own home across the water, where his habits have been more carefully noted.

In the course of his paper on "Wild Birds, Useful and Injurious," in the Royal Agricultural Society's journal, Mr. C. F. Archibald says: "The sparrow has received an overflowing measure of abuse from farmers and gardeners, and, notwithstanding all that has been urged in its favor by enthusiastic advocates, there can be little doubt that it deserves a large share of the vituperation bestowed upon it. The keynote to the sparrow's character is to be found in the delusion under which it labors that corn growing is carried on for its especial benefit. Grain is undoubtedly the mainstay of the sparrow. This it obtains in the fields at seedtime, when sprouting, in the unripe, milky condition, and when fully matured. At this last named period a quantity of grain is wasted by being shaken out on the ground by the birds, in addition to the amount actually consumed. At this time, too, numbers of sparrows which live for the greater part of the year in towns are tempted to visit the field, their grimy appearance proclaiming their usual haunts.

"In gardens the sparrow finds full scope for its destructive propensities in devouring peas, of which it is very fond, as well as a few gooseberries and cherries. In the most mischievous way, too, it pulls to pieces the flowers of the crocus, dahlia, primrose, polyanthus, hepatica, heartsease, wistaria, the

shoots of pinks and carnations, the pods of the laburnum and the blossom of fruit trees. It also does considerable damage to beds of young radishes and lettuces, besides levying toll on the grass seeds sown on lawns. On the other hand, it must be freely admitted that the sparrow does a great deal of good.

"Among the pests destroyed by the sparrows are wireworms, daddy longlegs, weevils from peas and beans, aphides, caterpillars, of various kinds, houseflies, 'blue beetles,' 'black beetles' and white butterflies. In some districts choviss, otherwise known as Maybugs, occasionally do immense damage, and at such times sparrows have been seen with their mouths crammed full of them. The quality of weed seeds which the sparrow eats must also be placed to its credit, for in this way it helps to suppress such objectionable plants as charlock, corn bind weed, goosefoot, knotgrass, buttercup, dandelion, chickweed and dock."

**Teaching the Young Idea.**

Suppose you are a primary teacher. Do you realize what you must put into your work if you wish to succeed? You must be teacher, mother and nurse to your little charges. You must work with them during hours and for them after school. You must be ready to grasp an idea anywhere and adapt it to the needs of a particular pupil who may be dull, indifferent or disheartened, or all three, poor little chaps!

You must be untiring in your vigilance over their morals and set them always a good example in manners by being courteous, even if they break your umbrella or spill ink all over your best gown. If you are a boys' teacher, you must be ready at any moment to dress a cut, pick out a splinter, arbitrate in a fight or give a decision on the merits of racers or the ownership of marbles, fish-hooks and malodorous bottles of bait. If you can't meet these emergencies, the average small boy will hold you in contempt. If you want to win his love, you must know something about the construction of kites, be interested in the "oneriest lookin'" dog that ever invaded a schoolroom, and not be too finicky about when he washed his hands last if a pupil should offer you candy.

If you can do all these things and laugh about them afterward, you will probably stand high in favor.

But there is a more serious consideration. You must also have his respect, and this is not always so easily or pleasantly won.

Great stress has been laid upon the efficacy of moral suasion, but there are times when human perversity rises to such a pitch that the most persuasive tongue is powerless to enforce obedience to your will. You may be obliged to pick up a shrieking,

fighting strap of humanity and put him back repeatedly where you wish him to stay till, worn out from the struggle, he succumbs and likes you all the better for having conquered him. There's nothing mean about the small boy.—*Mary B. O'Sullivan in Donahoe's Magazine.*

### The Late Pat Rooney.

Pat Rooney only recognized his own name in print by looking for the two "o's" in it. He was very diligent in seeking all means of securing his name in large type, and at each stand watched out for those two "o's," only being contented when they were very large and on the top line. Before Pat started starring he had many a spirited argument with the manager of the specialty company of which he was a member on account of sometimes observing the name with the double "o" down low on the bill and in rather small type. The manager generally came out second best, as did all who incurred Pat's displeasure. When the company had a date at Hooley's Theatre, Chicago, Pat, in company with the manager, was passing the theatre. Pat, always eager to have his mind set at rest in regard to the place and size of his name, stopped, and taking a good look at the billboard, and seeing "Hooley's" in very large type at the head, he mistook the two "o's" for the two in Rooney. Rapturously he seized the manager's hand. "Look at that, sir; that's all right, my boy. Rooney on the first line and in the biggest letters. I'll not forget you for seeing to that, old man. Come in and take a drink.—*Chicago Inter-Ocean.*

### Wickerwork.

Young American girls quickly learn the art of work with rushes and wicker. You may hire in New York girls who will weave wicker about small bottles for oil or perfumes at 5 cents a bottle or less. There are places where such work is done by contract, but it is more cheaply done in large quantities by hiring the girls directly and furnishing them materials bought by the hale.

The wicker weaver sits on something like a saddler's horse and holds the bottle in a wooden vise resembling the saddler's. Skilled girls work with great precision and rapidity, and the product, by reason of its simplicity, the almost natural state of the material and the obvious fitness of the fabric for its purpose, has some artistic value.—*New York Sun.*

### A Simile.

Banks—How did you sleep last night?

Tanks—Like a top. The minute my head touched the pillow it went round and round.—*New York World.*

### Uncle Sam's New Library.

No such library as this new one of Uncle Sam's was ever planned before. You must imagine to begin with, two iron bookcases, each 65 feet high, 112 feet long and 45 feet wide. They tower up through the building story on story in nine tiers. Each bookcase will hold 800,000 volumes. The metal framework is made gridiron fashion to permit the free passage of the atmosphere, for books need fresh air as much as human beings, else they rot. The floors are sheets of iron, and fire could do no damage worth mentioning, for books will not burn. They will only smolder under favorable circumstances.

The library has 1,800 windows. Those which admit light to the great book stacks above described are single sheets of fine plate glass. Looking from the interior courtyards, the walls inclosing the book stacks appear to be almost wholly of glass. Thus the title on the back of every volume may be easily read. The shelves already provided will accommodate 1,500,000 books—twice as many as are now in the library.

The building has been so constructed as to afford space for other stacks, which may be put up at any time, and will hold 2,700,000 volumes more. A million books in addition may be accommodated in the courtyards, and there is room for more besides. The librarian of congress a century hence will not find himself cramped in the least.—*Washington Star.*

### The Retort Courteous.

In the course of the debate on the bill to dismiss railway postal clerks Mr. Grosvenor of Ohio was giving the house the benefit of his knowledge of the experience in the postal service as far as appointees in his own district were concerned. He thought that if the bill were amended so as to require the old employees to pass an examination and grade 50 per cent. not one of the dismissed clerks, who, of course, were all Democrats, would come within 1,000 miles of getting back.

"The gentleman is a distinguished member of congress," said Mr. Pendleton of West Virginia. "Does he think he could pass the examination required to enter the railway postal service?"

"I think so," said Mr. Grosvenor, "if the gentleman from West Virginia had to put the questions."—*Washington Post.*

### Obscure.

Old Border—You ought to get a filter, madam.

Mrs. Wisakheard (the landlady)—Why, I thought the water was remarkably clear.

Old Border—So it is. I referred to the soup.—*Life.*

**THE MOTHER WANTS HER BOY.**

There's a homestead waiting for you, my boy,  
 In a quaint old-fashioned town;  
 The gray moss clings to the garden wall,  
 And the dwelling is low and brown;  
 But a vacant chair by the fireside stands,  
 And never a grace is said  
 But a mother prays that her absent son  
 Soon may be homeward led,  
 For the mother wants her boy.

She trains the vines and tends the flowers,  
 For she says "My boy will come;  
 And I want the quiet, humble place  
 To be just the dear old home  
 That it seemed when he, a gentle lad,  
 Used to pluck the orchard's gold,  
 And gather of roses and lilies tall,  
 Far more than his hands could hold,  
 And still I want my boy."

How well we know the very place  
 Where you played at bat and ball;  
 And the violet cap you wore at school  
 Still hangs on its hook in the hall;  
 And when the twilight hour draws near,  
 She steals adown the lane  
 To cosset the lambs you used to pet,  
 And dream you are home again;  
 For the mother wants her boy.

She is growing old and her eyes are dim  
 With watching day by day,  
 For the children nurtured at her breast  
 Have slipped from her arms away;  
 Alone and lonely, she names the hours  
 As the dear ones come and go;  
 Their coming she calls "The time of flowers!"  
 Their going, the "The hours of snow!"

Work on, toil on; give strength and mind  
 To the task in your chosen place,  
 But never forget the dear old home,  
 And the mother's loving face!  
 You may count your blessings score on score,  
 You may heap your golden gain,  
 But remember when her grave is made  
 Your coming will be in vain;  
 'Tis now she wants her boy.

**His Family Sorrows.**

At one of the village stations a woman  
 with a parrot in a cage, got on the train, and  
 soon after she had taken a seat and while  
 the bird was solemnly eyeing the passen-  
 gers around him a jolly looking old man  
 came from the rear end of the car and in-  
 quired.

"Madam, is that a talkin' parrot?"

"Yes sir," she replied.

"Brought up in your own family?"

"Mostly, sir."

"Ah there!" suddenly screamed the bird  
 as he gave his wings a flop.

"That is bewtiful—bewtiful!" chuckled  
 the old man as he rubbed his hands together.

"Madam, I used to own a parrot."

"Yes."

"He was a great comfort to myself and  
 wife, who were childless. He would swear  
 by the hour. Does your bird swear?"

"No sir," she stiffly replied.

"No? You should have taught him to,  
 madam. You don't know how much solace  
 can be got from a swearing parrot."

"You bet!" yelled the parrot.

"Bewtiful—bewtiful! If he does not

swear, he could easily be taught. He uses  
 all kind of slang, of course?"

"No sir. He uses only those two expres-  
 sions, and I'm giving him away on that ac-  
 count."

"You shouldn't do it, madam! You  
 don't know what a comfort it is to have a  
 slangy parrot around the house. My par-  
 rot could say, 'Pull down your vest,' 'Shoot  
 that hat,' 'Get on to his shape' and many  
 other bewtiful things. When my wife lay  
 dying he called out, 'Hold on to your  
 breath!'"

At that moment the conductor came  
 along, and seeing that the woman was an-  
 noyed he suggested to the old man that he  
 return to his seat.

"(Oh, certainly, certainly!)" was the re-  
 ply. "I was just going. Seeing the parrot  
 has put me in mind of my family sorrows,  
 and I will sit down and weep. I once had  
 both wife and parrot, but now I'm all alone  
 in this world—all alone! The last words  
 my wife spoke were, 'Good-by, Richard!'  
 and the last speech the parrot made was,  
 'Nail up your chin!' I hoped this was a  
 bird like mine, but I've been disappointed.  
 Yes, I'll sit down."

He returned to his seat, and for half an  
 hour he wiped the tears from his eyes. I  
 finally went over to him and asked if there  
 was any way I could let the sunshine into  
 his darkened life, and after a pull at his  
 nose he replied:

"Waal, yes. Invite me to step out on  
 the platform and take a nip from your bot-  
 tle!"

We went out and nipped, and his sorrow-  
 ing soul sorrowed no more.—*M. Quad.*

**Don't Use Big Words.**

In promulgating your esoteric cogitations  
 and in articulating your superficial senti-  
 mentalities and amicable philosophical or  
 psychological observations beware of platitu-  
 dinous ponderosity. Let your conversa-  
 tional communications possess a clarified  
 conciseness, a compacted comprehensibil-  
 ity, coalescent consistency and a con-  
 tented cogency. Eschew all conglomerations  
 of flatulent garrulity, jejune babble-  
 ment and asinine affections. Let your ex-  
 temporaneous decantings and unpremeditated  
 expatiations have intelligibility and  
 veracious vivacity without rhodomontade  
 or thrasonical bombast. Sedulously avoid  
 all polysyllabic profundity, pompous pro-  
 lixity, psittacous vacuity, ventriloquial  
 verbosity and vaniloquent vapiditv. Shun  
 double ententes, prurient jocosity and pes-  
 tiferous profanity, obscurant or apparent.  
 In other words, talk plainly, briefly, natu-  
 rally, sensibly, purely and truthfully. Keep  
 from slang; don't put on airs; say what  
 you mean; mean what you say and don't  
 use big words.—*Philadelphia Press.*

### A Matrimonial Conspiracy.

Father John Sergieff, of Cronstadt, is probably the most universally popular priest the Russian Orthodox church. His prayers and benedictions are besought by the piously sick and unfortunate in nearly every government of European Russia, by letter and by telegraph, so implicit is the public confidence reposed in his piety and wisdom. Father John himself is a man of simple life, making no pretensions whatever to extraordinary sanctity, of modest habits and lavish to the last ruble of his considerable income in relieving the necessities, making no distinction of creed or race.

Not a little indignation has therefore been raised by the discovery in the government of Orel that the good father's reputation has for some time past been wickedly traded upon by a number of designing gammas who have unmarried and dowryless daughters to dispose of. These solicitous matrons, sometimes acting in concert, but in different localities, have fabricated letters of advice, purporting to be written by the worthy priest of Cronstadt, recommending particular matrimonial alliances between their daughters and certain pious bachelor neighbors as being divinely ordained.

These spurious letters proved successful in very many instances, but eventually the maternal conspiracy was detected, and it is now probable that the more guilty of the intriguing mothers and matchmaking spinsters of Orel will have to do penance for their indiscretions in a conventual retreat before Father John's absolution is granted and the civil authorities are satisfied.—*Odessa Cor. London News.*

### A Balloon Explosion.

"One of my balloons gave me a scare once," remarked Mr. Carl E. Myers, the aeronaut, "but it wasn't because I was in it. It was in June of 1891, when I was conducting some rainmaking experiments in Washington. I sent up a balloon ten feet in diameter, filled one-third with oxygen and two thirds with hydrogen gas, and at the height of 1,500 feet I exploded it by an electric wire. It was the most extraordinary sight that I have ever seen, that explosion. As for the sound—well, that was what frightened me. I wasn't prepared for it. At the instant of the explosion the balloon became 100 feet in diameter and of a dull red color. It wasn't as if it had expanded to that size. It looked as if the original balloon had simply disappeared and another ten times as big had simultaneously taken its place. A fraction of a second later the thing vanished, and the air was filled with minute particles. Then

came an explosion that was simply terrifying. Never have I heard anything to approach it. It seemed to shake my heart within me. My head rang for hours afterwards. The wire was thrown back to us crumpled up like so much twine. For a distance around all the little fishes in the brooks were killed by the concussion.

"Directly below the balloon was the bowling alley of the Casino rink, and after the explosion that alley looked as if an aerial giant had stepped on it. It collapsed as a card house collapses under a careless touch. On the following day I received polite notes from the assistant secretary of agriculture and the chief clerk of the Smithsonian institute. The secretary protested mildly. The chief clerk set forth that his cattle on a neighboring farm had been seriously disturbed by the explosion, and would I please go away somewhere when I wanted to do it again. I moved to Texas, where cattle are cheap."

### Doubtful About the Doubt.

We are justly proud of our jury system, but the twelve "good men and true" are not always the wisest of mankind. At a recent session a prisoner was indicted for pocket picking, and to most people in court the clearest possible case was made out by the prosecution.

"Have you anything you would like to tell the jury before they retire?" said the judge.

"Well, all I want to say is, I hopes as 'ow they'll give me the benefit of the doubt," replied the prisoner despondently.

The jury considered their verdict. They were no little time over it.

"Can I assist you in any way, gentlemen?" said the judge at last becoming impatient.

"We are almost agreed, me lud," said the foreman, "but we can't quite understand what the doubt is the prisoner wishes us to give him the benefit of."—*London Tit-Bits.*

### A Shower of Wheat.

In the 1696 or thereabouts it was a report in Bristol and thereabouts that it rained wheat about this town and six or seven miles round, and many believed it. One Mr. Cole being curious to find out the truth of the odd phenomenon procured several parcels of it, and upon diligent examination of them with magnifying glasses, judged from the taste, figure, size and smell that they were seeds of ivy berries, driven by a strong wind from the holes and chinks of houses, churches and other buildings, where starlings and other birds had laid or dropped them, but if so it's strange that they should fall in so great quantities in so many places.—*Cor's Magna Britannia.*

**THE ENGINEER'S SOLILOQUY.**

What's the world a-coming to, an engineer would like to know,  
 When they are making ice to order, and manufacturing snow?  
 The cities have gone out of sight,  
 For when they have a cloudy night,  
 They run the stars by steam.  
 And here's the lightning with a song, proclaiming man is boss,  
 And all the street cars skim along without a mule or "hoss."  
 And here's that ringing telephone that never seems to tire,  
 But takes a man's voice free of charge o'er a hundred miles of wire.  
 And here's the phonograph which makes your memory vain,  
 And like a woman, when you talk keeps talking back again,  
 Oh! how the world is moving beneath the sun and moon,  
 I can't help thinking I was born a hundred years too soon,  
 But when I go to heaven it won't be in the night,  
 For my grave shall shine like daylight in a bright electric light.

—From the *Engineers' Review*.

**Pullman's Cheapening of Cars.**

Since the railroad strikes happened there have been numerous attempts made to defend the action of the Pullman company in reducing the wages of car builders, on the grounds that the prices paid for car building is so low that the work could not be done unless the price of labor was exceptionally low. We should like to ask these apologizers for and defenders of the Pullman company, who was responsible for bringing the building of cars to a point of cheapness where living wages could not be paid? Every one who understands how car-building contracts have been awarded in the last year is perfectly aware that Pullman has been principally responsible for the unparalleled low prices for which contracts have been taken. Pullman has grasped nearly all the orders given out because he had a wage-reducing hold upon his workmen possessed by no other manufacturer of cars. When bids were put in for building a lot of cars, the ordinary run of builders would figure on living wages for their workmen reduced as far as reason would go, and they would generally offer to take the contract on cost prices. These figures were nearly always underbid by the Pullman company, because the latter were aware that their workmen, housed in dwellings rented from the company and held in bondage by the institutions peculiar to that extraordinary social vampire, could not successfully resist reduction in wages of a character which no other car builders would ask their men to submit to. This is not fair competition. It is forcing other car builders and their workmen to the wall by a power which no company or individual has a right to exercise in a free country.

We should like to know who or what has derived benefit from this unequaled era of

cheapness in car building brought about by the Pullman methods. Railroad companies may save a few dollars in a car, but it is not felt in their aggregate expenditures. The workman has no money to spend beyond paying for bare living, and all those who benefit from the active circulation of money suffer in consequence. It is a sorrowful outlook for a country when the law of free competition is exceeded to bring prices down to the bare necessities of life. Cheapness is a curse to every country where it holds dominion.—*Locomotive Engineering*.

**He Held the Fort.**

"Do you know that little fellow?" asked an old-timer, as the scribe shook hands with Gus Dowdell, of the Gould Coupler Co., on the porch at Saratoga.

"Yes, he's with Gould—"

"Oh, I know, I know, my boy; but do you know his history?"

The scribe took out his note book and put down a mark—it was one of the few things left that he had not found out—and answered "No."

"Well, sir, that boy was a telegraph operator on the Pennsylvania road at Pittsburgh during the Centennial, and the great strike of '77 found him there. He stayed at his post to the last. When the old Union depot was ablaze he wired: 'The depot is on fire now,' and half an hour later: 'This room is too hot to stay in any longer, good-bye.' Then he took the screws out of his key, tore it off the table, put it under his coat and left."

"When old Tom Scott heard of it, he sent for the boy, and gave him a good job—took him to Europe with him the next year and the year following sent him over alone; besides he gave him a pass for life on the P. R. R. system. Gus is a brick, you bet!"—*Locomotive Engineering*.

**A Mechanical Horse.**

A correspondent sends us a copy of a St. Paul paper containing what is evidently a reproduction of a patent-office drawing of a mechanical horse. This horse's interior economy consists of various spur-wheels, cranks, levers, hinges, springs, etc., all of which operating severally and conjointly are supposed to imitate the motion of a real horse in walking, while the motive power is derived from the legs of the rider who is supposed to sit upon the back of this contrivance and work his feet up and down a la bicycle. Under what theory a patent is granted upon such a thing as a "useful invention" is more than we find ourselves able to comprehend in the limited time we can permit ourselves to study the matter.

It is stated in defense of this monstrosity at the bicyclist does not feel that sense superiority over ordinary pedestrians at the equestrian does, and this horse is assigned to fill this long-felt want. It is stated, furthermore, that when this horse walking there will be the same action to maintain his perpendicular that there is in the revolving wheels of a bicycle, and that will be impossible to tip it over. We would judge the whole contrivance to weigh about 1,000 pounds, and the sight of man mounted upon it and trying to work up a moderate grade would be a spectacle for the gods. Verily! the fool-killer both sadly neglect his business.—*American Machinist*.

### Punished for Curiosity.

It is dangerous to gratify curiosity or to isolate precedent at the Chinese imperial court. The empress dowager is a great tickler for etiquette. Recently she required the services of Dr. Li Tech'ang, vice president of the Imperial Academy of Physicians, at Peking, for one of the members of her suit at Eho Park palace. The learned doctor had never been inside these famous palace grounds, and his curiosity was fired to see the many curious objects of which he had heard wonderful tales. So he bribed a palace eunuch to show him around the grounds.

While the two were leisurely walking about and enjoying themselves the empress spied them. She at once dispatched servants to punish their effrontery. The eunuch was seized, thrown on his face and accommodated with 50 blows with the bamboo on the calves of his fat legs. The doctor was docked three months' pay and received a severe reprimand, while his assistant was ordered never to venture again into the empress' presence.

The affair created a sensation because of the high position of the physician and of the humiliating punishment dealt out to him.—*New York Sun*.

### Small but Firm.

It was in the smoking car on the New York Central. There was one chap who was blustering a great deal and telling how many duels he had fought, and behind him sat a small man reading a magazine.

"Sir!" said the big man, as he wheeled around, "what would you do if challenged?"

"Refuse," was the quiet reply.

"Ah! I thought as much. Refuse and be branded as a coward! What if a gentleman offered you the choice of a duel or a public horse-whipping—then what?"

"I'd take the whipping."

"Ah! I thought so; thought so from the

looks of you. Suppose, sir, you had foully slandered me?"

"I never slander."

"Then, sir, suppose I had coolly and deliberately insulted you. What would you do?"

"I'd rise up this way, put down my book this way, and reach over like this, and take you by the nose like this, and give it a three-quarter twist—just so!"

When the little man let go of the big man's nose, the man with the white hat on began to crouch down to get away from bullets, but there was no shooting. The big man turned red, then pale, then looked the little man over and remarked:

"Certainly—of course—that's it exactly!"

The little man, whose name is Twombly, had resumed reading his magazine. When the others found that the case was settled they returned to their talk about the strikes.—*Locomotive Engineering*.

### Champagne and Whisky.

Dr. S. Weir Mitchell in answer to the question, "Which one of the alcoholic liquors is the least injurious for man to drink?" has written a letter saying that, "setting aside considerations of peculiarities, of personal temperament and individual idiosyncracies and attempting to lay down a rule for the government of the majority of cases" he would say "in a general way" he adhered to the old traditional belief that "whisky is, after all, the least injurious, safest and best." But constitutions and temperaments are affected in many different ways. For instance, he knows a man who thinks that whisky poisons him, yet can take champagne with impunity, while there are others to whom champagne is poison who can drink whisky without feeling any the worse for it.—*Philadelphia Record*.

### Another Bold Texan.

A young married couple from Texas were doing Niagara falls. They were being conducted under the falls by a guide.

"You must take care now, for if you let your foot slip you will be lost."

"Jane, you go on ahead," said the man from Texas.—*Texas Siftings*.

### Worse and Worse.

Infant Terrible—Mrs. Myles was praising you to day, mamma, to Mrs. Renwick. I was on the other side of the garden wall and heard 'em.

Mamma—What did she say?

Infant Terrible—She said there were worse old gossips than you in the town, after all.—*Truth*.

**IN THE HEART.**

If no kindly thought or word  
We can give, some soul to bless;  
If our hands, from hour to hour,  
Do no deeds of gentleness;  
If to lone and weary ones  
We no comfort will impart—  
Tho' 'tis summer in the sky,  
Yet 'tis winter in the heart!

If we strive to lift the gloom  
From a dark and burdened life;  
If we seek to lull the storm  
Of our fallen brother's strife;  
If we bid all hate and scorn  
From the spirit to depart—  
Tho' 'tis winter in the sky,  
Yet 'tis summer in the heart!

**Can there be a Lawful Railway Strike?**

The country has learned a good deal about the law of common carriers and the law of conspiracy during the past week or two. Certain legal principles have been forced into prominence which ought to have great interest to labor organizations and which will not be forgotten in future strikes.

In the first place any interference with or wilful obstruction to the passage of the United States mails is a crime. In the second place any interference with or wilful obstruction to inter-state commerce is a crime; and any conspiracy to prohibit, limit, confine or abridge inter-state commerce is also a crime. The continuance of obstruction to or interference with the passage of the mails or the conduct of inter-state commerce in opposition to the civic or political authorities is an insurrection. The attempt on the part of any considerable number of persons to resist the arrest by proper officers of the law of any person or persons guilty of obstructing or interfering with the passage of the mails or the conduct of inter-state commerce is an insurrection.

Can there be such a thing as a lawful strike on any railway engaged in inter-state commerce?

When a strike takes place on any railway it is presumably with the object of crippling or interfering with the conduct of the business of the road. If this intent can be proved against the parties to the strike, it undoubtedly becomes a conspiracy and any participant in the strike commits a crime. There might, however, be difficulty in proving this intent in a case where men peacefully and individually stopped work. But this is certain: After they have stopped work any one of them who by intimidation or by violence prevents any other man from going to work or who takes any active step whatsoever to prevent the company from resuming or continuing operations, or who offers any obstruction to the passage of any train, is guilty of a crime. United opposition on the part of those who have struck to the

resumption or continuance of business, in defiance of the civil or political authorities of the city or state or nation, is an insurrection.

The very essence of a strike on any railway is to interfere with its business. If that business is the conduct of inter-state commerce, such interference is a crime. If that interference is persisted in, in active opposition to the constituted authorities, every man assisting in such interference is an insurgent against the government of the United States.—*Railway Age*.

**How a Trolley Car Really Works.**

The following has been published as a *bona fide* explanation of the action of a trolley car by a man who professed to know all about such matters, given for the benefit of his friend who had never studied into the matter. They were standing near a trolley car and the electrician said:

"You see that little copper wheel on top of the pole, that runs along pressing against the wire; well, that's what makes the electricity. That was the invention. The pole from the car-roof with the copper wheel on the end of it is what they call the carbon. Now, some fellow discovered that such a wheel on the end of the carbon, running against a steel wire, created the electricity. The faster that copper wheel revolves the more electricity it makes and the faster the car goes. That's the reason the little copper wheel is made so small. Then the extra power, more than is necessary to keep the car going, you know, is accumulated in those things at each end of the car, and when the driver wants to start her up he just turns his crank and lets out enough electricity to start her; then the copper wheel on top of the carbon starts generating, and so on it goes. (Great invention, sir; great invention!)"

This man is undoubtedly one of the many who are always ready to affirm that there can be no doubt that electricity is going to supplant the steam engine.—*American Machinist*.

**Webster's Portrait.**

Daniel Webster once sat for his portrait to the late G. P. Healy, and the senator's remark when he surveyed the completed picture became one of the artist's favorite anecdotes in after years. "I think," said Webster as he looked at his counterfeit presentment, "that is a face I have often shaved." Healy found Andrew Jackson a disagreeable and unwilling "subject," and he compensated himself by painting Old Hickory with absolute fidelity to nature, not glossing a single defect. The portrait gives Jackson an ugly, savage and pallid face.—*Chicago Herald*.

### Bucked Against Etiquette.

The following story is told by the *Washington Times* on one of the Florida congressmen:

The gentleman in question was called on the other day at his hotel by a delegation of about twenty citizens from his district, who had come to advocate the claims of a certain candidate for postmaster, who, it was generally understood, was to get the place, but whose nomination failed to be recorded among the elect on the yellow tissue paper. The delegation all knew the congressman pretty well, and so they went up to the congressman's room in a body, where they found him shaving, and filed in one by one.

The Florida statesman was rather dismayed by the delegation and didn't know just what to do with them, but after a pause he blurted out rather sharply:

"Look here! Of course you know I don't mind it a bit, but a man can't act up here at Washington the way he would down in Florida. They have a thing they call etiquette up here, and it's the proper thing to send up your card before you come to a gentleman's room."

"All right," said the leader who took the matter more seriously than was intended. "We'll go down stairs and send up our cards."

Before the congressman could recover from his surprise the whole delegation filed out of the room without another word, and a few minutes later a porter brought up a batch of cards. The congressman reflected a moment. "Tell them I'm out," was his answer.

The delegation has not been heard of since, but it is rumored that they have purchased books on etiquette "to learn what it is, anyway."

AFTER an investigation of the subject of railroad pooling, extending through all of this congress, the house committee on commerce has reported the bill, of which representative Patterson of Tennessee is the author, to radically modify the anti-pooling section of the inter-state act, so as to permit pooling under certain restrictions and under the supervision of the inter-state commerce commission. The report states that there has been shown a consensus of opinion on the part of the state commissioners and the inter-state commerce commission to permit competing roads to enter into contracts for a division of their gross earnings under safeguards and restrictions. It is held that if the companies were receiving the published rates approved by the inter-state commerce commission they would be comparatively prosperous. By rebates, drawbacks and other devices the large shippers are reim-

bursed, while the small shippers are required to pay the published rates. Thus, it is held, the railroads are impoverished, the public injured, small enterprises destroyed and discouragement of individual efforts brought about. A system by which competing railroads may divide their earnings, says the report, would remove the motive for discrimination, so that large and small shippers would fare alike.—*Railway Age*.

THE recent court decision in a western state which permits persons who have made a voluntary settlement with railway companies for personal injury claims to bring suit for additional amounts, retaining what they have already received from the company, is an encouragement to litigation that will gratify small lawyers and dishonest claimants. It is the commendable practice of most of the railway companies to adjust claims for injuries promptly and liberally with the claimants themselves, without putting them to the cost and harassment of retaining lawyers—who commonly take the lion's share of the amount awarded—and of carrying on a long contested suit. Thus the Chicago, Milwaukee & St. Paul company has had 5,139 claims for personal injuries presented to it within the past three years of which only 189 went into court, all the others being amicably settled. But if every person who has been injured on a railway can accept payment of his demands, signing a release of all claims, and then allow a shyster to commence suit for a larger sum on the pretence that he was deceived or unduly influenced by the claim agent, the natural course of the companies will be to stop making agreements which the beneficiaries may immediately violate and to let claims take the slow and uncertain course of litigation.—*Railway Age*.

ONE of the most curious situations, perhaps, ever presented by the records of the Patent Office is found in the fact as stated, that Mr. Seymour, who is now Patent Commissioner, acted, prior to his appointment, as patent attorney in an application made for a patent on an improvement in air compressors. This was in 1883, and the application was returned on account of informalities and ambiguity of terms with a recommendation that a competent attorney be employed to present it. The attorney who made the imperfect application having now become Patent Commissioner, is asked to pass upon the application for a reopening of the case.

It is to be noted, however, that many men can learn a good deal of patent law in eleven years—the time intervening between the first application and the petition for its

re-opening, and as the man who figures as the inventor in the case discharged a number of machinists some time ago because they did not vote to suit him, it is just possible there may be more politics in this revival of the case than there should be. Nevertheless, upon the face of it, it must be confessed there is little encouragement in the incident for those who are interested in inventions and patent matters.—*American Machinist*.

It is sad to reflect that railroads with an air of romance about them are subject to the same influences which brought the Prairie Midland and the Mountain Central to grief. About two years ago we gave illustrations of locomotives from the Baldwin Locomotive Works being unloaded at Jaffa for the Jaffa & Jerusalem Railway. The engines were duly put in service and the road opened. The population of Jerusalem has greatly increased of late years, and is now about 90,000. It was expected that the railway would greatly boom the ancient city, and that the adjacent territory would begin to have fewer beggars and more laborers. These improvements may be on the way, but they did not come soon enough to give the railway a paying business. The tourists who were to crowd the trains did not appear in the expected numbers, and the consequence is that the company has defaulted in the interest of its bonds, and the road is in the hands of its enemy—a receiver, or his Asia Minor equivalent.—*Locomotive Engineering*.

#### Pots and Pans in Paris.

I was particularly struck by the number of cooking utensils I saw heaped up in one of the rooms at the laboratory. "Confiscations of the inspector," said the chemist.

"Do you survey kitchens, then?"

"Certainly," he responded. "Every dish used in a public restaurant in Paris, either in the kitchen or for the table; every pot, pan and utensil in the bakeries, and every beer faucet in the wine shop—in short, everything used in preparing or serving foods is under the care of the inspector. The law forbids the use of lead, zinc and galvanized iron in the manufacture of cooking vessels. It orders that all copper vessels be tinned and kept in good condition. It directs that pottery which is covered with a glaze containing enough oxide of lead to yield to a feeble acid be seized. It orders that tin cans never be soldered on the inside, and that the materials used in their manufacture be conformed to a certain standard. It is the inspector's business to look after these things."

"And the results?"

"That depends. There are certain estab-

lishments in Paris, like the great restaurants, which employ a skilled tinner regularly, and their utensils are always in order. In many little shops kept by women the copper vessels are the pride of the establishment, but in many others they are unhappily neglected. In 1889, out of 215 samples analyzed here 97 contained lead."

#### Railroads in the Wrong Places.

When you see the words Boston & Albany you naturally think of the road from the Hub to the Hudson, but there is a Boston & Albany of Georgia.

Who'd suppose that the Bangor & Portland was anywhere but in Maine. It's up in the interior of Pennsylvania.

The Oregon & Texas begins on the line of the Fall Brook road and runs up to a tie camp. The only two stations on the road are named Texas and Oregon.—*Locomotive Engineering*.

#### A Thief Rewarded.

A thief in the act of breaking into a safe was greatly astonished on looking up to see a gentleman quietly watching his proceedings. He tried to escape, but the gentleman stopped him.

"Go on, my friend," he said. "I am greatly interested in your work."

"How is that?" inquired the astonished thief.

"Because I have lost the key to this safe. If you can open it, you shall be well rewarded for your trouble."—*Arlequin*.

#### The Year 1894.

The year 1894 corresponds to the one thousand eight hundred and ninety-eighth from the birth of Christ, to the year 7403 of the Byzantine era, to the years 5654-5 of the Jewish era (the latter year beginning at sunset on Sept. 30), to the year 2647 since the foundation of Rome, to the year 2554 of the Japanese, and to the years 1311-12 of the Mohammedan era, the year 1312 of the era of the begira having begun on the 6th of July.—*St. Louis Republic*.

#### A Study in Wrinkles.

When George Rignold was playing "Henry V," a friend visited him in his dressing room and remarked a large and handsome photograph of Wordsworth hanging on the wall. Said the friend, "I see you are an admirer of Wordsworth."

"Who's Wordsworth?" queried the actor.

"Why, that's his picture—Wordsworth, the poet."

"Is that old fellow a poet? I got him for a study of wrinkles."—*London Answers*.

### A Fruitless Investigation.

Three years ago a royal commission on labor was appointed in England to investigate "the questions affecting the relations of employers and employed," and "to report whether legislation can with advantage be directed to the remedy of any evils that may be disclosed, and, if so, in what manner."

It was the most important attempt to settle the labor question ever made in that country. The commission, as the *London Times* remarked at the time of its appointment, was "unparalleled for size and the representative character of its members." "Great expectations" of the result of its inquiry were aroused, for both labor and capital were considered equally in its appointment. Nor has the commission disappointed the public so far as concerns the thoroughness with which it has performed the task committed to it. It has done a prodigious amount of work. Sixty-seven separate blue books have been filled with reports of its proceedings, and it has expended in them the great sum of nearly 250,000.

Every phase of the labor question has been studied by it minutely and laboriously. Every variety of opinion has been obtained from both employers and employed. Yet no result of any practical value has been reached. Nothing has been brought out which affords any assistance toward the solution of the problems discussed. On all hands, in the commission itself and outside of it, among both employers and employed, there is only dissatisfaction. Its reports present no decision of any importance, but merely a mass of conflicting opinions and impressions. For instance, one witness puts the total membership of labor unions at 871,000 and another at 1,500,000; and the commission does not venture to say whether they include 10 per cent. or 20 per cent. of English workmen. As to the legislative regulation which it was appointed to suggest, it can recommend only that nothing more be attempted in that direction. Practically it gives up the problem as insoluble by any possible legislative devices.

All attempts to settle the question, which have been made in this country by legislative means, have been equally fruitless. At one time the bureaus of labor statistics in the states were demanded by leaders of labor unions as a panacea for the troubles. They proved to be useless, except as a means of multiplying offices. Official arbitrators were created but they had nothing to arbitrate about; and even if they had had the chance to interfere, they could not enforce their decision without a radical change in the constitution. They couldn't compel men to work for less wages than they were

willing to take; and they could not enforce employers to pay higher wages than they were willing to give. They could not compel men to labor for employers they did not wish to serve, and they could not compel employers to keep laborers they did not want. They could not make it lawful for one set of workmen who had thrown up their places, to keep another set from taking them. Strikes continued to be almost invariably and necessarily violent, for the possibility of their success depended generally on the ability of the strikers to prevent other laborers from taking the wages they had rejected. Strike succeeds strike and legislative devices for the cure of the trouble follow each other in constant succession, but the remedy is not discovered.

It is not discoverable. A hundred thousand blue books may be filled with the story of the attempts to find it, but it will not be found. The right to labor and the right to employ labor cannot be interfered with. Competition in labor cannot be prevented by any legislative means possible. Men cannot be lifted up by law. They must lift themselves up. If a man is willing to work for a dollar a day, he cannot lawfully be restrained from taking the wage. If a man is unwilling to pay more than a dollar a day, he can not be forced by law to give more, though he may be driven by the necessities of his enterprise to make the price higher.

These labor commissions are useless. They can advise nothing. State arbitration between employer and employed is a humbug. It is only suggested to wheedle the ignorant laborer.—*N. Y. Sun.*

### Sale of the Thousand Islands.

The government is rejoicing over the sale of the Thousand Islands, which, it appears, are going off cheap for cash. Over 300 have been sold for the paltry sum of \$40,000, or, say, \$125 each. The Ontario government was not given much time to consider their purchase. The Dominion government has had its own way. The "nigger in this woodpile" is yet to be discovered. Just what motive is behind the determination of the government to sell the islands in spite of public opinion is not evident. Those who remember all the Rykert and other timber land deals, and who look back over the 13 years' record of this most corrupt government, will look for revelations in connection with this matter some day.—*Montreal Witness.*

### A Substitute.

He—I've brought you a pet monkey to amuse you, darling.

She—Oh, how kind of you! Now I shan't miss you when you are away.—*Lyons (France) Republican.*

### Pleasing a Husband.

Why is it, asks a female critic, that women treat their husbands as if they were the only bores of their acquaintance? Surely after having chosen one man from among millions for a life companion, one can at least treat him well during the journey. I think that one great trouble is that always immediately after marriage the wife becomes careless before her husband, regarding him as a property, and gives up all effort to please him. There is no greater mistake. A husband, as a rule, is easy to win, but hard to hold. Treat the man as carelessly as you will before marriage, but after marriage make yourself the idealized synonym of womanhood for him. Exert easily and without any apparent intention every charm, every womanly fascination you possess. What you don't possess cultivate. Make your mind and your wishes in harmony so far as possible with your husband's. Put your nature *en rapport* with his. Learn something of his affairs, appreciate him, interest yourself in his work, help him yourself practically.

Let your soul and mind reach out and be an inspiration to him. There is no man who can not do more for the assistance and encouragement of a woman if she loves him. Then cultivate your own mind. A husband soon ceases to care for a woman who is mentally greatly his inferior. Dress for him. Never let him see you in curl papers and a wrapper. Always try to keep yourself the daintiest, the most chic, the best educated woman of his acquaintance. Make him proud of you. Entertain for him; to make his evenings cheerful, be gracious to his friends, dress for dinner always, let him invite whom he will to dinner without complaint, be systematic about your household affairs, and don't nag your husband with all the petty cares of the day. It is bad enough to endure them. It doubles them to recount them.

Personally, keep always a haze of idealism about yourself for your husband. Be always a pleasant problem for him. Coquette with him, and remember that the only proper person with whom a wife may coquette is her husband. He may not expect to find variety in you. Husbands seldom do in their wives. But let him see that you possess the greatest quality of fascination. There is nothing that so greatly preserves the admiration of a husband for his wife as the fact that she is the object of others' admiration. Reserve always some part of yourself from your husband; let him realize that there is still some fascinating mystery about you that he has not yet solved—in short, idealize yourself for him. Keep up the romance of life and he will follow you always. Suggestiveness is the wonderful charm of women. Do not let him feel that

you are one of the commonplaces of his life, but stand on your pedestal of wife as an idealized reality. We see a mountain in the range of our vision shrouded in the wonderful blue haze in which nature wraps herself, and we are charmed. We reach the mountain top, and, alas! the haze has vanished. Surely the haze of a fascination should never be dropped by a wife before her husband's eyes.

### The Value of a Fan.

"When we were children," remarked a delightful old lady, who carried her 70 years with aristocratic grace, "The little girls were always taught to carry a fan when they went into the drawing room. 'Always carry your fan, my dear,' was my mother's last injunction when I went out. 'It will keep you from feeling awkward and looking conscious,' and I have often thought what an excellent fashion it was and what a pity it is that the importance of the fan had so greatly decreased. In my day to manage a fan properly was considered a distinct accomplishment. To unfurl it slowly and majestically as a Juno might, to flutter it vivaciously, to wave it languidly, to open and shut it meditatively—all this we were expected to learn by instinct and observation.

"With a fan you need never look ill at ease," was another of my mother's maxims, and we girls quickly found out the truth of this for ourselves, and I tell my granddaughters that they lose a goodly weapon when they leave their fans at home or consider them merely as an adjunct of their toilets, in use merely to cool their heated faces."—*New York Tribune*.

"It is always usual to speak of India as a country whose public works and general civilization are a long way behind the times," said Capt. Easley, of the British army. "People who make this criticism would be surprised to see some of the roads in British India, especially any one who has been used for a long time to the highways of America. The longest trunk road in the world is in the northern part of India, and it is kept in repair at comparatively small expense, thousands of men being glad to work on it, especially during famine years, at purely nominal remuneration. This road is 1,800 miles long, and is in first-class condition throughout, being more or less macadamized its entire length. For purposes of transportation this road is invaluable, and in the event of an outbreak or a war it would prove of immense value to the military authorities. A road of this length and of this quality would be an object lesson in this country, and it would be of special usefulness, owing to the magnificent distances between your largest cities."

## Thoughts in the Face.

Trouble or passion, which in one instance is recorded in bold characters, in another may leave scarcely a visible mark; and it is obvious that a lean face will betray the story of emotional experience more readily than one covered with a mask of fat and a smooth skin. Every expression of the face, says Blackwood's, results from the contraction of definite muscles by means of the nerves, and as those muscles are most strengthened which are most exercised, it is easy to infer the effect of a long-continued dominant emotion on the face, even although it may exist in an individual too well-bred to allow his countenance to be distorted by the prevailing passion. Whenever the thoughts take their habitual direction, a stream of nervous influence from the brain to the hidden expression muscles is the inevitable concomitant. The subject himself may be unwarned as to what is going on, and the closest observer may not notice the vaguest tremor of movement. Yet, in the course of years, the muscles so stimulated assert themselves over the others, and a permanent impression in accordance with the mental character comes out.

The incessant flow of involuntary nerve-currents to the facial muscles doubtless accounts for the odd similarity of expression among men of the same vocation. It is not always easy to lay one's finger on the precise conditions of the environment which conduce to the facial characteristics; yet who is not familiar with the leading characteristics of the lawyer's type of face, the doctor's, the tailor's, the shoemaker's, the jockey's, etc?

The fact that two people who live long together tend to grow alike is accounted for by unconscious mimicry reacting upon the muscles of expression in the same way as a ruling passion does. This tendency to facial imitation is very general—in fact, almost universal—but apart from this the daily exhibitions of one set of emotions by the one person will almost invariably awaken corresponding emotions in the other.

## A Wonderful Change in Chappie.

Chappie left the hotel piazza announcing that he was going to his room to put on his white flannel suit. He returned in half an hour and the girls were surprised to see that he had no alteration in his attire.

"I thought you went to change your suit," said Lucile.

"Yes, but I changed my mind."

"How delightful," said Gracie. "Then we may expect you to really entertain us this evening."

Chappie was pleased for the moment, but has been wondering since whether there was not some hidden meaning in the lovely girl's remark.—*Newark Call*.

## A Summer's Day Incident.

The young man with the pepper and salt suit, the yellow shoes and the straw hat bound about by a varicolored ribbon was walking just ahead. He seemed to know that he was made up for display, for he kept looking in at the show windows and pulling down his cuffs. At the corner one of those sudden gusts of wind which seem to come from nowhere blew off his straw hat, the one with the varicolored ribbon.

He made a grab with both hands, but it was too late. The wind had taken it off his head.

He saw a hat rolling down the street, traveling on one edge. Of course he was after it.

"Go it," shouted a policeman.

"Hooray," yelled the corner newsboy.

The pedestrian found time to stop and encourage him in his chase. But the hat had a long start on him, and the wind was holding out. Once he saw the hat topple over and lie quietly on the cobble stones for a moment. Then a puff of wind raised it and sent it wheeling along at an increased speed.

He did not hear the jeering laughter of the teamsters. With lips firmly set and nostrils distended he ran, gaining every moment. Once he was delayed. The hat ran under a coal wagon, and he had to go around. At last the hat ran into the curbstone near a corner street lamp, and with a pounce he was upon it.

All flushed and breathless, he picked it up, and then leaned up against the lamp-post to rest.

A man also flushed and breathless, came running up and took the hat out of his hands.

"I'm much obliged," said he.

"For what?"

"This is my hat."

"Where's mine, then?"

"Hanging behind you at the end of the string."

Sure enough he had forgotten all about his new hat string.—*Chicago Record*.

A PROPOSITION to forfeit the land granted by the government to certain railways of the west and south which have not completed their lines within the legal period is now before the house committee on public lands. Under the operations of this bill the Northern Pacific railroad would lose 37,000,000 acres of land; the Southern Pacific, 4,000,000; their California and Oregon branches, 4,000,000; the Chicago, St. Paul, Minneapolis & Omaha, 1,500,000, and the St. Vincent extension of the St. Paul, Minneapolis & Manitoba road, 1,000,000 acres. Twenty-five roads in all would be affected by the bill.—*Railway Age*.

**LIVE WHILE YOU LIVE.**

I sometimes think never blows so red  
 The rose as where some buried Caesar bled;  
 That every hyacinth the garden wears  
 Dropt in her lap from some once lovely head.  
 And this reviving herb whose tender green  
 Fledges the river lip on which we lean—  
 Ah! lean upon it lightly! for who knows  
 From what once lovely lips it springs unseen?  
 Ah! my beloved fill the cup that cheers  
 To-day of past regret and future fears:  
 To-morrow! Why, to-morrow I may be  
 Myself with yesterday's seven thousand years.  
 For some we loved, the loveliest and the best,  
 That from his vintage rolling time has prest,  
 Have drunk their cup a round or two before,  
 And one by one crept silently to rest.  
 And we that now make merry in the room  
 They left, and summer dresses in full bloom,  
 Ourselves must we beneath the couch of earth  
 Descend—ourselves to make a couch—for  
 whom?  
 Ah! make the most of what we yet may spend,  
 Before we, too, into the dust descend!  
 Dust unto dust, and under dust to lie,  
 Sans wine, sans song, sans singer and sans end!  
 —Fitzgerald Translation of Omar Khayyam.

**Oldest Living Engineer.**

George Watson, the oldest living engineer between Pittsburgh and New Orleans, is celebrating the 77th anniversary of his birthday, having attained that age at 9:30 A. M., August 16th. Mr. Watson was born in 1817, at the corner of First avenue and Ross street. He commenced steamboating in 1830, going as cabin boy of the steamer Allegheny, an Allegheny river packet. He later learned the trade of engineer, and worked on almost every packet of note that run in the trade between this port and the South from 1835 to 1860. He was for a number of years engineer of Brown's mill. His last steamboating was done on the ferry boat William Thaw.

Mr. Watson has a wonderful memory and can relate incidents that happened seventy years ago, when Pittsburgh was but a village and there were few houses in Allegheny. His mother was born in 1775, the year before the Declaration of Independence was signed, and she was the youngest of eight children. She was born adjoining the spot where the Hostetter factory now stands. Mr. Watson says his grandfather helped to make a treaty with the Indians here. And he can trace the two last generations of his ancestors back 140 years. All that part of Pittsburg lying in and about Smithfield street was owned by his grandfather, and was known as Smith's field, and that street was named in his honor.

Mr. Watson can well remember when the old penitentiary was built on Ohio street. He said that at that time there were only four houses standing on Federal street. He can readily note the changes which have occurred in Pittsburg and Allegheny since 1825. He is enjoying very good health, and says he is only a boy. He can be seen almost any day strolling along the wharf.

ANOTHER narrow gauge road, the Houston East & West Texas, 232 miles long, has joined the great majority by widening its track to 4 feet 8½ inches. The disappearance of the narrow gauge within a few years has been remarkable, and yet the species is by no means extinct, for we count up in the Official Guide 96 roads in the United States of that class—nearly all of 3 feet gauge, with a few varying from 2 feet to 3 feet 6—besides a number in Canada and Mexico. There is no reason to doubt that the capacity of these narrow roads is fully equal to the demands upon them. The C., B. & Q. company owns two narrow gauge roads in Iowa, and Manager Law says that they carry standard gauge loads and make standard gauge time, running 50 miles an hour or more with steadiness and ease. There is no doubt that the 3 feet gauge roads have some considerable advantage in respect to economy over the wider roads, and where through traffic is not an important element, their service is entirely satisfactory. We expect to see some more 3 feet and even 2 feet roads built to meet special conditions, though the general tendency will be in the direction of uniformity of gauge and equipment, and the widening of narrow roads will not entirely cease for some time.—*Railway Age*.

**Foreordination.**

Years ago an old hardshell preacher, who lived on the border in the days when the Indians were at war with the whites, was making preparations one morning to go to his church, miles away, through a country infested with the savages. He was carefully loading his old flint-lock rifle to take along, when a friend present remarked:

"What are you going to take that gun along for, old man? Don't you know that if it is foreordained for the Indians to kill you, the gun won't save you?"

"That's very true," said the old man, as he deliberately rammed the ball home, "but suppose it is foreordained that the Indian shall be killed? Now, how would the good Lord carry out his purpose if I didn't have my gun along?" That closed the debate.—*Summerville (Ga.) News*.

**His Will.**

The rich old man with a young wife was having a hard time trying to make her coincide with his idea of what her duties were with reference to himself.

"Madam," he exclaimed after a heated argument, "I tell you I shall mould you to my will."

"That's easy enough," she retorted. "Only make it in my favor, and I'll attend to the balance."—*Detroit Free Press*.

## 'Tis a Little World After All.

Two Americans were introduced to each other not long ago in a London house, where they were dining with a company of English acquaintances. One of them told a story of the civil war as an illustration of the relish which an eager appetite gives to an unexpected dinner, says the *Youth's Companion*.

It was an incident of the military operations of the Union army on the North Carolina seaboard. The narrator was an officer who was with a strong column in a forced march from the coast. The troops had started before daybreak, and had rapidly approached the Confederate position by a circuitous road.

At noon they halted for reinforcements, having discovered the Confederates strongly entrenched in front of a small town.

The American who sat on the opposite of the table from the narrator put in a word. "I know that country well," he remarked. "I was there on the day you mention, but behind the earthworks, not in front of them."

The Union officer, after expressing surprise that his account should be confirmed so unexpectedly, went on with his story.

"I was desperately hungry," he said, "and knew that the provision train would not arrive for several hours. Noticing a small house not far away on another road leading to the town, it seemed to me that it could be approached without observation from our road by a detour through the woods, and that I might find there something to eat."

Then he told how he crept through the woods with half a dozen scouts and made a dash for the house, noticing as they entered it three officers in gray riding rapidly away toward the town.

Again came an interruption from the other side of the table:

"I was one of those horsemen. We had been taken by surprise, and, after finding out how strong was the column on the main road by using our field glasses from the upper windows, we had started in hot haste for headquarters in town."

Everybody at the table smiled as the story was resumed.

"We found a colored woman inside who told us that she had cooked a dinner for three Confederate officers, but that when it was ready they had suddenly mounted their horses and hurried away."

"The table was spread and a fine goose roasted to a turn was on a platter, with baked sweet potatoes and a bottle of wine. We posted one man guard, and then sat down. It seems to me I never enjoyed any other dinner so much as I relished that stolen goose."

"I believe you," said the other American. "That was my goose, and I had paid for it. My mouth watered for it when I left the house."

The company laughed heartily as the two veterans, who had once fought in opposing armies, but were then dining at peace in London, compared notes about the goose.

The world did not seem so big after all, when these two men could discover each other in an English house after thirty years, and laughingly agree that it was a good goose, whoever paid for it.

## Death From Fright.

"During my forty odd years of practice I have never seen but one case where death was caused by fright," remarked Dr. L. M. Alderoy, a prominent New York physician. "The instance I speak of happened in South America, at which time I was making a tour through that country. It came about in this way: One afternoon we experienced a rather severe shock of earthquake. Some time before the shock was felt a young Mexican who was employed to work about an anatomical museum in the town where I was then visiting fell asleep in a chair in the room which contained all the ghostly relics. Suddenly he was awakened by an extraordinary noise, he was horrified to see all the death's heads nodding and grimacing, and the skeletons dancing and waving their fleshless arms madly in the air. Speechless with terror, the poor fellow fled from the frightful scene, and upon reaching the street fell to the ground unconscious and half dead with fright. After a few hours he became somewhat rational, and it was explained to him that it was an earthquake that had caused all the commotion among the specimens, but the shock had been too severe, and his death followed in a few days."

## Modern Surgery.

There are three locations, so to speak, the absolute cleanliness of which must be above suspicion before the operator is justified in proceeding to his work. These are the surgeon's hands, his instruments and the integument covering the part of the patient's body at which the operation is about to be performed. How is the requisite cleanliness in each case secured? So far as the hands are concerned, by profuse scrubbing with a nailbrush in soap and hot water, followed by a thorough drenching in some antiseptic solution, as that of 1 in 2,000 of perchloride of mercury. So far as the instruments are concerned, by sterilizing them—that is, by boiling them in water, or by passing them through the flame of a spirit lamp, or placing them in a steam sterilizer, and then, when the operator is ready to begin, by putting them into a receptacle

containing an antiseptic solution—as, for example, that of carbolic acid. Lastly, so far as the patient's integument is concerned, by washing the part first thoroughly with soap and water, having previously shaved it, if necessary, and afterward with a perchloride of mercury solution, or, if the part be greasy, by removing all the greasy material by scrubbing it with ether.

Without going into further details these are the cardinal precepts of the science of operating in the present day. Of course each wound which in this manner is made under aseptic conditions, as it is called, is kept aseptic by the use of antiseptic dressings until healing has taken place. The results of this method of treatment of wounds are nothing less than wonderful in comparison with those which the earlier surgeons were able to obtain. What happens after, say, the amputation of a limb nowadays? The rule is, nothing—nothing, that is to say, beyond the uneventful convalescence of the patient.

The dressings are not touched unless the temperature and the pulse of the patient indicate, by some disturbance, that it would be expedient to examine the wound. The temperature and the pulse are the surgeon's guide. He takes his cue from them. Nothing can be amiss in the wound if these remain normal, and thus it follows that a large wound, such as that following an amputation, heals soundly from first to last without any suppuration. What a contrast with that which obtained in former days! Suppuration was then thought to be an indispensable part of the healthy process of healing. In the present time, on the contrary, a surgeon is held to have failed in his practice of the principles of surgical cleanliness if, in wounds originally aseptic, suppuration occurs.—*Nineteenth Century*.

### Common Sense Food.

The educated have only glimmering ideas as to what their children should eat—half of them, till a few years ago, had a sort of horror of sugar, one of the most nourishing of all substances—and the uneducated have positively no idea upon the subject. They just eat and give their children what they can get. It may be said that this is inevitable, because the majority in all countries are too poor to do anything else; but is that true?

We are not pretending to be experts, but if we understand what professionals say, much of the best food produced in the world is also the cheapest. Oatmeal, for example, is better than rye bread, and it is cheaper than either. Hardly anything in the world is as nourishing as lentils, which might be sold cheaper than bread, and eaten, too, with dripping, an invaluable combination. Millet, on which the big races of India grow

so tall and strong, might, if there were a demand for it in Europe, be far cheaper than wheat, and so might "corn flour," on which Kentuckians, the strongest race in America, are bred, though that requires mixture with a less nitrogenous diet.

We entirely admit, and never remember without a sense that the world on some points is topsy-turvy, that the best of all foods for children, milk, is in this country, and this country, alone, almost unprocureable for them; but even that fact is hardly known, or is not believed, for if it were understood our first demand of the philanthropist would be low railway fares for milk.

Of course, there are plenty of prejudices about food—some years ago the Suffolk laborers would not touch fish, because it was used as manure—but they are none of them insuperable. Most of them arise from difficulties about cooking, or from the sheer dislike to anything new, which for years checked the sale of the tomato and the plantain. Now everybody eats tomatoes, and if plantains could be reduced to their proper price, say sixpence a bunch, no commercial fleet would be able to cope with the demand.—*London Spectator*.

A well known business man is spending the summer at a country boarding house in Montgomery county, and his interesting family of a wife and three tiny misses are with him. The other night when Mrs. W. was saying good night to the angels the eldest asked for something to eat.

"I'm sorry, darling," said the devoted parent, "but there is not a thing to eat up here, and everything is locked up down stairs."

"Ain't there a cracker here?" inquired the little one, wistfully.

"No, darling."

"Ain't there even a real old piece of bread?" continued the hungry sufferer.

"No, precious, not a thing."

The little one sighed wearily, then she brightened up with hope as a bright idea struck her.

"Then, mamma," she queried plaintively, "won't you please give me a pill?"

That baby got a generous slice of buttered bread, despite all obstacles, after that remark.

### Misunderstood.

He had an auburn-haired girl and promised to take her out riding. She met him at the door when he drove up in a buggy and exclaimed:

"Hello! Ready?"

She misunderstood him and they don't speak now. Thus slang makes another slap at love's young dream.—*Texas Siftings*.

### The Nation's Wealth.

The latest bulletin which has been issued by the census bureau, that on the wealth of the country, is one of the most interesting and suggestive documents ever issued by the government. According to this bulletin the assessed value of all the property in the country in the census year of 1890 was \$25,473,173,418, of which amount \$18,956,555,675 represented real estate, and \$6,516,617,743 personal property, which includes live stock on farms, as well as machinery of all sorts in mills, mines and factories and product on hand, telegraphs, telephones, shipping, railroads and rolling stock, money of all sorts and every kind of property outside of what is ordinarily classed as real estate and the improvements thereon. This is the value set for purposes of taxation. The true valuation, that is, the sum for which this property could sell in a normal market, was computed at \$65,037,091,197, of which amount \$39,544,544,333 represents real estate and the improvements thereon, and \$25,492,546,864 personal property.

For the purpose of this computation the census officials divided up the states and territories into six groups. The true value of the property of all sorts in the North Atlantic division—the New England states and New York, New Jersey and Pennsylvania—is put at \$21,435,491 864, that of the South Atlantic division—the states beginning with Delaware and ending with Florida, including the District of Columbia—at \$5,132,980,666, that of the North Central division—Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, the Dakotas, Nebraska and Kansas—at \$25,255,015,549, the South Central division—Kentucky, Tennessee, Alabama, Mississippi, Louisiana, Texas, Oklahoma, Arkansas and the Indian Territory—at \$6,401,281,019, and that of the Western division—beginning with New Mexico, Colorado, Wyoming and Montana on the east, and taking in all the states and territories westward to the Pacific—\$6,811,422,099. In order of wealth the states along to and including Missouri rank in this order: New York, \$8,576,701,091; Pennsylvania, \$6,190,746 550; Illinois, \$5,066,751,719; Ohio, \$3,951,382,384; Massachusetts, \$2,803 645 447; California, \$2,533,733,627; Missouri, \$2,397,902,945.

A comparison of the figures of recent censuses shows a striking increase in the wealth of the United States. The true value of the country's property amounted to only \$308 per capita in 1850, while it was \$514 in 1860, \$780 in 1870, \$870 in 1880, and \$1,039 in 1890. In 1870, however, the value was stated in the depreciated currency of that period. After changing the value to the gold level the figures for 1870 would be \$906 instead of the \$870 stated in the cen-

sus report. A truly marvelous growth is represented by those figures. The increase in population in the United States, which is more rapid than in any other great country in the world, is largely exceeded by the expansion in the value of property. Contrary to the popular assumption, some of the states in the Rocky Mountain region and farther west lead in per capita wealth, Nevada standing first with \$3,941 per inhabitant, and other places in the same region are also represented by high figures, but this is due to the estimates of the value of mining property, which value has been largely reduced since 1890. Outside of the mining region Rhode Island leads with a per capita wealth of \$1,459, while New York's figure is \$1,430. Missouri in per capita wealth is far down on the list, ranking as thirty-three among the states and territories. Her figure, however, which was \$895 in 1890, and only \$720 in 1880, shows a handsome growth in the decade.—*St. Louis Globe Democrat.*

### Fables of the Phoenix.

The paragon of all fabulous creatures was the bird described by the ancient writers under the title of the "Arabian phoenix." Ovid says: "Although most beings and things have their origin in other individuals of their own species, there is one remarkable exception to this general law—the miraculous bird called the 'phoenix,' which reproduces itself. According to a belief which Herodotus heard expressed at Heliopolis, the famous Egyptian 'city of the sun' this 'miraculous' bird visited that place once every five hundred years—always coming from the direction of Arabia—on the occasion of its father's death, and always buried him with peculiar ceremonies.

According to the best evidences which can be gathered from the writings of Ovid, Pliny, Herodotus and Dion Cassius, after the phoenix had lived his allotted lifetime of five hundred years he selected a spot and prepared his own deathbed, which consisted of a sort of nest, or funeral pyre, made of leaves and branches of the oak, ears of sweet spikenard, cinnamon bark, yellow myrrh, etc. Seating himself upon this he flapped his wings with such velocity as to cause the nest to take fire. After bird and nest had been consumed, a little worm appeared in the ashes and rapidly developed into a full-fledged phoenix. The first care of the new bird was to arrange for the sepulchre of his father's ashes, which Herodotus describes as follows:

"With the myrrh and other gums it has amassed the phoenix fashions a ball as large as it can carry. This ball it hollows out, and in the hollow places puts the ashes of the dead parent. The ball is deposited in the nest, and the young phoenix carries the

whole from Arabia to Egypt for the purpose of interring its father's ashes at the 'city of the sun.' Having reached its destination it lays its burden down upon the altar of Helios and disappears as mysteriously as it had come." The legends connected with this fabulous bird vary in some of their details, but all agree in the statement that only a single bird of the species was living at any one time.

### An Office Drama.

It was Friday night. The telegraph editor felt in his pocket and glanced contemplatively at his watch.

"What have they got to-night?" he said finally, addressing the assistant telegraph editor.

"Pork and beans, stewed tomatoes and apple pie," was the reply.

"And"——

"It's all right. Dead swell layout."

The telegraph editor ruminated and again felt in his pocket. Then he remembered a little indebtedness of 25 cents.

The copy boy entered.

The telegraph editor scribbled on a piece of paper.

"Take this to the assistant city editor and be dod gasted quick about it," said the telegraph editor. He handed the copy boy a piece of paper which looked like this:

25c.		25c.
	WELL?	
25c.		25c.

The copy boy took the paper into the sporting editor's room, where he stopped to listen calmly to the arrangements for a prize fight; then he went out into the area way and threw paper wads at the watchman.

Then he went into the local room and threw a crumpled piece of paper on the desk of the assistant city editor.

"His nibs sent that to yeh," he remarked, pushing the paperweight off the desk onto the toe of the Constant Reader.

The assistant city editor apologized to the Constant Reader and looked at the paper. Then he drew a half dollar from his pocket, carefully laid the paper over it and rubbed it with the butt end of his lead pencil. Underneath the rough facsimile of the coin he wrote:

"Please send back the change."

"There, take that back, quick," said he.

The copy boy went into the dramatic editor's room and put a mustache on the latest photograph of Helene Mora. Eventually he reached the telegraph room and handed the paper to the telegraph editor. The telegraph editor studied it for a full minute. Then he remarked calmly:

"That's the grouchiest guy that ever struck this joint. He ain't even got manners enough to pretend that he's broke."

Then the telegraph editor pulled his chair up to his desk and wrote a head to the gold exports, which began, "Millions in Our Pockets Still."—*Cincinnati Commercial Gazette*.

"We should hardly expect to learn much about the arts of civilized life from the tribes of Central Asia," remarked Walter B. Brooks of Birmingham, Ala., "and yet according to some of our most noted explorers the inhabitants of western Mongolia know how to make better brick than we can make. They use about the same material as we do, and singularly enough the thing that gives superiority to their process of brick making is one of the most powerful agents of civilization, steam. When the brick have been baked for three or four days, the opening in the oven is closed up with felt, which is kept wet, so that the bricks, still intensely heated, are enveloped in steam. This process causes a remarkable change in the character of the brick. From red they turn gray in color, and at the same time they acquire a remarkable degree of toughness and hardness, and resist the effects of the weather much better than do the bricks of Europe and America. Necessity, as usual, was the mother of invention in this case, for the climate in which these ingenious Mongols live is subject to great extremes of temperature, which have a disastrous effect upon brick made by the ordinary process."

It is announced from Washington that the United States will bring suit against the Central Pacific railroad as a corporation for the sum of \$27,855,680, with interest thereon at the rate of 6 per cent. for a period of thirty years, the total amount of the suit being for \$78,095,904; also that the government will bring suit against the Union Pacific and the Kansas Pacific railroads, as two associated corporations, for a total of \$33,539,512, with interest at 6 per cent., also for thirty years, the amount due from these roads being \$92,910,633.60. The grand aggregate for these suits against the three roads will be \$171,006,537.60. It is stated that the government will seek to prove that the sinking funds intended to be used for payment of the debts to the government incurred in the construction and operation of the roads have been diverted to other purposes, and that corporations and also the original stockholders are liable therefor. The inauguration of so gigantic a scheme of litigation as is thus suggested would be an immense boon to the legal fraternity, whether or not it ever reached a termination—in fact, the longer it was continued the better for the lawyers.—*Railway Age*.

### A Story About Senator Call.

Some gentlemen who were sitting in the lobby of one of the best known hotels the other night fell into a reminiscent mood, and the stories told included this about Senator Call, of Florida:

It was in 1876. The returning board was considering the question of awarding the electoral vote of the state. One of the members of the board was Samuel B. Macklin. The day after the decision was made in favor of the Republican presidential candidate Macklin asked a friend of his named Morris to go driving with him. Macklin seemed strangely excited, and Morris agreed to go providing he should be allowed to handle the reins. This was agreed to, and as the two drove along they got into an animated discussion of the action of the board. While this was at its height they passed the residence of Wilkinson Call. A little farther on they were passed by Call, who had started out in a buggy. Macklin immediately stopped his defense of his action as a member of the board and declared to Morris as Call passed them:

"I mean to kill that man. If there is a man in the world I hate, he is the one."

For a moment Morris thought nothing of his companion's words, but suddenly Macklin turned, drew his pistol hastily from his hip pocket, pointed the weapon at Call's carriage and fired. Fortunately Morris regained his presence of mind. He seized the reins tighter with one hand, while with the other he struck the hand containing Macklin's pistol, and talked to the horse, which was frightened by the report of the pistol, in such a way that Call, who was not hurt, should think that Macklin had shot at something along the roadside. Call evidently understood it so, for he merely turned his head and drove on, and it was fully 15 years before he knew that Macklin had ever tried to kill him. The latter has now been dead or some time.—*Cor.*

The young man who has had the priceless experience of self abandonment to some happily chosen point was well illustrated in a man I knew, writes G. Stanley Hall in the *Forum*. With the dignity and sense of finality of the American senior year quick within him his first teacher in Germany told him to study experimentally one of the seventeen muscles of a frog's leg. The mild dissipation of a somewhat too prolonged general culture, aided by some taste for breezy philosophic speculation, almost diverted him from so mean an object. But as he progressed he found that he must know in a more minute and practical way than before—in a way that made previous knowledge seem unreal—certain definite points in electricity, chemistry, mechanics, physiology, etc., and bring them

to bear in fruitful relation to each other. As the winter proceeded the history of previous views was studied and broader biological relations seen, and as the summer waned and a second year was begun in the study of this tiny muscle it was seen that its laws are the same in frogs and men; that just such contractile tissue had done all that man had accomplished in the world, and muscles are the only organs of the will. As the work went on many of the mysteries of the universe seemed to enter in his theme. In the study of this minute object he gradually passed from the attitude of Peter Bell, of whom the poet says:

A primrose by a river's brim  
A yellow primrose was to him,  
And it was nothing more—

up to the standpoint of the seer who "plucked a flower from the crannied wall" and realized that could he but understand what it was, "root and all, and all in all, he would know what God and man is." Even if my friend had contributed nothing in discovery to the temple of science, he had felt the profound and religious conviction that the world is lawful to the core, and had experienced what a truly liberal and higher education—in the modern as distinct from the mediæval sense—really is.

### Carnot and Seven.

An interesting discovery has just been made by a contributor to a French periodical, who has apparently a touch of superstition in his character concerning numbers. Whether or no he believes in the mysterious and uncanny influence of number 13 is not stated, but he points out that the unfortunate President Carnot was throughout his life under the influence, so to say, of the figure 7.

He was born in 1837 and entered the Ecole Polytechnique in 1857. He became president of the republic in 1887 by virtue of the seventh article of the constitution. On the 17th of May in the present year he presided at the centenary fetes at the Ecole Polytechnique. He died in the fifty-seventh year of his age and in the seventh year of his presidency.

In the carriage in which he was seated when assassinated there were, including the driver, etc., seven persons, the crime being committed on a Sunday, the seventh day of the week, by Cesario, an Italian, there being respectively seven letters in these two words.

To conclude this list of sevens, it is pointed out that M. Carnot's remains were laid in the tomb in the seventh month of the year and on the seventh day after the murder was committed. It might be added that Cesario came from Cete to commit it, and that the pronunciation of Cete and sep (seven) is identical.—*London Standard*.

**A LAW GRADUATE.**

He has just come out of college  
With his head crammed full of knowledge.  
So he thinks! So he thinks!

He will surely make a hit,  
With his arguments and wit.  
So he thinks! So he thinks!

He will argue like a sage,  
Though but 20 years of age.  
So he thinks! So he thinks!

He has come the courts to alter,  
In his works he'll never falter.  
So he thinks! So he thinks!

But he'll run against a stump  
And receive a great big bump.  
So we think! So we think!

He will learn he's sometimes wrong  
And his points not always strong.  
So we think! So we think!

He will learn life's hard and dreary.  
That courts don't run by theory.  
So we think! So we think!

And he'll say: "I have very oft  
Been very green and very soft."  
So we think! So we think!

—*New York Sun.*

**Customs of Costers.**

A writer in the London *Quiver* says that the costers are now a large class. Though the coster's work is extremely hard and his profits are precarious he lives for a good purpose. When he speaks of himself as "a general dealer," he means that he trades in anything which enables him to turn an honest penny. His ordinary mode of life is even lower than is meant by living from hand to mouth. When he turns out in the small hours of the morning to look round the markets, he may not even know whether his traffic for the day will consist in fish, vegetables or fruit. He may take a hasty penny breakfast in the street and then go to Billingsgate with the idea of "loading up" with the first, only to find that everything is too dear, and then he must hie away to Spitalfields or Covent Garden. When he thus arises with the lark, he cannot tell whether he will have "a good day" or a very poor one.

The most despairing time of all is when the markets all round are too dear to allow of the barrow being "loaded up." If the coster can clear 3 or 4 shillings in the day, he will not be down-hearted, and should he earn nothing, or even make a loss, he looks at the matter as philosophically as one could expect. There are shrewd business men among the costers who rise into thriving shopkeepers. The bank establishment for their own use teaches them to save, and the evening for receiving deposits will be one of the liveliest of the week. The fact is also learned that there is strength in unity, so that the London Union of General Dealers in its way exercises as far-reaching an influence as a city guild.

The chairman might correctly have described himself in the words of one of his

brethren, "I ain' a eddicated person, but I know wot's wot." He proved this characteristic by rising into a thriving tradesman, having one or two shops, and when on one occasion his errand boy stole a box containing nearly 100 sovereigns the police would not believe that such a man had so much money to be stolen. The fact was as stated, however, and the "general dealer" still continued to make progress, while he was well known to Lord Shaftesbury, who publicly alluded to him as "My friend—." At first sight it may appear to be a humble thing to be a leading spirit among such humble folk, but in a way there is ample scope for administrative ability and enterprise.

**Europe's Torch of War.**

After the dreadful Franco German war of 1870-71 the principle of prolonged military service and of diminished annual contingents was given up. The monstrous principle of universal service was adopted instead. By this principle the whole nation is under arms.

A country is no longer a country; a people is no longer a people; a nation is now nothing but an army, and a country is only a barracks. Everybody is *sur le qui vive*. If war breaks out to-day, all professions become deserted, all functions abandoned; the life of the nation stops, so that national activity may be said to begin again only with the blood that is shed.

Moreover, before two hostile armies—that is, two nations when they are enemies—join in combat each of the two armies—that is, each of the two infinite hordes which traverse their several countries to meet eventually on the field of battle—will leave behind it a country in famine, its factories silent and its trade paralyzed.

Again, enormous stocks of food supplies must be accumulated on the frontier where the two armies are likely to meet, but before reaching these inexhaustible magazines the army must be fed while crossing their own territories, and that requires money. So that before even the first gun is fired each army will have expended enormous sums and left in its train towns and villages stripped of men and beasts, the cities in famine, the country without a single tiller of the field.—*McClure's Magazine.*

**Defense of Lying.**

It is an awful wicked thing to tell a lie, no doubt; but what an uncomfortable world this would be without lying! Families would be rent asunder, friends would become enemies, and language would become extinct, for nobody would be upon speaking terms with anybody else.—*Boston Transcript.*

### The Right to Get Rich.

In a recent address, Hon. Abram S. Hewitt forcibly defends the right to get rich as the essence of individual liberty. The constitution recognizes it, he argues, by investing all citizens with freedom of personal exertion for the promotion of their own welfare and prosperity, which includes the process of accumulation, of increase of property, according to the measure of individual ability. It is true, he says, that the few, and not the many, become wealthy, and that some large fortunes seem to be vile when contrasted with the numerous acres of small estates, or of no estate at all; but it would be an infinitely greater evil, he contends, if we should, even in order to get rid of the exceptional instances when he right to get rich has been perverted to fraudulent uses, adopt the policy of undermining the security of property, and taking away the incentive which success alone offers to industry, enterprise and honesty. The hope of profit and reward is the basis of all progress, he insists; and any theory which antagonizes that idea is false and pernicious. We have prospered beyond precedent as a people by reason of the sort of liberty which gives to every man the right to apply his energies in any direction, with the assurance of protection in the possession and enjoyment of all that he may acquire.

The inequalities that we see do not signify, as we are sometimes tempted to believe, that the philosophy of our political system and our industrial structure is illogical and unjustly discriminating. They are unavoidable under any system, and simply mean that men differ in degrees of capacity, and that they can not be artificially made and kept equal in that respect. "I have myself often felt a sense of grievance, which almost amounted to impatience," says Mr. Hewitt, "that some men could have so much more than others." But this does not seem such a wrong, he goes on to point out, when we reflect that if these superfluously rich men did not exist there would be very few people who would have a competence. They are to be regarded comparatively and according to the logic of general conditions. It is undeniable that the great mass of mankind enjoy more of the comforts and pleasures of life than they have possessed at any former time in the history of the race. There is much want and misery, to be sure, and probably always will be, but the fact remains, as Mr. Hewitt graphically declares, that "it is easier for a tramp to get a living in this world to-day than it was a hundred years ago for an honest and industrious man." The right to get rich does not condemn any class or any person to poverty. It merely offers the inducement that is the principal secret of success; and some men

profit by it more than others because they are more intelligent, energetic and persevering.—*St. Louis Globe Democrat.*

### A Hudson's Bay Post.

Life at a distant Hudson's Bay post, far from a railway, may seem a very quiet and uninteresting one to dwellers in busy towns, but quiet as it is the particular post in the district is the center of all life and animation for all the white men, half breeds and Indians within a range of many miles. There they come to hear the news and bring the backwoods gossip. At any hour of the day one or two Indians or half breeds may be seen listlessly hanging about the store or shop smoking, but talking little. Perhaps they have come in to buy something, perhaps they want to sell some skins—or very likely they are only loafing.

Often they come to see the manager simply in the hope of getting an advance of money or of stores on credit, previous to going on a prolonged hunting trip, when, if refused the first time, they will hang about for days, persistently and petulantly returning to the charge. But this advance is often allowed, repayment being taken when the furs come in in the spring.

The Indians look upon the manager of a Hudson's Bay post very much in the light of a father, and if he is a good hearted fellow, as he usually is, he in turn comes to regard them almost in the light of his children and to know the characteristics of each one of them. But, like a father with his children, he knows what is good for them and often in many ways has to deny them to protect them against themselves.—*Blackwood's Magazine.*

### An English May Day.

Baroness Burdett-Coutts clasped the gold chain and cross that Mr. Ruskin annually gives to the "May Queen" at Whitelands College, Chelsea, round the neck of Miss Emma Hands, the young lady elected to that pretty distinction by her fellow-students. The May Day observances began with a festal service in the college chapel, which was beautifully decorated with spring flowers; and after last year's "Queen Dowager" had gracefully abdicated, and a chaplet of apple blossoms had been placed on the head of the newly-found sovereign, an intricate May-pole dance was performed in the great hall while the "Queen" retired to assume her regal robes. Baroness Burdett-Coutts said that she hoped the day would be a pleasantly memorable one in all their young lives, and that the winner of Mr. Ruskin's beautiful gift would find it one of her greatest pleasures in the future to bring to other minds and homes some of the lessons of love and gentleness to be found in his works.—*London Telegraph.*

**MY SWEETHEART.**

'Twas a quaint rhyme scrawled in a spelling book,  
And handed to me with a bashful look,  
By my blue eyed sweetheart, so fondly true,  
In the dear old school days long years ago—

"If you love me as I love you  
No knife can cut our love in two "

That "Saunders' Speller," so tattered and torn,  
Has always a halo of romance worn.

And never a poet with honeyed pen  
Has written so precious a rhyme since then—

"If you love me as I love you."  
Ah, dear, you know I did—I do.

I've kept it safely for many a year—  
This dog's-eared, shabby old spelling book, dear,  
And now, as I hold it within my hand—

Again in the schoolroom I seem to stand—  
Reading once more, with rapture new—  
"If you love me as I love you."

How some foolish saying from out the past,  
Like a rose branch, is over the pathway cast,  
And the time of flowers, we still remember,  
Till winds blow cold in the bleak December.

God grant it always may be true—  
"That you love me as I love you."

—Carolyn L. Bacon.

**The Care of Tender Feet.**

First and foremost, the boots and shoes for summer wear should be half a size larger than those worn during the winter. Shoes are generally considered more comfortable than boots, and should certainly be adopted, if possible, in the summer, for they leave the ankle free and the circulation unimpeded. However, if boots must be worn, they should not be very high, as any additional pressure means additional suffering. It is hardly necessary, I hope, to mention that extremely pointed toes and really high heels should never really be thought of by any one who values peace of mind and comfort. The leather for summer footgear should be light, but not too thin, and brown in preference to black, when brown is suitable to the occasion.

The evil effects of tight lacing will be very soon realized by the woman who has tender feet; the undue compression adds tenfold to the pain, and very often the ankles, even of young girls who are silly enough to sacrifice their well-being for the sake of having a waist of 18 inches, are so swelled and inflamed by the end of the day that they are utterly shapeless.

In cases of this kind the remedy is not far to seek, but it is more difficult to relieve those who suffer legitimately, so to speak. The following treatment should be persevered in; it will give immediate relief, and, when practicable, should be resorted to twice a day. Do not wait until you go to bed, but if the opportunity offers when you come in, weary and footsore, apply the remedies then:

Soak the feet well in tepid water, to which a little ammonia has been added, and as the water gets cold pour in more hot to keep up the temperature. After drying the feet, rub them gently and thoroughly with a mixture made thus:

Add 1 ounce of the best linseed oil to the same quantity of lime-water, shake the bottle in which the ingredients are until a mixture about the thickness of cream is produced, then pour in half a dram of spirits of camphor, shake again, and it is ready for use. The feet, after being rubbed, should be wrapped in soft linen for a little while, and then powdered with boracic acid before the stockings are replaced. In the event of the feet and ankles being in a very inflamed condition, after soaking them as I have described, apply an arnica lotion, which will soon allay the discomfort. This is made by adding twenty drops of tincture of arnica to half a cupful of tepid water; saturate a piece of lint sufficiently large to envelop the entire foot with the lotion, cover it with a piece of oiled silk, and rest for an hour or two.

**The Niagara Falls Power Company.**

The supply canal leaves the Niagara river about 7,000 feet above the falls. It is 188 feet wide and 12 feet deep, with cut stone walls. From this canal water passes by gates and penstocks to the turbines. At present the wheel pit is constructed only on the western side of the canal. This pit is 21 feet wide, 179 feet deep and 150 feet long, and the turbines are now being placed in the northern end of it. The penstocks which supply the turbines are 7½ feet in diameter, and the turbines themselves, each of which is double, take the water at the center and discharge outwardly. These are five feet three inches in diameter, and each double turbine will develop 5,000 horsepower. The shaft from the turbines is of hollow steel, 38 inches in diameter and ½ of an inch thick. At bearings the shaft is solid and 11 inches in diameter. The turbines are so arranged that the weight of shaft, turbines, and gear is counterbalanced by the upward thrust of the water, so that when running the thrust will be on the bearings at the top. These are to run at 250 revolutions a minute. The breadth from the surface of the water in the canal to a point half way between the two double turbines is 136 feet. The tail-race is a tunnel 7,000 feet long, 21 feet high, 18 feet 10 inches wide, lined throughout with brick. It has a fall of 52½ feet, and opens at the bottom of the gorge, just below the upper suspension bridge, at the level of the stream.

**An Unsatisfied Boy.**

Old Gent—See here, boy, what do you mean by speaking so disrespectfully of your father?

Urchin—Well, I guess you would, too, if your old man wouldn't let you go in swimmin' only fourteen times in a whole day: dat's what.—*South Boston News.*

## Federation of Women's Clubs.

The National Federation of Women's Clubs has just finished an interesting annual meeting at Philadelphia. Nearly every woman whose name is identified with the advancement of women was present, and the field of activity in reform was thoroughly discussed.

A topic of particular interest in view of all that has been said and written was dress reform. The committee having the matter in charge said in its report: "The public has treated our various styles of dress very kindly, and the dual dress in some form is growing familiar in the bicycle suit as well as in the physical culture classes. These receive favorable comment and illustration in the daily papers. There are indications everywhere of a great change in public opinion within the year, and of an inquiring mind and desire for radical improvement in woman's dress. The attempt to make trousers look and behave like a skirt can never be very satisfactory. There is great need of experimenting, and of the comparison and criticism of experiments in dress by groups of interested women. I have seen nothing yet which seems to be entirely satisfactory to recommend for general adoption.

"We must work toward it bold, but not too bold. It seems absolutely necessary to destroy the fashionable ideal as fast as possible and I think the hideous newspaper illustrations of 'latest novelties' are helping us wonderfully; no lover of beauty with a grain of good sense can defend such out-lines." As a means of destroying Parisian influence it was decided to offer a prize for the best student's dress, and thus to secure the adoption of new ideas in the schools whence the influence of common sense might spread.

Another subject considered was divorce reform. The report of the committee deprecates any further legislation restricting freedom of divorce until the women of the United States have had ample time to form and express an opinion on every restriction proposed. The National Divorce Reform League, an organization composed wholly of men, comes in for a share of criticism. The women are suspicious of it because in none of its reports is any evidence shown that the real source of social evil is perceived—namely: the subjection and consequent helplessness of women.

Before the adjournment of the meeting the Federation adopted unanimously this resolution, suggested by the Breckinridge case:

"Resolved, That the Federation of Women's Clubs declares its belief that one standard is equally binding upon men and women, and that immoral conduct which

debars the one from public and social life should also debar the other."—*Albany Evening Journal*.

## Work, Not Talk.

Times never boom so that a lazy man will prosper. An idler can inherit wealth, and it slips through his fingers until in a few years he is a ragged loafer. No man or set of men can sit around on the stool of do nothing and make times better by theorizing on the financial question or discussing the rapid transit on which this country is going to the "demnition bowwows." It is true there are certain times when the conditions are better for general prosperity than at others, but as a main proposition an individual's prosperity depends solely upon himself and the country's prosperity upon the industry and frugality of its people. No legislation can alter this fact; neither can the enactment of any law make a professional loafer prosperous or keep an industrious, economical man from succeeding in life.

This is a lesson that people should learn. Success in the various occupations in life depends upon their own endeavor and not upon any legislation congress may enact. When people learn to work and think more and discuss politics less, an era of prosperity will dawn upon this fair land that will surprise even the most cynical curbstone prophet.—*Kansas City Times*.

## Paper Telegraph Poles.

One of the latest uses to which paper has been turned is the making of telegraph poles. The paper pulp employed is saturated with a mixture of borax, tallow and other substances. The mass is cast in a mold, with a cone in the center, forming a hollow rod of any desired length, the cross pieces being held by wooden keys driven in on either side of the pole. The paper poles are said to be lighter and stronger than those of wood and to be unaffected by the many weather influences which shorten the life of a wooden pole. It is doubtful, however, whether the paper pole will come to be anything like a rival to the iron pole, which is now high in favor for the carrying of all kinds of wire lines. The value of iron telegraph poles has been well tested under the most trying conditions on the line between Europe and India, and again across arid stretches of country in Australia. Insects that eat out the core of everything in the shape of wood, leaving the shell only, and bird borers that drill holes in the toughest of trees, let the iron pole pass, and even wandering tribes cannot chop it up for firewood, although down in Australia they have not yet quite gotten over their trick of making arrow heads of the insulators it carries.

**Mrs. U. S. Grant.**

Those who now meet Mrs. U. S. Grant find that though time has touched her gently, the resemblance to the young matron of former days is scarcely traceable in the elderly woman of to-day, attired still in widow's weeds. She has grown much more corpulent with advancing years; her brown hair changed to snowy white and the lines which time has drawn in a face possessing prominent features, indicate strength of character and common sense. In manner she is unaffected and gracious; her cordial greeting at once puts visitors at ease, who soon become charmed listeners to fluent reminiscences of noted people and incidents in her eventful life. On the occasion of our visit, to the suggestion that visitors might be an intrusion upon her time and tax upon her strength, she assured us that when her health admitted, the attention of strangers among whom she is thrown gave her pleasure. Meeting people has been so much a part of her life that should courtesies now be withheld she would feel somewhat neglected. She recognizes the fact that the desire of the public to meet her is influenced by admiration of her husband, which she regards as a tribute to his memory and which she is pleased to gratify. Mrs. Grant's life has been one of unusual excitement and activity. She is living now largely in the past, and what wonder, for who has such a past to recall.—*Housekeeper.*

**Cynical Metaphors.**

Man is said to be an animal that has a mania for getting up societies and making himself president. If the presidency has been already claimed, he contents himself with the position of treasurer. In a cynical old bachelor's opinion, ideas are like beards—men only get them when they grow up, and women never have any at all. It was probably another old bachelor who said, "Nature shudders when she sees a woman throw a stone, but when a woman attempts to split wood nature covers her head and retires to a dark and moldering cave in temporary despair." A spinster says: "Old bachelors are frozen out old gardeners in the flower bed of love."

A farmer said, "One thing I don't like about city folk—they be either so stuck up that yer can't reach them with a haystack pole or so friendly that they forget to pay their board."—*New York Despatch.*

**The Two Kittens.**

The once idea of a learned woman, angular, absorbed, unmindful either of the decurms of social usage or the charms of dress and manner, has long since given way before a better acquaintance with our fascinating women scholars, artists, professors,

physicians, architects and "divines." In fact, so completely changed from "all that" primitive notion as Moliere himself would admit, that he could no more write "*Les Precieuses Ridicules*" of any professional woman here than he could unwrite his *Tartuffe*, written for all time. It is an open secret that within one of the women's clubs in Philadelphia are two ladies who are known to one of their intimates as "the two kittens." They are so playful, so graceful, so apparently unostentatious in their casual conversation, so dainty, so thoroughly bewitching in their gayety. And yet upon one of these ladies will the university this spring place its dignified "degree" and upon the other has long rested the dignity of a presiding officer, with all the rules of "order" and parliamentary procedure at her finger ends.—*Household.*

**The Doll of Colored Children.**

Did any one ever see little colored girls playing with any other sort of dolls than white ones? Perhaps such little girls sometimes have black dolls, but the writer often sees them at their doll play in a street which is almost exclusively inhabited by colored people, and has never seen them with any but white dolls. Generally the dolls are quite blonde. It is not for want of black dolls in the stores; they are numerous enough, and are much favored by white girls. The reason for it is of course a very pathetic story—the long story of a race enslaved and despised until it has to a great extent lost its pride in itself and come to court another by a habit which is second nature. The mulattoes and quadroons are given a certain precedence and honor by the blacks, and the little mulatto girls will have none but white dolls, and blondes at that.—*Boston Transcript.*

**He Got the Russet Shoes.**

Oliver Van Ostend, the New York electric expert, is very fond of driving, and a day or so ago told his groom to have the mare he most favors for a spin in the park freshly shod. Being in a merry mood, he added, "If the blacksmith has any russet shoes, tell him to fit her out with that kind." What was his surprise to get a bill for a complete set of fine copper shoes, especially made to order; but, as the joke was on him, he paid up without protesting.—*New York Mail and Express.*

**Revenge.**

"That disagreeable Mrs. Highfi acted as though she didn't want to speak when she met me on the street, but I'll get even with her."

Florence—"What will you do?"

"Kiss her the very next time I meet her."—*Chicago Inter Ocean.*

### Two Conundrums.

me and bright young woman and is spending the summer evening this week she was at a young people, and some one you were going to dam the Miss- how would you do it?" The : "Why dam it you can't?" ening she was invited to a trip ver with a party. Her escort man who was not at the gath- previous evening. He proposed a: "If you came to a river when ry and the bridge were away ou cross?" The young woman's ere partly engaged with what g and partly with other things, g of the other conundrum, she ered: "Why d—it, you can't." and her consternation were a old. The balance of the even- ntly spent in explanations by oman.—*Buffalo Express*.

### The Kaffirs.

rs are great philosophers. If l die, the owner never grieves, : "Now I must go to work for white men who treat them well asters), and in six months he e a cow. It will have a calf. ll calf, in a year I'll have a pair should it be a heifer calf I'm er, for the next year I'll have nstead of one."—*New York Tri-*

NEW YORK CENTRAL earnings for the quarter ending June 30 (partly estimated) will show a falling off of \$1,885,000, notwithstanding an increase of 300 miles of road, but reduction of operating expenses has brought the loss in net earnings down to \$661,000. For the year the gross earnings are estimated at \$43,840,000, a loss of \$3,006,000 compared with last year, and net earnings will be \$14,221,000, which is only \$423,000 less than last year, the falling off having been to a large extent compensated by the severe reduction of \$2,672,000 in operating expenses. In spite of retrenchment, however, the profit over first charges lacked \$711,000 of being sufficient to pay the moderate dividend of 5 per cent.—*Railway Age*.

MOST people have an idea that rice paper, out of which cigarettes are made, is made of rice—99 out of every 100 smokers share this opinion. Rice does not enter into the composition at all, and the name is a misnomer. The so-called rice paper is made from the pith of a small tree which is indigenous to Formosa. It is found nowhere else, I believe. It belongs to the family which is represented in this country by the sarsaparilla. The pith is pure white. The stems are sent to China, where the paper is made. It is used largely by the Chinese artists for water color drawings. Those illustrated Chinese and Japanese books are made of it. The Chinese and Japs also dye the paper and make artificial flowers of it.

"It has been a popular opinion for some time," remarked Prof. L. D. Grey, of Montreal, "that certain diseases, such as carbuncle, cancer and their allies, may be transmitted from one animal to another, or from animals to man, by means of flies lighting upon the diseased spot and thence passing to a healthy subject. Although this is rather hard to believe, still it has been proved by direct experiment to be not simply probable, but an actual fact. This is not done by the ordinary blow or meat fly, but by the common house-fly, which, after coming in contact with a sore and thence passing to a healthy animal, imparts the infection to the latter."

### MY GIRL.

Last night I held her on my knee,  
The girl that I love best;  
That little head so dear to me  
Was pillowed on my breast.  
I held her little hand in mine,  
And kissed her o'er and o'er;

But then, you see, she's barely nine,  
And I am sixty-four,  
And if it happens that I be  
The grandad that adores  
The grandchild that takes after me,  
It's no concern of yours.

## GRAND LODGE.

**Assessment Notice for September.**

OFFICE OF THE GRAND LODGE, B. OF L. F.,  
TERRE HAUTE, IND., September 1, 1894. )

ASSESSMENT No. 48, \$2.00.

*To Receivers of Subordinate Lodges:*

SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the order, viz.:

CLAIM No. 1323. Robert W. McMullen, of Maple City Lodge, No. 198, was killed in a Collision, February 12, 1894.

CLAIM No. 1329. J. F. Brown, of Crystal Lodge, No. 408, was declared totally disabled by Blindness, April 5, 1894.

CLAIM No. 1330. Peter Whitmaw, of El River Lodge, No. 164, was declared totally disabled by Epilepsy, May 19, 1894.

CLAIM No. 1331. G. O. Spaulding, of Eastman Lodge, No. 134, was Drowned, May 20, 1894.

CLAIM No. 1332. Saml. Rowbottom, of Central Park Lodge, No. 237, was declared totally disabled by a Tumorous Growth, May 24, 1894.

CLAIM No. 1333. Thomas Chapman, of P. H. Sheridan Lodge, No. 388, was declared totally disabled by Hemorrhage of Lungs, May 28, 1894.

CLAIM No. 1334. T. C. Green, of Blue Mountain Lodge, No. 348, died of Paralysis of Heart, June 5, 1894.

CLAIM No. 1335. M. F. Murphy, of Champlain Lodge, No. 352, was Stabbed and killed June 8th, 1894.

CLAIM No. 1336. John M. Rummel, of D. J. Chase Lodge, No. 259, Fell from his Engine and was killed, June 10, 1894.

CLAIM No. 1337. J. S. Vinyard, of J. M. Dodge Lodge, No. 79, was declared totally disabled by Ankylosis of Knee, June 11, 1894.

CLAIM No. 1338. Thomas Hare, of Iron Range Lodge, No. 296, was Struck by a Switch Target and died, June 13, 1894.

CLAIM No. 1339. Joseph H. Rubbert, of Cerro Gordo Lodge, No. 29, was declared totally disabled by being Scalded, June 13, 1894.

CLAIM No. 1340. J. C. White, of H. C. Lord Lodge, No. 153, was killed in a Railway Accident, June 13, 1894.

CLAIM No. 1341. Wm. A. Rouse, of Pilot Lodge, No. 124, was declared totally disabled by Injury to Spinal Cord, June 19, 1894.

CLAIM No. 1342. Edward Cahow, of Stuart Lodge, No. 20, was declared totally disabled by Injury to Spinal Cord, June 20, 1894.

CLAIM No. 1343. George S. Flading, of Buffalo Lodge, No. 12, was declared totally disabled by injuries sustained Falling from Engine, June 21, 1894.

CLAIM No. 1344. James Anderson, of Franklin Lodge, No. 9, was declared totally disabled by Paralysis, June 21, 1894.

CLAIM No. 1345. James G. Warland, of Elkhorn Lodge, No. 28, died of Septemia, June 21, 1894.

CLAIM No. 1346. Arthur J. Bowers, of Green Valley Lodge, No. 223, was Struck by Train and killed, June 28, 1894.

CLAIM No. 1347. F. H. Humphrey, of Paul Revere Lodge, No. 485, was killed in a Wreck, June 29, 1894.

CLAIM No. 1348. John McCabe, of Triumphant Lodge, No. 47, was Shot and killed, July 2, 1894.

CLAIM No. 1349. C. A. Sterns, of Long Doubler Lodge, No. 334, died of Typhoid Fever, July 3, 1894.

CLAIM No. 1350. James Clark, of Mt. Tacoma Lodge, No. 192, was struck by Guard Post and killed, July 3, 1894.

CLAIM No. 1351. Thomas Gribble, of Headlight Lodge, No. 217, was declared totally disabled by Phthisis Pulmonalis, July 6, 1894.

CLAIM No. 1352. Jacob Herider, of Sprague Lodge, No. 133, was declared totally disabled by Disease of Lungs, July 7, 1894.

CLAIM No. 1353. E. F. Fleck, of Golden Eagle Lodge, No. 78, was killed in a Railway Accident, July 13, 1894.

CLAIM No. 1354. John Gatchell, of River View Lodge, No. 330, was declared totally disabled by Injury to Back and Lungs, July 13, 1894.

CLAIM No. 1355. Wm. Swatz, of W. F. Hynes Lodge, No. 48, was killed in a Railway Accident, July 13, 1894.

CLAIM No. 1356. Lewis L. Frampton, of Belvidere Lodge, No. 329, was declared totally disabled by having Leg Crushed, July 17, 1894.

CLAIM No. 1357. Harry A. Smith, of Omega Lodge, No. 316, died of Pulmonary Consumption, July 22, 1894.

CLAIM No. 1358. Jeff Davis Aront, of Lone Star Lodge, No. 70, was killed in a Collision, July 23, 1894.

CLAIM No. 1359. Eugene Flanagan, of East Albany Lodge, No. 215, was declared totally disabled by having Hip Crushed, July 25, 1894.

CLAIM No. 1360. John Laird, of Eureka Lodge, No. 14, was declared totally disabled by Fracture of Skull, August 7, 1894.

CLAIM No. 1361. Martin Glynn, of Falls City Lodge, No. 103, was declared totally disabled by Tuberculosis, August 11, 1894.

An assessment of Two DOLLARS (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls of membership August 31, 1894 (also for all members having taken a withdrawal (limited or final) after August 1st. and for all members who died or were totally disabled since that date), said remittance to reach the Grand Lodge not later than SEPTEMBER 30th, 1894, as provided by Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all the benefits of the order, as per Section 52 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

F. W. ARNOLD, G. S. and T.

Do You Want a Picture of the

## FAMOUS "999" LOCOMOTIVE?

We've had hundreds of letters asking for a picture—now we have it. Something better than a photograph. A **transparent**, copper-plate engraving of the famous flyer; you can see everything **outside** and **inside**. Every part is numbered and named. Fit for a gold frame in a palace. Printed on satin gloss paper, 14x28, and mailed in a tube (without folding) for 50 cents (stamps are good, but we would rather have postal notes or money orders). This is an educational device, up to date, unique, beautiful and correct. Once seen, no other picture of this beautiful locomotive will satisfy you at all. Send cash with order. **LOCOMOTIVE ENGINEERING, 5 Beekman St., New York City.**

If you are a subscriber, for 1894, to our paper, **Locomotive Engineering**, you get the above picture and our other little school masters, the **Traveling Engineer's Examination Chart** and the **Working Model of the Triple Valve**,

► **FREE.** ◄

The paper has over 40 large pages and is the best illustrated and **"most interesting railroad paper published."** Practical, instructive, interesting! No engineer, fireman or shop man can afford to be without it. Sent to any address in the world for \$2.00. Angus Sinclair and John A. Hill, Editors. Specimen Copy, free. Address

Write at once, as we shall send out samples for 60 days only. Address **THE NATIONAL MFG & IMPORTING CO.,** 334 Dearborn St., Chicago, Ill.

### \$100 Reward, \$100.

The reader of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly on the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials.

Address, **F. J. CHENEY & Co., Toledo, O.**

# Marks' Patent Artificial Limbs

## WITH RUBBER HANDS and FEET

ARE NATURAL IN ACTION, NOISELESS IN MOTION AND THE MOST DURABLE IN CONSTRUCTION.

Over 15,000 in use, scattered in all parts of the world. Eminent surgeons and competent judges commend the Rubber Foot and Hand for their many advantages. At every industrial exhibition where exhibited they have received the highest awards. They are endorsed and purchased by the U. S. and foreign governments. A treatise, containing 430 pages, with 300 illustrations, sent FREE; also a formula for taking measurements, by which limbs can be made and sent to all parts of the world with fit guaranteed.

To A. A. MARKS:

DEAR SIR: I was a professional tight rope walker and aeronaut before I lost my leg, and I do not allow the loss of a leg to compel me to seek another occupation. With your patent artificial leg I can walk a tight rope nearly as well as I ever could. The rubber foot enables me to balance with safety. The absence of an ankle joint removes the risk of falling to a large degree.

While walking on the ground I never feel the necessity of looking for uneven or bad places. I feel safe and sure on my rubber foot, no matter where I place it. I consider your invention of the rubber foot the most valuable and important to persons who have lost their natural limbs than any invention that has been made.

If any person doubts my ability to walk on a tight rope with an artificial leg applied, I will wager \$100.00 with them that I can perform for 30 minutes on a one and one-half inch rope elevated fifty feet above the ground.

Respy yours, PROF. F. E. JACOBY,  
157 Bank St., Waterbury, Conn.

RECEIVED THE HIGHEST AWARD AT  
WORLD'S COLUMBIAN EXPOSITION.

ADDRESS

A. A. MARKS,  
701 Broadway, N. Y. City.

SCIATICA AND RHEUMATISM.**

**"PULL YOUR LEG"**

Is less to fear with Railroad men than to Lose Your Leg. In the latter case you surely want to replace it with a **Patent Adjustable Slip Socket**. Warranted *not* to chafe the stump. Received the Gold Medal and the Diploma at the World's Fair. Also Gold Medal, Bronze Medal and Diploma at the California Mid-Winter International Exposition.

**LARGEST FIRM IN THE UNITED STATES.**

The Inner Socket, seen outside the limb in cut, is made over a plaster cast of the stump, giving an exact fit, being held permanently upon the stump by elastic fastened to lacer above, and in act of walking moves up and down in the Outer Socket, bringing all the friction between the two sockets, instead of between the stump and the socket as in the case of all wooden socket limbs. With our **SLIP SOCKET** the most tender, sensitive stump can be fitted and limb worn with perfect ease and comfort. Endorsed and purchased by the United States Government. Send for our new catalogue with illustrations.

---

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the out-puts have increased over 1,200 per cent. beyond all precedent, amounting during 1892 to 3,000,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

HIGHEST AWARD AND MEDAL, WORLD'S COLUMBIAN EXPOSITION

## THE OLD RELIABLE STANDARD METAL POLISH FOR ENGINE WORK

Firemen Should be Careful and Avoid Imitations.  
PRICES REDUCED FOR 1894.

For this year prices to firemen (as agents) will be: One pound boxes, per dozen, \$2. Three pound pails, per doz. \$5. Five pound pails, \$7.50 per dozen.

Cash must always come with orders to avoid delay.

Best Rock prices are here given to firemen as agents and they cannot and must not expect to buy from dealers at these prices. Samples sent free on application. Address,

**THE MATCHLESS METAL POLISH CO.,**

69 Frankfort St. New York.

88 Market St. Chicago.

### WHAT THEY SAY ABOUT OUR

ELDON, Ia., Dec. 18, 1893.  
DEAR SIR:—Please send me one of your seats for locomotive use. I find that they are the best seat for engine use that I have seen yet. I want it 24 inches long and 20 inches wide. Weight, 170 pounds. Send it C. O. D.

Yours respectfully,  
(Signed) W. T. BROWN,  
Engineer C. R. I. & P. R. R.

We refer by permission to the following users: D. J. Crowley, Engineer S. F. & W. Ry., 16 Jones st., Savannah, Ga.; Jno. Horton, Engineer Grand Junction, Colo.; Wm. Malloch, Engineer G. T. Ry., Belleville, Ont.

## ALL STEEL CAB SEAT.

**ROUGH RIDING MADE EASY.** Just put this seat in the box and lay your cushion on it. Made only of finest tempered steel spiral springs, heavy band steel bottom frame, and tempered woven wire fabric. Any size or shape desired. Usual size, 18x24. Price for seat not over 24 inches long, \$2.00. Terms, C. O. D. or cash with order. Please give your weight.

MANUFACTURED ONLY BY

**HAGGARD & MARCUSSEN,**

409 and 411 S. Canal St.,

CHICAGO, ILL.

CHAS. MILLER, President

## Galena Oil Works, Limited. FRANKLIN, PA.

### SAFETY, SPEED, ECONOMY

Are the results of the use of Galena Oils. Scientific and practical tests of the past twenty years have demonstrated the fact that Galena Oils are superior to any other oils in the market.

Galena Oils in winter stand a cold test of from ten to fifteen degrees below zero, and will not freeze in the coldest weather.

The superiority of Galena Oil is demonstrated by their exclusive use upon a large majority of the railways of this country. They are in use upon three continuous lines of railways from Boston and New York to the Pacific coast and on one to the City of Mexico, thus demonstrating their adaptability to all climates and all temperatures.

We also supply our patrons with Sibley's Perfection Valve Oil, which is in exclusive use upon a large majority of the leading railroads of the country.

When addressing our advertisers mention this Magazine.

**NOTE**—There are many injectors which will work well when the conditions are favorable. This injector is designed to work well under all conditions and is, therefore the most reliable.

**IT WILL RE-START ITSELF.**

**IT WILL ADJUST ITSELF.**

**IT WILL LIFT HOT OR COLD WATER.**

Its range of capacity is over 60 per cent. and it can be regulated, therefore, to work continuously for light or heavy trains. It is operated by a simple lever motion which readily starts and stops its action.

## BROOKS LOCOMOTIVE WORKS,

Dunkirk, N. Y.

Builders of Locomotive Engines for any required service from our own designs or those of purchasers. Perfect interchangeability and all work fully guaranteed.

# PERFECT RAILROAD WATCHES

HIGHEST GRADE

ROCKFORD

WATCH CO.

15 JEWEL

MOVEMENT.

GUARANTEED

TO PASS

RAILROAD

INSPECTION

**COSTS NOTHING  
TO EXAMINE.**

**Jos. Fahys & Co.'s "Montauk,"** dust proof, open face case, 10k gold filled, screw back and bezel, neatly and artistically engraved, and accompanied by the **manufacturer's signed guarantee to wear for fifteen years.** Fitted with No. 87 Rockford movement as described below,

**\$22.50.**

**American 14k Gold Filled Hunting Case,** elegantly engraved and finely finished, and accompanied by the **manufacturer's own guarantee to wear for twenty years.** Fitted with No. 84 Rockford movement as described below,

**\$25.15.**

The No. 87 Open Face and No. 84 Hunting Movements are the highest grade 15-jeweled movements made by the Rockford Watch Co. They have fifteen finest ruby jewels, in solid gold settings, Breguet hair-spring, patent micrometer regulator, fancy or double sunk dials, and are elegantly damasked in gold on solid nickel. They are fully adjusted to heat, cold and positions, will pass railroad inspection, as they comply with the requirements of railway time orders, and are acknowledged the best movements ever offered for the money.

With each movement is sent a signed and numbered guarantee and our agreement to clean and oil movement once a year for five years from date of purchase.

For the benefit of those who do not wish to purchase higher priced cases, we will furnish these movements in **Dueber Silverline Cases** at the following prices: No. 87, \$15.05; No. 84, \$16.60, and will allow a credit of 75 cents for the open face and \$1.25 for the hunting case (when returned) on any purchase of a solid gold or gold filled case for the movement made within one year..

**Samples** of these watches can be seen and purchased for above prices at any Express Office in the United States. If the agent of the express company doing business in your town has not samples on hand, write us, giving his name and name of the company, also stating which watch you wish to examine, and we will at once forward samples for your inspection. If the watch is satisfactory, pay the agent our price and he will deliver it to you, otherwise you do not pay a cent.

OCTOBER, 1894.

## CONSTITUTION FAILURE.

BY WILFRED P. BORLAND.

There comes a time in the life of the physical body when the powers decay, and the constitution of the individual is no longer able to meet the demands made upon it by the will of the individual. In the periods of childhood, early manhood and middle age, the constitution of the physical body is, with rare exceptions, able to meet all demands made upon it for action, and the individual is always, in a physical sense, in a position to be able to satisfy his wants and aspirations. But, with the period of old age decay manifests itself and the constitution of the individual becomes incompetent to perform its functions satisfactorily for its possessor. The individual finds himself constantly wishing to do things, right and proper that he should do, and the doing of which would contribute greatly to his happiness and peace of mind, but which he finds physically impossible for him to do; his physical constitution is no longer equal to the demands made upon it by his will; it fails to perform its functions as its possessor wishes them to be performed. This period of constitution failure and decay ends in death for the individual, as there is no process known to science whereby one may renew his physical constitution. The search for some elixir of life, some fabled fountain of youth; in other words, for some means of regenerating the physical constitution of the individual man, has been prosecuted with vigor in all ages of the world and in all stages of civilization of which we have record. But this search has been productive only of failure and disappointment, except in the field of romance where the topic is a copious one, and it has led to some of the darkest tragedies recorded in history. It is the inexorable decree of nature that the period of decay and constitution failure must end in death; the body to which the constitu-

tion is attached must perish. Whether or not there is a process of regeneration after death, whether or not the old constitution, animated by the same soul, renews itself in another physical body, are questions that are at present beyond the ken of man; all that man is permitted to know is that upon the complete failure of his constitution to perform its functions his body must perish.

Transferring our point of view to the social body, or the body politic, we are able to perceive processes in the life of societies which are analogous to those we have just noted in the life of individuals. It happens with the body politic that it becomes at times sadly hampered by its constitution; the instrument which met all the wants of the members of the social body in periods of childhood, youth and middle age, no longer meets the demands made upon it; it fails to perform its functions properly; no longer has sufficient vital power to enable it to respond readily to the demands made upon it by the general social will; becomes incompetent to give expression to the wants and aspirations of the body it inhabits; and when the members of the social body desire to perform acts which they believe will contribute to their happiness and peace of mind, as well as the general welfare, they find that they cannot do these things because their constitution says "nay." At such times we have periods of disorder and contempt for, or defiance of, law; because the law, being constructed with reference to its harmony with constitutional sanction, and the constitution being a thing which has become devitalized and incompetent to properly perform its functions, no longer permits the members of the social body to do those things which will contribute to their happiness and peace of mind; they are hampered by the body of constitutional law, which weighs them down as with a nightmare, and they cannot meet their social wants and aspirations without becoming lawbreakers and placing

themselves in opposition to the established order of things.

When these periods arrive, we always find a drove of reactionary croakers—priests, judges, lawyers, privilege mongers of all kinds and their paid lackeys and apologists, who are unable to understand any question apart from its connection with the established order of things—who develop great respect for the law as it exists, and who exhibit great concern lest the decrepit instrument which is supposed to vitalize the social body may chance to die. As is the case with the individual body, these periods of constitution failure in the social body have invariably ended in death, and the death has hitherto always been a violent one. The disputes generated by the attempt to hold the members of the social body to the observance of worn out and decrepit constitutional sanctions have always been decided by the arbitrament of arms, with the result that the old constitutional sanctions have been swept away and new ones have taken their place. In theory, these violent processes are not required by the necessities of the case, and in fact they ought not to occur; nevertheless, it is a fact that no social body has hitherto been able to throw off a constitution which it has outgrown, for the purpose of assuming a new one, except by a violent process. The crust of custom becomes so thick that it must be struck hard in order to break it. The conservatism of privilege that has old constitutional sanction for its support becomes so marked that it can only be shaken out of itself by destructive measures.

Let it be understood that this is true only with reference to social movements, only with reference to those movements that have changed the social relations of men. Constitutions have been changed or amended so as to accommodate them to a political fact, on numerous occasions, without turmoil and without bloodshed, but such has never yet been the case when constitutions have been changed so as to accommodate them to a social fact.

It may be well, here, to indicate the difference between a social movement and a political one. A social movement has for its object a change in the social relations of the people. A political movement has for its object a change in the existing form of government without reference to the social relations of the people. Political movements are frequently carried through without bloodshed and war, but social movements never have been. For instance, the recent revolution in Hawaii was a political movement, it changed the form of government but it did not change the social relations of the people. Our own civil war was a social movement; it did not change our

form of government in the slightest: we went into that war as a republic and we came out as a republic, but the war established a new social status for four millions of our people, it changed the social relations existing between the black man and the white. A political movement may be carried through without any reference to a social movement; thus, in a monarchy where slavery exists, the form of government may be changed to that of a republic without in any way disturbing the institution of slavery, or a republic where slavery exists may be changed to a monarchy without disturbing the institution of slavery. Likewise, a social movement, one of which completely changes the social relations of the people, may be carried through without producing any change in the existing form of government. But it happens that political and social movements sometimes become blended and are carried on together, and when that occurs we have times "that try men's souls." Yet, there can be no doubt that where these double movements are concerned, the purely political issue involved might be settled peaceably and quietly, if it could only be divorced from its relation with the social issue and considered by itself.

The French revolution was both a political and a social movement, but there can exist no doubt as to what brought on the reign of terror. The political constitution of the French government might have been changed after no greater event than a war of words, and, in fact, there was good prospect that it would be so changed, we may, indeed, say that it actually was so changed, but the social relations of the French people could not be changed by any such method as that; the only death in store for the old social regime was a violent one. The social movement brought on the revolution, and it carried the political movement along with it, thus changing the political constitution of the government and the social relations of the people at the same time. A social movement may take on the character of a political movement when the political constitution is such as to interfere with the introduction of reforms that effect the social relations of the people. This was the case with France upon the convocation of the states general in 1789; it was the case with us, here in the United States, in the period preceding our civil war, and it is to a certain extent in the case with us at the present time. It is of the highest importance that the people of this nation, not the workmen merely, but every citizen, of whatever degree, who is interested in the future welfare of the country and its people, should understand the character of the great industrial and economic agitation that is now being

carried on. It is a great social movement; it is a movement that is destined to change the existing social relations of this entire people; it is a movement that will surely end in the total abolition of wage slavery and bring about a complete change in the property relation as it now exists; it must be understood and treated as such, and it remains to be seen whether or not we shall be able to settle a great social question any more satisfactorily than such questions have been settled in the past. In theory, we have one signal advantage over those who have been called upon to settle these great social questions in former days, which advantage ought to enable us to escape in a measure from the dreadful concomitant of fundamental social changes. We have the ballot, and the constitutional right to so use it as to change our entire scheme of fundamental law so as to make it conform with our social needs and aspirations. But, as a matter of fact, it is extremely doubtful if this is so much of an advantage as it is supposed to be. The advantage, if such it may be called, did not serve to enable us to escape from a great war which was based upon the necessity for social change; our fundamental law could only be changed so as to make it conform with a social fact by a resort to arms, but perhaps we were not then as socially self-conscious as we are now, or as we may become in the near future. And the very fact that the people have the suffrage, the fact that they have the power to change the constitution by constitutional methods, is, in a certain sense, a stumbling block in the way of progress. There is an assumption that because the fact exists the people are responsible for their own miseries. It is continually dinned into the ears of the people that they have the power to bring about any sort of a condition that they want, and why don't they do it? They are pointed to the constitution, the palladium of their liberties, and told to go ahead and bring about the reforms they wish for in a constitutional manner; everything is said to be in their own hands. It is here that the croakers and privilege mongers get in their fine work. They say to the masses, blindly pressing for social change, "we know that your demands are just; we know that you are being pressed to earth under the weight of wrongs which should be rectified; we sympathize with you and earnestly desire to see you enjoying every one of the rights which you demand for yourselves; but the remedy lies in your own hands, and you must proceed in a strictly lawful and constitutional manner." "Social order," say they, "requires that the law as it actually exists must not be violated; when law is no longer respected anarchy rules, and the very foundation of the social structure is in

danger of destruction. If the law does not represent your will you have a legitimate and constitutional method at hand for changing it; proceed along that line, the only safe one, and we are with you, all honest men will applaud your efforts and you will ultimately succeed.

"This reasoning is plausible, it is strictly in line with the theory of our social compact, and there can be no doubt but the greater number of those persons who indulge in it are honest and sincere in the belief that they have only the good of the whole social body at heart. Nevertheless, although plausible and reasonable, the difficulties in the way of this strictly legitimate method of improvement seem almost insurmountable, for the reason that the constitution itself stands as a buttress to the very evils that are sought to be repressed by law, and the moment a radical and effective law is directed squarely at a crying social evil it comes in violent contact with the sanctions of that instrument and falls lifeless to the ground. Very well, then, the same power that created the constitution can amend or abolish it, can create another which shall be in harmony with the progressive ideas of the age in which we live. This is true, but the moment it is attempted all the forces of the old social order, struggling to maintain its privileges intact, are roused into antagonism; all that petrified conservatism, that horror of change which always distinguishes those who profit by the existence of things as they are, straightway brings all the immense force at its command into the line of resistance; and that will be wise counsel, indeed, which shall avail to prevent, in such a time, the very conflict sought to be avoided by such a method of procedure. And, again, those old constitution builders of ours were so much in love with their work they thought the instrument which was the product of their efforts so near a perfect one for the government of man that they desired it to stand for all time to come, and they hedged it about with such safeguards as to make it next to an utter impossibility for the people to change it so as to bring it into harmony with the social aspirations of a twentieth century commonwealth. To illustrate the immense difficulties in the way: When the Coxeyites were demanding the issue of treasury notes and the inauguration on a national scale of public works, for the purpose of employing the millions of idle and starving men who had been deprived of their means of subsistence and rendered helpless by the industrial crisis, a demand which was in harmony with the wishes of a vast majority of the laboring men of this country, it was treated as a complete and self-evident absurdity. It was declared that our law-making body would be entirely

transcending its constitutional authority by the inauguration of any such scheme as that, and there can be no doubt that had the altogether unlikely came to pass, by congress acceding to the demand, the matter would have been promptly appealed to the court, which would have responded by declaring the act unconstitutional. Then, look at the almost hopeless process that must be gone through in order to remedy that constitutional defect. It is appalling when one thinks of the matter seriously. During the course of his address before the American Bar Association, at its annual meeting in Saratoga, on August 22, Judge Cooley, president of the association, and probably the highest authority on constitutional law in the country, remarked on the Coxey movement as follows:

The thought actuating the movement was that the country of their birth, or which they had selected to live in, owed them the duty to see that the means of support were provided them, and that the government must perform this duty. No attention seems to have been taken by them of the apportionment of powers between the states and the general government; the states were passed unnoticed, though to one familiar with our institutions it was plain enough that the duty insisted upon, if it existed at all, must rest upon the states, and the armies marched directly upon the national capital to demand the action of the general government.

These vagrant bands marched across the country to the great detriment of its industrial life. While they pretended to represent the doctrine that the government was under obligation to provide for its people, the means whereby a comfortable living might be had, they found sympathizers among those temporarily out of employment and also among other well-meaning people who had of the true functions of government only vague and unsettled notions. They caused unrest everywhere, and as they represented notions which are antagonistic to the existing social and political state, they were everywhere a public danger.

It is here plainly set forth that legislation of the character demanded had no constitutional sanction, the general government was utterly powerless to afford the desired relief; and the closing sentence of this quotation is pregnant with food for earnest thought. "They caused unrest everywhere, and as they represented notions which are antagonistic to the existing social and political state, they were everywhere a public danger." The idea expressed in that sentence pretty accurately represents the ability of the upholders of the existing order of things to comprehend the significance of the great social movement that is going on about them, and it also furnishes a very fair indication of the immensity of the difficulties which stand in the way of bringing about desired constitutional changes. There is no intimation here that there is any "public danger" to be apprehended from the fact of millions of idle men, divorced from their means of subsistence through a legitimate operation of the existing social state, tramping about the country without a place to lay their heads, and without a crust between them and starvation in a land over-

flowing with all the good things of life. It is only when these men band together and get "notions" in their heads that there is any "public danger" to be apprehended.

And what were those "notions" which are "antagonistic to the existing social and political state?" Simply that millions of idle citizens should not be left to starve in the midst of plenty, and that there should be provided some means whereby they might turn their labor into bread with which to feed themselves and their wives and starving little ones. The existing social regime had cast them off, had decreed that they were superfluous, but they had a notion that they had a right to protect themselves from starvation, and they asked merely for the chance to labor for bread. President Cleveland had told them that their condition was the result of vicious legislation on the part of the national lawmakers; what more natural, then, than that they should turn to those lawmakers for relief? What more natural than the belief that the body which had produced chaos in the industrial world might also be able to produce order? And, as they were workmen, what more natural than that the relief sought should take the form of a demand to be provided with work? All they asked for was work, a chance to earn a living; surely there was nothing incongruous in the idea that the body which they had been taught to believe exercised absolute control over the industrial destiny of this great nation, this country of almost limitless resources, might at least give them this.

But such "notions," it seems, are antagonistic to the existing social and political state," and their organized expression, therefore, constitutes a "public danger." And these "notions" are also unconstitutional, that is to say, there exists no constitutional method whereby they may be carried into effect. Then considering that the mere organized expression of such "notions" constitutes a "public danger," how much greater must that danger appear when the attempt is made to alter that constitution so as to permit the mere "notions" to assume the character of actualities? It would be more than well if laboring men could be brought to devote some attention to this phase of the industrial situation, to the end that they might thus form some sort of an idea of the magnitude of the task that lies before them, and thus still the warring factions within their ranks and permit them to use their constitutional weapons for all they are worth. Understand, there is no claim here that there is anything impracticable about the "notions" under consideration, it is nowhere asserted that there is any insurmountable obstacle in the way of their realization. And, from a commonsense

standpoint, one might be excused for believing that these millions of idle men might better, and with far more safety to the whole country, be employed in some productive labor and thus become self-supporting, even though that labor was carried on under public auspices, than to be left helpless and starving to float at the mercy of the wind and tide upon the vast sea of industrial stagnation. It is only asserted that they are out of harmony with constitutional sanction and that, therefore, they are "antagonistic to the existing social and political state," and their organized expression constitutes a "public danger." Oh! that men would only learn to starve quietly and in a constitutional manner, like good citizens as they ought. We should, indeed, be near unto elysium then. But we shall go on in this way, ever widening the circle of authoritative condemnation of those "notions" which are "antagonistic to the existing social and political state," ever bringing the force of constitutional prohibition against them, until, by some process or other, the "notions" themselves become legitimized. The holders of these "notions" will, in the meantime, be called upon to suffer contumely, ostracism, persecution and perhaps death; yet they must not falter, yet may they take heart and have courage, for were not Garrison, Phillips and Lovejoy afflicted with these "notions," and are their names not spoken with reverence by this generation? Are the acts of those who opposed themselves to the then "existing social and political state" not written down on the pages of history in the most flattering terms of approval? Returning to Judge Cooley, it appears that in spite of his reverence for that venerable instrument there still exists a doubt in his mind concerning the infallibility of the constitution. He is inclined to think that the work of our old constitution builders may contain imperfections after all; may be in need of review and revision. The address from which I have already quoted contains the following:

The year which has elapsed since the last meeting is, in some very striking particulars, one of the most notable in the history of the country, and, I think, cannot more usefully occupy your time than by inviting your consideration of some of the phases of social and public life which, in a constitutional point of view, appear to merit notice. They have a bearing upon the vital principles of our political institutions, and seem to indicate a necessity for reviewing the work of those whom we have been accustomed to admire and respect as the founders of liberty in the western world, and for considering and judging for ourselves whether the structure they created, and which has hitherto been the admiration of the world, is worthy of the praise it has received.

The experience of the year has taught us, if we needed the lesson, that times may and will come when the fact that for a century political institutions have had beneficent operation and the excellence of their principles has seemed unquestionable to those who have enjoyed them, may perhaps no longer be

accepted as conclusive evidence of their consistency with true liberty or with the highest good of a great people. The careless or interested criticism of one whose political following seems to be discontented with whatever of government now exists, may suffice to put our constitutional structure under suspicion and the outcry of persons who not unlikely are so new to our country that they speak but imperfectly its language and cannot read a clause of its constitution, may be enough to raise in the mind of one who courts their favor, doubts, real or pretended, whether the freedom we are supposed to enjoy is more than nominal.

When such a time comes the most fundamental principles may be in need, not merely of tacit acceptance, but of a defense that shall consist in active and aggressive warfare upon those who in disorderly or unconstitutional ways, assail them.

The thought expressed here is one that is present in the minds of all those who are affiliated with a class in this republic which sees its profit in the continuance of the existing order of things; it is a thought which finds open expression from pulpit and rostrum with increasing frequency of late, many of those who give expression to it honestly believing that they are working for the preservation of law and order, and in the interests of liberty, when the truth is they are working merely for the preservation of privilege and the continuance of robbery. The constitution which gave the members of the plutocratic class the liberty to plunder their fellow men in accordance with the forms of law has served its purpose to their complete satisfaction, and they are now ready to pitch it overboard in order to adopt another which shall give them all the power they need to thoroughly conserve their existing rights and privileges. Let no one suppose that this talk of change is calculated to interfere in any way with the existing social relations; indeed, Judge Cooley's condemnation of those "notions" precludes the possibility of entertaining such a supposition. The change in view is merely one which is calculated to restrict the power of the ballot to assail the existing order of things; it is one that has for its object the limitation of the right of suffrage to those only who are known to be in favor of things as they are. There is a suspicion that the producing element of the nation is becoming united, that workingmen are becoming class-conscious, and there is a fear that the great political power which the masses are capable of wielding may possibly become so solidified that it will successfully be used so as to break down the wall of privilege and possibly change the constitution so as to accommodate it to the great social idea that is at the bottom of the present agitation. This fear will furnish a motive for the manipulation of public sentiment so as to create prescribed classes, and the prescriptions will be sought to be extended from time to time as fast as the necessities of the case may seem to require it, until the privilege mongers feel themselves se-

cure in the possession of their booty, and the last semblance of manhood is crushed out of their serfs—the workmen. And the presence of this fear is the day star of hope for the producing masses if they will but understand and appreciate the situation as it exists. It points out the way for them to go in search of the only method left to them for their peaceable enfranchisement. Fellow workmen! close up the ranks, and let it not be set down, when the history of the approaching crisis shall be written, that you failed to make proper use of your constitutional prerogatives or neglected your duty to your fellow men and to humanity at large.

### IN UPID'S NET.

BY FRANK A. MYERS.

They met first while she was visiting her uncle at Banquo, and thence for a month their meetings were frequent.

She was a beautiful, modest, lovely girl, and possessed of refined taste and penetrating intelligence.

He was a high-toned, smart, jolly young man; neat in dress, but just a little short in his fund of real sympathy for others. He had an abundance of it for himself, and may have been just a shade egotistical—at least I always thought so. There were others who said he was as unselfish as sunshine. It is certain he had a great many friends, even if he was a trifle independent sometimes. What was always a great source of pleasure to him was the bountiful way in which nature had bestowed good looks upon his physiognomy. Everybody said he was a fine looking man. Added to this was his talkative, sociable disposition. In brief, he was popular and a ladie's man.

"As this is your last evening with us before returning home, let's attend meeting to-night—what do you say?" said this handsome young man, whose name was Tobin Wing, addressing Wellie Mac.

"All right," said Wellie, gleefully, her bright eyes gleaming like jets.

There were "no intentions" in this case on the part of either, it needs to be said here, and still they found a peculiar pleasure in being together. The truth is, neither knew the workings of their own hearts, and apparently cared not to know.

"I believe this is the last night of the protracted meeting," said Tobin, as he pushed his chair back a little from the glowing grate.

"Yes," responded Wellie, with a light, easy laugh, as she turned to Tobin. He was staring stolidly into the red embers of the coal fire, and did not return her twinkling, merry look. Running his fingers through his short hair a few times in a sort

of self-abandoned manner, he observed in a most unstudied, casual style, as if it had just occurred to him:

"When you get home I hope you will not object to receiving a letter from me."

A slight blush suffused her fair round cheeks at this half inquiry, and her eyes of penetrating mould assumed a tender glow, and her words and acts belied her feelings as she replied naively:

"You are cruel to want to inflict poor me with your heavy and gaudily written letters, but—"

"O, none of that, now," he interrupted. "If you don't wish them—"

"Hear me through," she cried, with a falsetto sternness meant for the comic, "and prejudge not rashly."

"Well," he interjected indifferently, if not a little independently.

"I meant to tell you how gladly your proposition struck me, and how—how—pleased I was that you made it."

Was she thankfully and gratefully accepting the proposal, or was she pretending a little? He could not tell. Or perhaps she was retracting or explaining away her seeming stiffness and inouciance at first.

"You never jest?" he inquired in a tone that caused her to feel small in her own eyes.

"Well, hardly ever!" was her jocose and airy response, after the prevailing fashion then to quote Pinafore.

"I never know when you mean anything in earnest," he remarked soberly and slowly, intending to test her real solemnity and seriousness. Yes, oh, yes; he liked the girl, but there was something so doubtful about her style, and he couldn't tell just what her mind was two minutes in succession. He guessed she, herself, knew herself. If she didn't, she ought to, and it was not his business to set to work to study her and reveal her unexplored self to herself. And yet he caught himself doing just this thing.

"I am not a flirt," she said, tartly as she could, as if resenting an affront implied in his remark, at the same time trying to preserve a smiling face. She was, in fact, not provoked one bit. His solemn air was manufactured for the occasion, and he enjoyed getting her into straits and letting her disentangle them alone. If he had paused an instant to analyze his own sense of the matter, he would have found that he rather enjoyed teasing her, and still he could have discovered no reason for it. The singular state of feelings he had in her presence this evening did not amount to an emotion, nor did he care what they were. All in all his indifference was not indifference.

"I did not say you was," he responded sharply.

"You left that inference," turning the tables on him.

"I will not dispute that," with calculating frankness that made him marvel at his own intellectual coolness.

"You cannot," she retorted, with feigned defiance.

"I will not."

"You dare not."

"What would you do if I did?"

"Eat you alive," bursting into rippling laughter at the ludicrousness of her own thought.

"Gracious!" he exclaimed farcically, lifting his large eyes to hers with kindling light.

"It's true," with mock gravity.

"I don't doubt it."

"You would better not."

"Pshaw! now, you're no lion."

"No, but I'm a girl, and that's more."

"I don't believe it."

"You're skeptical."

"Upon that point—yes."

"And destitute of sincerity."

"I deny the soft impeachment."

"Denial does not divest you of guilt," she returned.

"Still I deny."

"Anybody can do that. Defense is harder."

"And will always deny."

"Generally the weaker the cause the stouter the denial," glancing up archly at him.

"But the letter," he said abruptly, in a tantalizing tone.

"I have seen no letter," she said twittingly.

"Do you want to, really?"

"Was ever woman born that did not rejoice and cry over a letter from a fine young man? I shall watch every mail that arrives till I get this letter from you. Now, mark me—I am in downright earnest."

He saw a twinkle in her eye, and said to himself that she was laughing at him.

"You shall have the letter. Of course I want to write to you, or I would not have broached the subject." After he had said this it sounded like an apology, and he half-despised himself at the moment for the retrenching utterance.

"You are an honest-hearted gentleman, I confess, and I always thought so." That sounded like she was twitting him, and he pricked up his ears.

"I always was," he interjected, scarcely knowing how to answer her.

"I hope you always will be," she returned, trying to impress him with both a serio comic and melodramatic air at the same time.

"Same to you," he rejoined, affecting to utter slang.

"Humph!" she ejaculated with a manu-

factured tone and air of disgust, curling her rosy lips and half closing her darting eyes, at the same time springing up from her seat and approaching the lamp on the center table. Then she resumed: "And dare you question my honest intents?"

"I dare do what man dare do. He that dares do more is not a man," said Tobin quizzically, quoting a sentiment from Shakespeare.

"And I would spit on thee—if it were fashionable these days," observed Wellie, assuming the air of Queen Ann, as she conceived, and concluding with a bursting laugh that would admit of no interpretation.

"I believe you," he answered so sagely that she felt she had made a very grave mistake.

"And has it come to this?" she queried half-mechanically and with the attitude and spirit of a soliloquist.

"Aye, to this," he uttered sternly.

"Man, have you no mercy?"

"Mercy is to those who mercy show."

"Take pity then."

"Pity! That argues me as your superior."

"And, if it does?"

"Conference to be full and gratifying must be between equals. And I take it you do not wish to confess to inferiority."

"To confess that, is not to confess to dishonesty," said she as a tear of vexation stole down over her dimpled and lovely cheek. She took her kerchief gently from the folds of her trim-fitting dress and with a pretense of touching only the tip of her nose softly mopped up the dewdrop of surprised emotion, which Tobin had not seen. She was not angry, but she was "all torn up" and could not tell what was the matter. But her serious air could not now be concealed, and he half felt like accusing himself of untoward harshness.

"The latter question settled," remarked Tobin quietly and with a view to amending affairs, "and the time for church being at hand, let us bury the red-edged tomahawk and repair to our devotions at the church."

Springing up like one who never knew a tear in all her life she said bubblingly:

"It is so ordered, Mr. Secretary. Soon we can sing the song of our childhood—

High and low, fast and slow,  
Over the hills away we go."

And she flitted about lively for a moment, seeking her hat and wrap. These on, she put her tippet about her neck and with a frolicking air caught up her black muffas as if it were about to escape out of pure willfulness. Then she added in lively strain, the room echoing the gentle note of her musical voice:

"Now I'm ready, sir. And, pray, don't you say that I delayed you." All this had

such a lively, pleasant humor in it—no false note in a single sound.

He took his hat and great-coat from her soft hands, and as he quietly got into his coat he said:

"As long as we are before time we are not behind."

"But better late than never, Hal," she replied in the style of one who inwardly said, "Now, there, take that."

"Proverbial still," he responded enigmatically.

"What—how?"

"Depend on't, woman will have the last word."

"And man will browbeat her out of all feeling of intelligent respect, and congratulate himself on his smartness in doing so," she retorted with equal fitness and shrewdness. She was not sure that she approved of this censorious counterstroke, after it fell upon her own disapproving ears, and she found herself wondering what he thought of it. She did not like to put herself into mental states that wondered what others thought of her; she preferred to be selfish and approve her own conduct and words.

"And woman feels it her bounden duty to tell him every thought her feelings suggest, leaving no room for the play of the imagination."

And now she wondered whether he was capable of wondering what others thought of him.

"That last-word business, as you persist in demonstrating, is more a masculine theory than a natural fact," she said slyly.

"I don't think so."

"No, men do not think so, I know. If woman tamely submits to his imperial highness and says nothing, but obeys his every beck and nod, she is a model woman, indeed; a veritable Griselda. I'm glad we are not all that way."

"And I'm sorry," he responded farcically and with designing purpose.

"Let us agree to disagree here. I do not care to discuss this point further now, since the truth cannot shake either from his firm convictions." This remark placed her in the ascendancy.

"Convince a man against his will, and so forth," he subjoined, as if to agree with her. "You let him have his opinion still, &c," she amended as a sort of mocking conclusion, but without any intent at raillery.

"Too bad," he commented satirically.

"I'm glad you confess to the truth—once in your sweet life, at least."

"At least," in astonishment.

"Yes," in a merry, laughing tone.

"Great Caesar! what a beast you paint mortal man!" feigning to believe her in solid earnest.

"I have not overdrawn the picture."

"And yet lovely woman could not do without the beast."

"I've nothing to say on that point."

"How strange! How very strange."

"And is it so strange, indeed," she said airily and connecting the conversation now with that of a moment before.

"Most passing strange! A woman with nothing to say! I am dumb!" He affected to laugh.

"Then let me take you back home; we want no dumb beasts at church."

His hearty laugh at this witty sally acknowledged his defeat, and he was glad a truce was at last declared between them.

They were now at the church door, and the opening song broke through the barriers of walls and swept away on the cold night air into the limitless beyond. It went forth as a sweet incense unto the Lord from the profane altar of man's wayward heart, and just in the degree that it became earnest and acceptable unto Him did it raise up the down-trodden and heavy-laden to a purer and higher sphere of righteousness and perfection.

It cannot be said that either Wellie or Tobin enjoyed in any sense the church services. Their minds—perhaps their hearts also—were preoccupied with the lively conversation they had had.

The next day a jolly crowd of Wellie's friends congregated at the depot to see her off home and bid her goodbye. The snow was falling fast, and the irrepressible young gabblers collected around the stove in the depot waiting room, where they were seemingly each trying to outtalk the other and where no one listened to anything that was said. All were standing irregularly around the cannon-stove, twittering and chirping like young birds in their nests when the mother bird brings them something to eat. The screaming laughter and the explosive bursts of gayety resounded in the room like the confusion of a madhouse and bewildered the silent spectators. But it was pleasant to behold the buoyancy of lightsome youth and witness its manifestations of absolute freedom from soul-hardening care.

Wellie Mace was the liveliest of the lively. Happy in the fact that she had turned her face homeward, she surrendered to the impulses of the occasion. And then, perhaps, she was endeavoring to make an impression on Tobin Wing, who was present to bid her godspeed on her journey. The enlivening spirit of the occasion was a gay scene of youthful frivolity never to be forgotten. Like the winds that roar these young folks gushed and tossed back and forth thoughtless words, and no one could divine why or what gave rise to the swift current of foamy ideas.

But through it all Wellie and Tobin

seemingly strove to say as little to each other as might accord with those who took no interest in one another. And neither knew whether they would ever meet again or not, and apparently cared not whether the currents of their lives should ever again run together in the same channel. They had no secret understanding. Neither could account for his or her indifference. It was not desirable, it is quite safe to say. They were and they were not acting for the special concern of the other. One thing was very sure, they parted most excellent friends.

Like a bit of noise from the inferno, the train rolled and hissed into the depot, puffing like a bridled hurricane. Securely bundled up, Wellie was helped into the coach by Tobin. Just before she entered the car door she turned and waved her hand in silent goodbye to all the crowd of booming, beaming friends on the platform. Notwithstanding she had kissed all the girls a mute goodbye, she impulsively turned and gayly fluttered her hand back as if it were a silent speech from her overflowing soul. Her wrap flitted in the swift air like a banner from some mast, her cheeks were red as spring roses, and with uplifted hand she stood there a perfect picture of youthful beauty and innocence. A chorus of melodious female voices greeted her lively, fun-loving ears:

"Goodbye, Wellie."

She disappeared in the coach. Tobin found her a seat, and she thanked him, smiling graciously.

"Don't forget the letter," she cried just as the car jerked in its start.

Tobin had but time to say—

"No."

And he hastened out of the moving car.

Wellie had gone to her home more than a hundred miles away.

And again Tobin took up his monotonous duties as an aid clerk at the depot. When he thought about it, he confessed that his acquaintance with this dashing, spirited, well-mannered girl had been to his life like the crocuses to the early spring—a joy and an adornment.

## CHAPTER II.

Tobin, during his first leisure hours, wrote a pleasant, chaffy, chattering, non-serious letter to Wellie. He did it, it is essential to say, honored reader, almost as a perfunctory duty in the fulfillment of a request he half wished he had not made.

Upon his table in his room was scattered much writing material and many old letters. When he had finished the hastily-thought-out letter he sat in pensiveness, gazing blankly at the unfolded sheet. It is hard to determine now whether he felt any

satisfaction at all in his performance. He did not believe he did.

In a hollow-spirited listless manner he at length read it over from beginning to end, and when he had finished he tossed it down petulantly like one disgusted with the fading, fleeting vanities of life. He was half inclined not to send it, even after the labor of writing the four pages full. He had lost, he thought, all interest in the incipient correspondence. But like many others he did not know himself—knew not what caused his dry, dull, dusty feelings. A dearth had struck his enthusiasm, like the drying heats of summer.

Then he arose from the littered table and went out.

Two days afterward he visited his room again, and there lay the unsigned letter to Wellie. In a half-jesting humor he scrawled his loved name to the uninspired document, and folding it up, shoved it hurriedly into a large, plain, white envelope. Fearing to read it again, lest he should not send it at all, he hurried it off to the postoffice. He felt a little meanly at the way in which he had executed a matter that he himself had requested, but then he recalled the fact that he proffered the request when under the spell of her glorious humor. After all there was something rich and vague and desirable about this girl.

The letter bore the trite and tentative intelligence that her visit to Banquo had been a delight to him, and that he hoped she would renew her acquaintances—he wrote it in the plural number—there sometime in the near future. With a gracious contortion of the pen he feared, however, she would never repeat her visit, especially if what he had heard of her was true, and that was that she was soon going to marry a young gentleman, a telegraph operator, in her own town of Dennis. He hoped she would at least notify him of her wedding in time to send his special congratulations. And very much more of the same trifling sort. To himself he said it made the goose marks show on his flesh to write such deadly nonsense. A week later, he could not have told, for the life of him, what foolishness he had written. But, if the truth must out, he did not particularly care what he wrote.

A reply to this strange billet-doux came promptly. Wellie denied very sentimentally and with uplifted hands the "charge" that she was going to marry soon. She wrote with joyful emphasis that she had long since made up her mind "to live and die an old maid, regardless," declared that life would be sweeter without a "beast" than with one, and asserted that she did not propose to put herself in a position where she would be compelled to

"have the last word."

"So far as marrying is concerned," she wrote easily and gracefully, "no young gentleman has had the temerity to ask me for my hand and heart, and what is more, I hope none ever will, so I will be spared the vexing pains of flatly rejecting him. Now, I'm disposed to think you will declare this all to be only sour grapes, but I beg to assure you that I am perfectly sane while penning this language.

"It is perhaps no news to you to be informed that Claude Fenshaw spent an hour with me at home last Sunday evening. But what I desire to say in this connection is that he saw the photograph of your sister Lillie, and falling in love with the picture, requested me to ask her through you to correspond with him."

Now, this had a tone of frankness about it, but still that very open tone might be deceptive. Tobin reflected that they might have agreed to this as a stratagem to deceive him. At all events he suspected that Claude admired Wellie's photograph more than he did Lillie's. However, he wrote back to Wellie, without consulting Lillie in the matter, that she would answer Claude's letters. He had no other ideas but that Lillie would gladly avail herself of the opportunity to carry on this correspondence for pleasure and profit both.

In a short time afterward Lillie received a letter from Claude, written not only in elegant penmanship, but in refined language. And what do you suppose Lillie did? With a sudden singular perversity of spirit she peremptorily refused to answer it. Now, we are sure, from a certain angle of view, you will agree that her reasons for the refusal were good. She said, first, that she ought to have been consulted in this arrangement in which she was so prominently concerned; and, next, she would not correspond with an entire stranger, who in time, if he was not already, might turn out to be a villain; and then how would she feel with the remembrance of this correspondence clinging to her like an incubus! Despite all his spacious and varied arguments to the contrary she still maintained her resolute decision.

With Claude's first letter in hand Tobin was placed in a dilemma, such as he had not in the least suspected. Should Claude find out that Lillie would not correspond with him, he would never believe otherwise than that Tobin had conspired to have her insult him by this refusal, or else that he was a fool and unworthy of a reply. Whatever Claude might twist out of the entanglement he could not escape the conclusion that Tobin had willfully misrepresented the fact when he wrote Wellie that his sister would answer the letters. And perhaps Wellie, too, would feel hurt over

it, since she had asked the favor for Claude. It was equivalent to impeaching her honesty in the matter, and making it appear that she had recommended an unworthy correspondent for Tobin's sister. And so unexpectedly a real crisis had come that Tobin was truly nonplussed. What aggravated the matter not a little was Lillie's utter indifference about it.

After cudgeling his brains for two or three days trying to solve the difficulty, he finally asked Lillie for Claude's letter, and she gave it to him.

Then he went to his room, sat down at his table or desk, and wrote to Claude in Lillie's name. What could he do but express delight at the receipt of the pleasant letter, and hope their correspondence would prove profitable from a literary standpoint, as she could entertain no other motives whatever in writing.

After this missive was finished he explained all about it to Lillie, read over his answer to Claude, and said this was the only way he knew out of the perplexing strait.

Like a sudden playful breeze it now struck Lillie as a huge joke, and she laughed heartily over it. Of course she did not object to his writing to Claude in her name as long as he read to her the letters he wrote. The letters from Claude she was sure to see. She became profoundly interested.

Claude responded promptly to this, and she perused the love document—with the love part all left out—with infinite satisfaction.

"I have one girl," he wrote, half rebukingly, in answer to her statement that she entertained no motives but those of literary culture, "and that is quite enough for me, and hence I write simply for pastime and profit."

The concluding facts of this true tale do not justify this statement, as we shall see by-and-by.

When he asked whether Tobin was writing to Wellie, it was very natural for Lillie and Tobin both to suspect the real motive of the query, if not the reason in the first place for the correspondence. He added that Wellie denied writing to Tobin, but as for himself he believed they were corresponding regularly. To the brother and sister this singular affair became absorbingly romantic, and added a new spice to their fresh young lives.

"Now look here, Lil," remarked Tobin, when he had finished reading Claude's letter, "we must not answer that point about whether I am corresponding with Wellie, and we must strive somehow to gain his full confidence and extract a confession of the whole business from him. See?"

"Just so—all right! But you know that I have nothing to do with this thing."

laughed Lillie. "I'm not sure of the rightness—"

"Well, that is the idea, anyway," interrupting her and holding one eye shut with a comic leer.

Then he drew a letter from his inside coat pocket, and read it to Lillie. It was from Wellie. And she wanted to know whether Claude was writing to Lillie. Wellie wrote that he denied it, but she did not believe him—that his mysterious air about it contradicted his denial. The most of the letter was filled with scribbles about Claude, and silently conveyed the impression that she thought a good deal of Claude Fenshaw. Tobin knew not what object she had in trying to convey that impression. Perhaps she did think very much of Claude, and perhaps she was only endeavoring to make Tobin think so. Her letter was adroitly drawn, and left Tobin in a very unsettled state of mind about her. And yet he said to himself that he did not care a pinch of snuff, one way or the other, about it.

Three or four letters were written to Claude, ostensibly by Lillie, and the pretty jest grew to fine proportions. The perpetrators of the joke had many a hearty laugh over it. It was rich. But never once was answered the point whether Tobin was corresponding with Wellie. And yet in every return letter Claude repeated the same question. Evidently he was deeply interested in that one single fact; it was no passing idle fancy with him.

At length he wrote that he believed she (Lillie) studiously avoided answering his question, and therefore he would construe her silence into an affirmative answer. This was his clouture, so as to speak, and he believes it will force her to a yea or nea on the point. But notwithstanding all this the letters to him were as silent as the midnight stars on a cold wintry night.

With equal persistence Wellie repeated her question as to whether Claude was corresponding with Lillie. Tobin took no cognizance of it whatever, and wrote not a breath concerning that point. At last she wrote, he thought, a little petulantly regarding it, and still her correspondent remained as speechless as a mummy.

It was a difficult task to gain Claude's confidence and induce him to write unreservedly about Wellie. This was now the great desideration with Tobin. His diffidence Tobin assumed to be a slight pointer, and one not altogether favorable.

In the strictest confidence Tobin represented to Claude that she (Lillie, the presumable writer) was betrothed to one of the finest young men of Banquo. He further wrote that as soon as this fine young man completed his college course they were going to marry, which would be in about a

year, "or such a matter." He made Lillie say they exchanged letters weekly; the receipt of this weekly missive, fledged with the pinious of eternal love, was the chief event of the week to her. As soon as he had finished his collegiate studies he would enter the legal profession.

Now, all this was manufactured for the occasion, of course, for the single and sole purpose of gaining Claude Fenshaw's implicit and unreserved confidence. It was a straw-man he set up—all a joke on Tobin's side only. As Tobin viewed it, a joke was a joke, whatever its character, and therefore could not be immoral.

And the "joke" won, after two or three more letters had passed. Claude opened up himself like a book printed in pica, and he wrote as one who had the complete confidence of his esteemed correspondent. Her (Tobin's) artless prattle about her intended (?) induced him to talk freely about Wellie. This was much to Tobin's delight. And Lillie also relished the joke, much as a hungry man does a strawberry shortcake. And yet the nature of Claude's confessions were not exactly agreeable to Tobin, for some inscrutable reason. He would rather the statements or information contained in Claude's letters was not true.

The letters bore the unwelcome news that he was engaged to Wellie; that his "pa" was the wealthiest man in Dennis. He hoped Wellie was not going to marry him for his money. Three times a week he called on her, the "nicest girl he ever knew." And somewhere along in each letter he persisted in asking the same old question, whether Tobin was writing to her.

The persistence of this inquiry finally caused Tobin to believe he wrote his confession expressly to have Lillie reveal it to Tobin, in order to discourage or overthrow his supposed rival. There was now a beautiful uncertainty about the whole affair on both sides. It grew more and more entangled. The more he tried to solve it the worse it became.

Lillie saw that the "joke" was growing richer and more desperate every day. It was leading Tobin on like a man who was lost in the canebrakes of a large swamp. The end—it never occurred to Tobin to think of that.

And once Claude wrote he saw every time he called on his sweetheart the elegant plush album Tobin had given her for a Christmas present when she was visiting in Banquo. He also stated that he saw the ring she wore with Tobin's initials, "T. W.," in it. However, he was frank enough to say that she denied receiving the ring from him. He asked Lillie to tell him definitely about this ring.

Tobin, as Lillie, he it always remembered, confessed the gift of the album, but as to

the ring she could not say.

Meanwhile the correspondence went on between Tobin and Wellie. And Tobin was extracting much "fun" out of his correspondence with these two persons. All that Claude wrote to Lillie, with his own trifling comments thereon, Tobin repeated to Wellie. To all this Wellie Mace made answer, not exactly as a defense of herself but as an explanation. She averred that they were *not* engaged, that he did not call on her three times a week; that he had not called on her over six times in his life, and that she did not care how rich his "pa" was—it made no difference to her.

Here was a pretty mess, indeed. The richness of the "joke" relieved his mind of the fraud of writing in his sister's name, if indeed it ever gave him the least concern. How easy he could end the whole matter by suddenly breaking off the correspondence and refusing to explain! The hard-hearted fellow had no concern what trouble he engendered between Wellie and Claude. Of one thing he was certain, and that was that he would never reveal the fact that he wrote Lillie's letters to Claude.

Strange as it may seem that Claude should be guilty of such boastful folly, it is nevertheless true that he wrote these words to Lillie now:

"It will not be good for Tobin to come to see Wellie here at her home, as I've heard he intends to do."

At first Tobin took this as a threat of violence to his person; perhaps Claude would act the part of a villian and assassin in this gentle by-play in life. But of course he could have had no such mad design. All he meant by this fustian expression, which sounded to Tobin as big as Aesop's inflated frog, was to the general effect that "matters" were so definitely arranged between them that Wellie would not entertain him if he came. In a jealous humor he wrote this bold foolishness as a bluff. He was shrewd enough to play a little jealous game. And further he hoped to encompass Wellie's flirtation with Tobin. In his own soul he was conscious that she cared little if any for him, and he feared she was becoming firmly attached to Tobin as the ivy to the masterful oak of the forest. He said to himself that if she learned to love Tobin it "was all day with him." So in all innocence he wrote the notorious boast recorded hereinbefore.

In one of Tobin's dashing letters to Wellie he spoke of her little sister Dola, and sent her his best good wishes. This brought a respectful letter from the kind mother and a polite invitation to spend a few days with them. As Dola was not old enough to write, the loving mother acted as her letter-writer.

Now, Tobin began to correct some of his

vagaries and conjectures about the relations of Claude and Wellie. The general tone of the evidence was to the effect that Claude had misstated some things. He concluded Claude was not an acceptable prospective son-in-law to any one in Wellie's home. So the bewilderment increased.

In a fit of garrulity and unconcern he wrote to Wellie that it was his honest opinion she was a flirt; however, he believed she was sincere and without any of the elements of a mean coquette.

"If you do not like my opinion of you," he wrote, "I may conclude I have been abusive where I meant to be kind. If you approve of openness and frankness, I am sure you will give me credit for possessing these admirable qualities. I do want to say, above all things at this time, that your letters have been bright, crisp, and interesting, and my correspondence with you has been profitable in the highest degree."

This was his last letter. The dual correspondence had grown wearisome.

In fact, in one of his last letters he begged she would talk about something else than Claude. And she had answered that she would try, but the trial was an utter failure.

When she so defiantly and vehemently denied what Claude had written to Lillie about her and himself, and positively declared she did not believe he wrote such stuff, Tobin bundled up Claude's letters to his sister and forwarded them by mail to Wellie's sister Maude, who read them and then turned them over to her sister. Tobin's single object in sending them to Maude was to have a witness, in case Wellie should burn them. In a doubting humor he said she might deny the receipt of them and then defy him to prove that Claude ever said such things.

There was a pause in these very unusual proceedings for a time, like the eloquent silence of a Quaker meeting, but at length Wellie wrote to Lillie that she expected to visit again in Banquo during the approaching holidays and would, therefore, accept the invitation to be her guest.

To Tobin this news conveyed a pleasing significance, in spite of his indifference so rigidly imposed on himself without any special reason or purpose. And yet her coming might—indeed must—involve a very unpalatable explanation of the mixed-up correspondence, and would, no doubt, occasion no very pleasant set of feelings between them. He judged, with impartial sense, that such strained relations might be brought about as would make her an awkward guest of Lillie's. Still he desired to see her, and run the hairbreadth risk of making her an inveterate enemy. So he must set his mother wits to work to avoid an impending social drama of no pleasant nature. And in time

he struck a plan that would avert the unpleasantness looming up in the near future like fearful breakers to old salts of the sea—at least he felt confident in the success of his scheme.

Accordingly, he induced Lillie to write that previous engagements would take him to Wingate at the time of her promised visit to Banquo, a circumstance that caused him profound regret, as it would deprive him of the exquisite pleasure of her lively presence. Of all those, he caused Lillie to write, whom he numbered among his chosen friends, none afforded him more pleasure to see and converse with than herself.

The hypocrite, if we must apply so vile a turn to one who would not purposely deceive in other things for all the world. But he rested supremely innocent on that old adage which falsely asserts that all things are fair in love and war. Things were so mixed up in all this business that he felt almost justified in saying anything.

As to Claude, he was now confident the fellow was deeper in the design to deceive for an ignoble, selfish purpose than he at first thought it possible. This was equivalent to saying that he had himself been deceived not a little. His writing to Claude in his sister Lillie's name was merely a playful trick, but one Claude would not approve of should he find it out. Of course Claude would get mad, conceive himself very badly injured, and all that, but—what of it? The kettle should not call the pot black, you know. There was no law of casuistry that would justify Claude's deception, or his anger either, for that matter, unless the boy's rule can be regarded in this case, and, that is, "you began it first." But no one will consent to have his own evils exposed; it hurts and enrages. If one falls into his own trap he is ready, on a moment's preparation, to swear most gallantly—hard as the army in Flanders. Laying bare another's cunning is a bold declaration that you have no good opinion of him, and we are not of those who believe that there are even some who are unconcerned when they are hated. Evidently Claude had designed to make a cat's-paw of Lillie for a clever selfish purpose. Should she ever discover his deception she must place him low down in the grade of manhood. And if Wellie should find him out he was certain she could find no justification in his course. In a sense Wellie had been the innocent means of opening up the way to all this love-light trickery. Further, what must Wellie think when she should discover that Lillie had refused to write to one she had recommended to her as a perfect gentleman? And when the whole truth should out, what kind of young gentleman, in fact, had she recommended? And again if Wellie should know all, what must she

think of Tobin? Whom must Tobin believe, Wellie or Claude? Their statements about each other crossed as positively as the beams of a church cross. Their conflicting statements might, if in very truth they did not, make her seem to be an untruthful girl, to say the least about it. But she knew nothing—the only innocent one of all. If she knew, it would be highly improper for her to visit Lillie.

This sweetly innocent girl had her reasons for wanting to go to Banquo once more. In Tobin's last letter she read between the lines a chilliness that struck her as the essence of a secret anger, and she hoped the visit would explain all differences away. Her sedate and considerate mother urged her not to spend a moment of breath over the assumed anger disclosed nowhere in the letter, but to make her intended visit as if nothing was suspected. But the breaking off the correspondence itself was an inexplicable matter. It is to be remarked here that those who seek pity usually obtain it. Wellie had wretched images; she wanted encouragement. Tears were even her portion at times. It was not because she cared for Tobin, but the thing displeased her. If she had been guilty of trifling, it is due to say she was now perfectly cured of that. It hurt to feel that any one could have grounds for believing she was a trifling, flirting girl.

When Tobin ceased to write to Claude, Lillie was in the humor to have him continue it.

"What's the use, Lil?" Tobin said sharply.

"The desperate fun of it," returned Lillie.

"No, it's all over now."

### CHAPTER III.

The day before Christmas Lillie met Wellie at the train. It was a mild winter day, unlike the blustery, cold one when she left there about a year before.

The two girls rushed together on the platform like colliding engines, and kissed in a happy greeting. Then Wellie grasped Lillie emotionally around the neck and bowed her head a moment on the other's shoulder. When she lifted up her fair, round, rosy face, a glistening tear stood in each eye.

"O fie!" she exclaimed, dashing away the tears with her small gloved hand on being discovered in her sentimental weakness.

She would have it appear her tears were joyful ones, while in reality they were produced by an entirely different cause. The warm, sweet greeting she received, when she had abundant reasons, as she thought, to expect a different one, overcame her and she wept.

Lillie suspected the cause of the tears but said nothing. Her sympathetic seriousness was but momentary.

"I'm so glad to see you," cried Lillie with a desperate, welcoming smile.

It was a singular, heart-felt meeting.

Lillie was burdened not a little with the secret of Tobin's correspondence with Claude in her name. She began to fear her own weakness and inability to keep it.

Wellie inquired not for Tobin, for she knew where he was.

That evening there was a public entertainment and banquet at the public hall, and the two girls of course attended. The general liveliness of Christmas in a pleasant little country town was apparent on every hand. There was movement and commotion, bustle and preparation, expectation and enthusiasm. The next day passed in yule-tide gayety and Christmas good cheer, and so occupied were the two young friends that no opportunity was offered to speak of that which lay nearest to the hearts of both.

Let us hasten the story.

The day succeeding Christmas these two girls, each with her own singular burden to bear, each holding a dead secret in her heart, were alone in Lillie's room, a perfect little bower of loveliness and blending colors. It is for lovely woman alone to touch a room as with a magic wand and make it burgeon into beauty and glory. This fairy retreat was aglow with thought and touch.

Wellie sat in a soft, luxurious armchair near the roaring coal-stove, and Lillie sat near—so near that their eyes and inner souls seemed to touch.

A picture of the great dead general—General Grant—was the object on the wall on which Wellie's eyes rested.

"Grant," she ejaculated, nodding toward the painting.

"Yes; that is a bit of my work," responded Lillie.

"It is good," returned Wellie. "I wondered whether you did not paint it."

"Yes; but it is a clumsy thing."

"I did not mean that. It is not a clumsy trick of the brush. It is really good." And Wellie meant this.

"But to yourself within you do not say so."

"I do, Lillie. I imagine portrait painting difficult; but anybody can see that it is a true and lifelike picture of the famous general."

"I did that the past summer during my idle moments. I did not work very hard at it."

"It needs no apologies at all. Few are good at portrait painting. To get the right expression and faithfulness to life in a face is no very easy thing, I know."

"Do you love painting?"

"I have tried it, but I have no ability in that direction," remarked Wellie thoughtfully.

"None at all. I fear I'm cut out to make trouble to myself and others," ventured Wellie, sadly enough indeed. "It was a remark that broke the ice."

"I know to what you allude," returned Lillie, bending forward in her chair in her excitement.

"Yes, you know but too well," and the remark was so broad in its application that Lillie presumed she knew more than she in fact did. "And I humbly beg your heartfelt pardon," she added, agitatedly.

And before Lillie realized it, Wellie flung herself on her knees and bowed her head on her lap. She sobbed like a brokenhearted child. And then Lillie, full to overflowing, bent down, put her hand gently on the weeping girl's head, and mingled her tears with Wellie's.

Not a word was spoken for several minutes, and the two girls sobbed as if they would not be comforted. After this pause of serious silence Wellie asked in broken accents:

"Say—do you—do you—forgive—me?"

"I've nothing to forgive," sobbed Lillie. Their fresh young hearts were stirred like great forest trees in a fierce, whistling storm.

"But—do you—you forgive—me?"

"Yes, to the fullest extent—all—all—everything!" assented Lillie, seeing that nothing but an affirmative and plain answer would suit her state of mind and soul.

"Now, you don't say that because I ask you for it?" said Wellie, still doubting.

"No, no, no! I say it from the bottom of my poor heart."

"God bless you, Lillie. I knew you loved me."

And the sobbing girl sprang up from her knees overjoyed, and caught Lillie around the neck and kissed her again and again. Once more their sad, sweet tears flowed freely and truly mingled as they fell. Lillie could not speak, so overcome was she with her emotions. After an interval in which the swelling emotions were somewhat calmed Wellie asked, still clinging to Lillie.

"You do not hate me?"

"No, no!" was all Lillie could respond.

"You still love me?"

"Indeed, Wellie, I love you as my sister," dashing away the fast flowing tears.

"I know it!"

Again the fountains of her eyes overflowed. Again she kissed Lillie passionately, and then walked quietly to the armchair and re-seated herself.

Her fears were allayed. The worst was over she believed. Peace had been made without any specifications as to the causes

of the trouble, like the treaty of Ghent after the war of 1812.

"Now, Wellie," Lillie began in a sort of confessional humor, "I want to say this; that really no harm has been done. But truly, I have given you cause to feel badly, I'm not angry, and I have need to ask your forgiveness."

"No, no. It is all my fault."

"But if I think I have done wrong, too, will you forgive me?"

"You don't need it."

"But will you?"

"Why, yes, with all my heart."

"There, now, I have regained your love, and I feel glad in my heart. I am to be blamed some in this."

"No; not so. All the blame is on me. I started it. I asked you to correspond with Claude."

You see both girls were laboring under some misapprehension as to the extent of the knowledge of the other in this very angled affair.

"Yes, I know," returned Lillie, "but that is not all. My big brother played you and Claude both a sort of scurvy trick, I fear, and I'm not guiltless, for I might have written it all to you, but I did not."

"I know," still not comprehending, "but then I should have written to you at the first and asked you about it instead of Tobin, and that would have ended it at once."

"I let it go, not thinking anything bad would grow out of it," said Lillie, "because it was such a good joke. It was all meant in fun."

"I'm so glad you did not really get angry over it," remarked Wellie, innocently, reclining back in the armchair and looking upward toward the ceiling just over the picture of General Grant.

"I was afraid you'd be angry," observed Lillie, in explanation of her feelings.

"O, no. When my sister put Claude's letters to you into my hands, I was thunderstruck. I did not want to believe my eyes. But there they were. And he had said he was not writing to you. That settled him forever with me. He was not honest or truthful."

"And will you believe it, I did not write one single letter to Claude," explained Lillie. They were approaching the main point as well as a common understanding.

Wellie turned to her so suddenly and with such an incredulous look that Lillie opened her eyes in startled wonderment, if not of half fear.

"Who *did*?" she exploded, in an astonished and doubtful tone.

"Tobin," meekly.

"Tobin!" Wellie's eyes exhibited more white than customary. A sort of palsied look overspread her white face.

"Tobin," repeated Lillie, in subdued emphasis.

"Do I hear you aright?"

"Yes, he wrote every letter."

"How?" still dubious.

"With the pen," her face brightening into a smile.

"You know what I mean," replied Wellie, with a rather stern, unanswering gaze.

"Well, I would not write, and Tobin took it up in my name."

"And you knew it?"

"Certainly. It was a huge joke. And I read all Claude's letters," Lillie laughed.

At first, in her present humor, Wellie did not see the point of the joke so clearly. After a moment's reflection she said, seriously:

"Well, that does not change my part in this mixed-up affair one bit. I am to blame. You did right in not answering Claude."

"I will not say anything about that. Now you understand what I meant by saying my brother played you and Claude a scurvy trick."

Pausing a moment, in which her thoughts seemed to be wrestling and writhing with each other and tumbling about like fighting gladiators, Wellie said:

"No. Tobin is a young man. All this was fun to him. I still am to blame for not writing to you. But I did not think of it at the time."

This one single point could not be removed from her too accurate and circumspect mind.

"To be sure, it was fun to Tobin to fool Claude."

"No doubt of that." After a second she resumed: "I have Claude's letters to you yet. I will show him." A new resolve had apparently crept into her heart. "I shall point out his duplicity through these letters. I am sure he ought to be taught the lesson."

"It was a rich joke," laughed Lillie.

"A tangled affair," the lines in her white brow smoothing out into a smile.

"I think the joke is on Claude."

"It is, it is!" Wellie fairly shouted in a burst of laughter. The ludicrousness of the whole thing seemed to break in upon her suddenly. It took all this time for the infinitude of the huge jest to remove the serious tone that dominated her truth-loving soul.

Long did they talk. It was a sweet, sisterly talk. Then they understood all about it, and perfectly understood each other. The conversation had cemented their souls like links of a chain. They were inseparable friends forever.

Again and again they laughed heartily over the monumental joke on Claude.

"See what he has come to by his smartness," commented Wellie.

Now Wellie did not dread so much to see Tobin. When he returned from Wingate she met him with a quiet demeanor he

could not divine. He had remained away as long as he could from his position, and only returned at last under a protest of his feelings. He did not want to meet Wellie. In his own mind there was no question of his guilt.

She greeted him politely and earnestly enough, to be sure. But her quiet air of assurance and self-poise puzzled him. He had taken no thought how she would appear to him, when he should meet her, and now that he had met her he was not fully satisfied about it. Reasoning a little afterward on the matter he believed he wanted her to greet him at first a little timidly. After all might she not regard him as the villain in the piece, since he had obtained Claude's confessions by stealth, as it were? He had not done it fairly, that was certain. And if she did so view him, there was no alternative. The more he thought about it now the less he wanted her to think evil of him. He had thought he would not care what she thought about it, but now, confronted by her composure and inexplicable general attitude, he really desired her good opinion. At all events it was certainly too late to remove those facts of the past that might give her cause to think ill of him.

What a singular ball of flesh the human heart is! One time it will, and the next time it will not.

But still there were her statements conflicting with Claude's. It never occurred to him before that her statements might be truthful and Claude's dishonest. Indeed, now that seemed to be the only real condition of affairs, and he wondered that he ever thought she might be untruthful. Of course, she was truthful and Claude untruthful, as the man as a rule is quite apt to be.

They sat down alone in the parlor before the great blazing fire in the grate. The red rays of the flame fell over them like a mantle, at the same time casting their shadows on the wall on this wailing, throbbing winter evening.

They were about to discuss a matter the end of which no prophet could foresee.

She looked bewitchingly lovely in a close-fitting, fashionably-finished dress of the latest pattern and material. Her little feet were just perceptibly pushed out from beneath the edge of her dress and extended toward the fire. Her ivory features and gentle smile and perplexing deliberation charmed him. He himself had been a fool all along. Now he wished he had not written to Claude as Lillie.

Without prefatory remarks "leading up" to the matter in her mind—disregarding all precedents relating to the prologue—she began the attack boldly thus:

"So you wrote to Claude instead of Lillie, I am informed?"

This hit him like an iceberg does a ship in midocean. The "I am informed" was not offensive, but it was apparently calculated. No blame could be imputed to her because of her open manner, and moreover, what did he expect from her. He was prepared for anything.

Girls can't keep anything. Lil, he reflected like one retreating within himself, has told the whole business. He should have expected it, for a girl can't padlock her lips and throw the key into the bottom of the well.

"You have been *informed* correctly," placing considerable stress on the word "informed," and uttering it with equal frigidity. Oceans would have frozen between them, and the farcical part is that neither wished such a frigid air. Both hoped for May weather, at least, before they ceased talking.

"And you returned Claude's letters to me through my sister?"

"I did. And was that a crime, pray?"

"And you think I stated falsehoods?"

"You wrote you'd explain. I supposed you had something surely to explain. An explanation implies something that needs explanation."

"And you feel all right about it?"

"I have not grieved one single moment over it."

"And you have no compunction of conscience, according to this confession, for any trouble you may have caused?"

Then she had had "trouble" over it with Claude. Then they were lovers in very truth, and Claude spoke truthfully. All this passed through his mind in an instant.

"I did not know before that I had caused 'trouble.' About that you know best."

"And you would not believe me, if I said I loved Claude and we are engaged?"

"If you are, it would be but natural. Generally two of the opposite sex marry."

"And you believe Claude called on me three times a week?"

"You have positively denied it." He was uneasy.

"But when I denied it, you tried to convince me I was untruthful by placing all of Claude's letters in my hands to read."

This was a clincher. It was just what he had done. He felt a little meanly now.

She did not want to quarrel with him—would rather, deep down in her heart of hearts, they were lovers. If they should eventually part as eternal enemies, she should cry her eyes out, she knew. But she could not do otherwise than she did. An obtuse, blind impulse drove her to her several accusing inquiries. She really believed him the best young man she had ever met in her life. Already he had cost her many tears and heartaches.

And he admired her spirit and intelli-

gence. He had never known a girl just like her. Nor did he wish to quarrel with her. But they had always been at dagger's points, so to speak, and now he desired a change. Someway there was something a little different in their attitudes on this evening after all. It was worse, or it was better, he knew not which.

"I sent you the letters," he returned calmly, "to show you I did not speak falsely, since you wrote you did not believe Claude said such things as I wrote he did. I had no thought further than to vindicate myself. But it seems you make more out of it. My integrity was squarely impeached by your positive words. You claim yours was impeached by my act in trying to prove myself innocent of the charges you put upon me. We were both right and both wrong."

This turned the tide of affairs.

"Do you think I'm guilty or not?" she queried half-appealingly, changing her tone of bold self-assurance.

"Are you through?" he queried, disregarding her petitioning inquiry, and continuing without waiting for an answer: "Then you get on the witness stand a few minutes."

"Well," demurely.

"Do you think I schemed to bring all this about?"

"You have not denied it."

"Do you think I forced Claude to make the statements about you that he did?"

"I thought nothing about it. I'll be as frank as you were to me."

"Do you think I would have returned his letters, or revealed my secret of this correspondence, if you had not made it necessary for me to do so?"

"I can't say."

"Are any of Claude's statements true?"

"In part."

"What part?"

"Must you know?"

"Yes, or the difficulty as to who is untruthful still remains uncleared."

"Manlike, you will force the weaker vessel to tell you all her secrets, lay open her most sacred heart like a book, just like the tyrannical 'beast,' man, usually does with a weak, defenseless woman."

"You are at liberty to do as you please in the matter."

"He stated the truth when he said his pa' was rich—that only."

It was her purpose to have him reveal the exact condition of his mind, instead of voluntarily yielding her circumstances at his dictation.

"Was he truthful when he said you were engaged?"

It was all coming out now.

"Will you believe me?"

"Whatever you assert solemnly here now I'll believe. Now is the accepted time

for truthfulness and honesty, if ever."

She felt the truth of this more than he did.

"We are not engaged," with peculiar emphasis.

Now, if he had paused there she would have had a vague suspicion that a little jealousy actuated him. She hoped he was a little jealous, for then she would know better his real feelings for her. She hoped he loved her just a little—no, a great deal. But she feared he did not. Indeed, she was not a little desperate at this stage of the conversation.

"Did he call on you three times a week?"

"He did not."

"Why did he write these things—do you suppose?"

"He probably desired what he wrote, and thought perhaps to cut off all obstacles in his way to that end."

"I believe you," said Tobin, in a tone of faithful trustfulness and seriousness that sent a thrill to her heart. It was not expected. Spring time was coming.

"You make me glad," she threw out impulsively. It had a dramatic effect.

"Do you think we have explained?" he inquired, touching secretly upon the rising tide of pleasurable sensations rolling into their hearts like a ground-swell, while a soft twinkle played with iridescent light in his eyes.

"Do you think you have explained?" she answered naively, glancing up archly at him from beneath her symmetrically arched brows. The tension was over; the new gentle feeling was contagious. Happiness cooed like a dove at the door of their hearts. It was what they desired.

"I do. Do you?"

"I do."

How much was in the mutual confessions and concessions.

"They say one never knows a woman's heart," he said, playfully, turning his meaningful eyes upon her poetic, lovely face. His look was not lost.

"They say is nobody, for they say man is deceitful and full of envy," she responded, at the same time sending forth a merry peal of laughter that filled the room like sweet music.

"Let that be as it may," he said, feeling that the old playful humor, so ravishingly uncertain and inspiring, had returned like a prodigal once again. It was honored by a position in a familiar and delightful niche in the walls of his soul.

"But are you satisfied with matters as they stand at this moment?" This query was leading, and Wellie so felt it.

"I am. Are you?"

"I am," he answered with a promptness that was in itself a declaration of his gladness.

"It was a neat trick and a dangerous one you played," she observed with strict adherence to the bounds of mental propriety.

"I confess the justness of your remark."

"I cannot imagine what other motives Claude had than jealous promptings," she observed.

"Doubtless that was it."

"He evidently thought to impose a falsehood on you for a selfish purpose."

"He will reap his satisfaction out of it, no doubt, if he has not done so already," he replied ironically.

"He does not know that you wrote the letters to him."

"No; but he ought to know, if he had an evil purpose in it," he urged, earnestly.

"Yes, and he *shall* know it. I hate one who tries to rob another of a friend. I hope this is not presumptuous." They were coming together. The tone of their hearts would not be suppressed. Sunlight was succeeding the clouds.

"No, no! You may rely on my friendship henceforward and forever. As I wrote to you, I admire honesty of heart and purpose. I like a girl who will not flirt."

This was drawing close. He said he "liked" and that, you know, is closely akin to "loved." She noted this with a tranquilizing sense of relief and gladness. Then he *did* like her metal. She was like no other girl he had ever met.

"I did wrong in not asking Lillie's permission to allow Claude to write her. But she and I have settled all that between us amicably," she added with a good deal of visible satisfaction stamped in bold expression upon her face.

"And the wrong I did was in not telling you I was writing to Claude in my sister's name, and all the time telling you what he said to me. But if I had told you, that would have spoiled it all, for no doubt you would have told him. I could not ask you to keep it from him, for I did not know your relationship. It was better for me to keep the secret, you see, than for me to ask you to keep it. Besides, you know, a secret is published when you tell one more—so it is said. I confess it was obtaining facts and secrets under false pretense, but since we have made our peace I cannot be sorry for my conduct."

If Tobin had so far cunningly avoided leaving a suspicion in Wellie's mind that there was even the slightest bit of jealousy in his heart toward Claude, this last remark must have supplied the deficiency. His allusion to the fact that he did not know their relationship proved that such an idea had found a lodgement in his mind, and may have been present during all the time of the scene of this story, for aught she knew. It might have been an incentive to his conduct all along.

"Allow me to say," she observed, "that under the actual circumstances you could have made such a request of me with perfect freedom and absolute safety."

This was simply a casting of the lead in order to sound the depths. He did not perceive her motive.

"But just there was the rub. I could not boldly ask you about such a delicate matter, a thing that was none of my business whatever, and I confess I had not the courage to do the only other thing left to do, which was to declare the honest truth and risk the consequences. After I got into the scrape I enjoyed it for a time, and designed never to say a word about it. But even this I was not permitted to do, as you now know."

The depths were not very great, she thought.

"I'm glad and I'm sorry the thing happened at all," she said archly and tentatively.

"I'm glad."

"You are?" with real surprise and a gleam of delightful suspicion.

"Yes." He ventured nothing more. He was waiting—waiting to observe her inner emotions and make sure of the truth he had a wild suspicion of and a new and genuine hope for.

"Why?" she asked innocently, as she would have him believe.

"Because."

"That's a woman's reason," she retorted gayly.

"Yes, but reasons are not sexual. They are common property, you know."

"But this is one my sex has pre-empted and has exclusive possession of."

"I'm sorry, because it serves my purpose so well now," he said dryly, shifting uneasily in his seat.

"What purpose?"

She was bewitchingly tempting.

"To conceal a truth."

"What truth?"

"The reason why I'm glad."

"Glad for what?"

"That this all happened."

"This what?"

"How dull you have suddenly grown."

"I want to know it all."

"Can you not imagine?"

"I'm easily imposed on. I have no suspicions. I'm not so ordained by nature."

"Well, glad our quarrel is over."

She had boldly led up to the point, and after all it did not out. She fell back upon her inner consciousness, and—lamented.

They sparred long after this fashion. The mental foils they fenced with clashed and bent and even struck fire sometimes.

Their shadows from the paling firelight became less distinct on the wall, and seemed to be blended together as one. The shades

f a raw winter night had long settled down over the cold world, and the winds whistled bitterly without.

Their talk had ended. But they knew each other better. Each had now a lively springing hope, that was not possessed before, and a soft gladness that could neither be explained nor reasoned away.

The conversation had untangled the kinks of the thread of fate spun by the Parcae, and Atropos had sealed their destiny. Tobin's heart was laid open to Wellie as clear as a book.

#### CHAPTER IV.

Wellie's mother had arrived to accompany her daughter on her return home, and the invitation was extended to all the family to visit them, and done so zealously that Lillie had a suspicion that the mother had an object in it.

When Wellie returned home, she wrote Claude a letter emphatically ordering him never to burden her with his presence again, for, she said, she had no use for one who would scheme to deprive her of a friend.

Claude knew whom she meant by "friend," and a new revelation was born to him. He had played his cards and lost.

When she added in her letter that Lillie had never written a letter to him, but that Tobin had written all the letters in her name, his anger knew no bounds. He sat down and wrote a mean, insulting letter to Wellie, accusing her of plotting to have this imposition done to him, declaring Tobin to be the meanest scoundrel unhung, and swearing grossly and violently with the pen.

That letter was the end of Claude, as to this story. He never again "bobbed up serenely."

Of course Tobin and Wellie renewed their correspondence.

In a year wedding cards were out announcing their approaching nuptials.

#### IMPROVING THE OCCASION.

BY W. H. STUART.

The single tax contingent are "improving the occasion" of the failure of the late strike to urge the adoption of their favorite nostrums, no less than three writers in the *September Magazine* "pointing with pride" to the taxation of land values as the complete solution of the labor problem; the "panacea" that will forever make strikes as impossible as they would be unnecessary.

There is something both touching as well as amusing in the devotion with which the victims of economic superstitions will hug delusions that have been fully and repeatedly exposed, and to which they can offer no valid or reasonable defense. For instance I have shown conclusively that under present economic conditions of concentration of wealth in the hands of the capital-

ists class, the production of commodities on a grand scale, by the use of costly labor-saving machinery, makes competition impossible. This concentration of wealth and system of large production is gradually driving to the wall the middle class, the whole tendency of modern industry is toward this gigantic system of production. Already we are told the production of four hundred different commodities are controlled by "trusts" or "syndicates." It is no longer possible for a man of even respectable capital to compete in cost of production against those gigantic trusts and combinations. Competition is simply out of the question. The success or permanency of any one of these various trusts would not be in the slightest degree effected by any change in our system of land tenure or taxation.

To talk of the advantage that "free access to natural opportunities" would be to the man without capital is the merest "tommy rot," which any man of even ordinary intelligence ought to be ashamed of. If instead of owning the land upon which the Homestead and other plants are located, Carnegie was compelled to pay a yearly tax or ground rent, in what way would that make competition any easier against him? The land upon which his plants are situated is of very moderate value, he is under no compulsion to build in the heart of a great city, nor within fifty miles of one. A hundred other locations would be equally good for his purposes. It would be a matter of complete indifference to him what system of land tenure or taxation was in effect, providing security of tenure was assured him. What has control of natural opportunities to do with the success of the great sugar trust, or the Armour meat trust, or the great cotton seed oil trust, or the flour trust, or the leather trust, or biscuit or match trust, or insurance trusts, and a hundred others that might be enumerated, that are neither the result of our financial policy or would be effected by any change in our land system.

A bonanza farmer produces wheat for 33½ cents per bushel, a small farmer for \$1 per bushel. Would not the same relative difference in cost be maintained under any land system? Suppose the average rental value of agricultural land under a single tax regime was \$2 per acre, how much better off would the small farmer be in competition with his capitalist competitor? With iron, lead, zinc, silver and other mineral lands thrown open to all for a stated annual rent or royalty to the state, how would the man or men without capital, or with moderate capital, compete in cost of production with combinations of wealthy capitalists controlling every improved device or machine for extracting the ore and

handling it expeditiously and with the lowest possible cost?

If an employe in, say, a brewery was dissatisfied with the wages offered by the brewing syndicate and he had under the benign influence of the single tax "easy access" to land, could he start another brewery in opposition? If, instead of being compelled to pay \$5,000 for a site for a flour mill, it could be procured for an annual rental of say \$500, would that make it any easier for the man without capital, or the man with moderate capital, to "buck" against the flour trust? The man who would seriously assert that the fifty millions accumulated by Geo. M. Pullman was the result of the private ownership of the land upon which his plants are located, or upon the rents derived from the use of the land by his tenants at the town of Pullman would be properly put down as a driveling idiot. The fact is our whole system of trade, commerce and production would continue under a single tax regime substantially as at present. Capitalism and its corollary, wage slavery, would be as rampant as at present. The man without capital, with only his labor to sell, would under the stress of devilish competition with his fellows be compelled to sell it to those who controlled the instruments of production for a bare subsistence wage or starve. Any assertion to the contrary is a mere assumption with not a leg to stand upon in the shape of an argument.

It really appears to me that until single taxers can show in some valid and reasonable way how the adoption of the single tax would place all upon an equal footing, or give all an equal chance in the race for a living; how the present discrepancy in the cost of production between the small and the large producer, both in manufacture and agriculture, would be removed by the taxation of land values, until, I say, this can be shown clearly, single taxers ought to have the grace to cease their interminable and insufferable "twaddle" about the advantage of "free access to natural resources," and allow the space thus wasted in our magazines and papers to be devoted to some useful purpose.

Mr. S. D. Guion, under the caption "Live Questions," says: "As long as the land-holding class can hold the masses in subjection to that superstition, (that private ownership of land is just,) monopoly will not fear but that it can draw to itself *all the wealth the world can be made to produce except a bare subsistence for those who labor and produce it.*" The italics are mine. By monopoly it is of course to be understood that Mr. Guion means land monopoly. This is, of course, merely stating in other words Henry George's dictum. "Why in spite of the increase in productive power do wages tend to a minimum which will give but a

bare living, is that with increase in production, rent tends to even greater increase." "Rent swallows up the whole gain and more than the gain." This assumption rests on as scientific a basis as that of Bro. Jasper's, that "de sun do move." Indeed George's assumption is even less plausible than Bre'r Jasper's, because the sun does really appear to move, while George's assumption is not even plausible, on the contrary, it is opposed to the intelligent observation of every one not a mere doctrinaire. George quotes no facts or statistics in favor of his assumption, he merely assumed it and his uncritical followers merely repeat it automatically, as if the proposition was a self-evident one, needing no defense or ratification. But statistics, facts, observation and common sense all discredit George's theory. For the past ten years wealth has been increasing at a greater pace than any other period in the world's history. Yet during that time rents have been steadily decreasing, not only in this country but also in England, Germany and other countries. In this country economic rent of the agriculturing areas of the New England states has been nearly wiped out. This depreciation is quite as marked, if less in degree, in the great Middle and Western states. Only in a few favored localities have urban or agricultural rents increased. Hon. D. A. Wells, in his "Recent Economic Changes," quotes English authorities to show that the rent of land and value of products in both Germany and England have declined enormously. While in this country the fact is too patent to require verification.

Let us suppose that the atmosphere was as subject to private monopoly as the land, and for the use of which rent could be demanded. Air would, of course, be greatly in demand wherever population had concentrated. The larger the city and the greater the business the more valuable would be air, and the greater rent would be exacted for its use. Under such a condition of things how easy it would be for some shallow economist to declare that the private monopoly of air was the cause of increasing poverty; that rent of air tended to absorb all surplus wealth; that the cure for poverty was to abolish all private property in air. It would be pointed out that labor, which produces all wealth, cannot even draw a breath without paying tribute to the private monopolist. That to place all men on an equal footing all that was necessary was to tax the rental value of air to the use of the community.

Would not the reasoning be just as plausible as the arguments offered in support of the confiscation of rent of land? Yet air is absolutely free, and poverty abounds. Equally fallacious is the theory that the abolition of private property in land would,

under present economic conditions, solve the economic problem.

Under the caption, "Land Monopoly," Mr. B. C. Stickney invites the readers of the *Magazine* to examine some argument I offered in the May issue. He says: "From the reading of Mr. Stuart's article, one unfamiliar with the subject would receive the impression that the purpose of the single tax men is to make idle agricultural land freely accessible to all who wished for it. That is so; but they have another purpose of greater importance, which is to make valuable land, city, mining, timber land, etc., worthless for speculative or monopolistic purposes." Which goes far to show how slovenly and careless a reader Mr. Stickney is of the writings of his opponent. On the contrary, I have insisted that the adoption of the single tax would entirely prevent the holding out of use of land of any description, urban or agricultural, for which there was not immediate demand or use. Indeed I have based an important argument, showing the insufficiency of economic rent, on that very fact. I have shown that present rent is monopoly rent due to the monopolization of unused land; that the adoption of the single tax would throw upon the market hundreds of millions of acres of the finest agricultural land, and hundreds of thousands, and perhaps millions of urban and suburban residences and business lots, with the inevitable result that economic rent would probably not equal a tenth and perhaps not a twentieth of present rent; that in consequence the term "single tax," as implying its sufficiency for all the purposes of revenue, is a misnomer and absurd, exhibiting in a striking manner the shallowness of the Georgian philosophy.

Mr. Stickney admits that it may be true that men without capital would be unable to utilize natural opportunities, but contends that men of moderate capital could and they would be benefited, and would give employment to men without capital. Well, are the men of moderate capital who now own their own land successful? and are they giving employment to the unemployed? Does Mr. Stickney really believe that we have not farmers enough to supply agricultural products, does he not know that the introduction of machinery is every year making fewer men necessary for the production of the natural wealth; that under our present wasteful and isolated methods of farming, one-third more men are employed than will be necessary under a scientific system of production such as obtains on the "bonanza" farms; that as soon as agriculture is as fully controlled by capitalists as manufacturing industries are, that one-third of the present farming class, both owners and laborers, will be unneces-

sary. The adoption of the single-tax will not have the slightest deterring effect on this concentration of capital in agriculture, on the contrary it will only hasten it. Suppose one hundred men are engaged in an industry in which each works independently, owning and controlling individually the tools necessary for the creation of the product. Now suppose one of the number invents a machine that with the labor of ten men does the work as efficiently as the hundred men formerly did. Three or four of the men having saved some money, purchase the machine, build a factory, set ten or twenty of the men to work and undersell the other workmen and thereby monopolize the business; suppose the single-tax is in effect and that easy access to agricultural land of the finest quality can be had on payment of a reasonable rent. But they find that the same revolution in methods by the aid of labor-saving machinery is making it as impossible to compete in agriculture as it was in their former occupations. Is it not inevitable that under such conditions "wages" under competition among the workers will keep at the subsistence point? If not, why not? If Mr. Stickney is not totally blind to the tendency of capital to concentrate, he must see that even now the man of moderate capital is being rapidly wiped out by the gigantic trusts and syndicates that have the principal industries of the nation in their grip, and when in a few years they dominate agriculture and horticulture as fully as they do other industries, the man without capital will be as powerless with free land as he is at present, indeed more so.

Now suppose in the case of the hundred men referred to, that in place of three or four of this number owning and controlling the new tools of production, and the rest working for them for competition wages, that the hundred jointly owned and operated the new machinery in the interest of all, how would they be effected? Why, simply in this way, they would either produce more wealth, and thus increase the wealth of all, or, they could keep up the old rate of production and thus reduce their hours of labor. Does Mr. Stickney think this would be a wicked thing for the workmen to do? or does he think private ownership of the tools of production by the few, and consequent degrading wage slavery for the vast majority, the best and most scientific form of production?

When Mr. Stickney speaks of interest as being "nothing but an indirect return for the labor that produces the capital," he is talking the veriest claptrap that shows his knowledge of economics to be of the kindergarten order. Capital produces nothing, without labor it is dead, inert matter, it is entitled to no "return." All wealth is the product of labor, and of labor only. Capi-

tal when produced by labor is a valuable, and indeed, an indispensable auxiliary (under present conditions) to labor. But the capitalist, as such, is not a valuable auxiliary, or, indeed, a factor at all in the production of wealth. Under our present industrial system the laborer produces all wealth, but permits the capitalist to retain the most of it in the shape of rent, interest, and profits, while the capitalist generously returns to the laborer sufficient of the product that he produced in the shape of "wages" to maintain a bare living. Now would it be an awful foolish thing on the part of the laborer to retain all of the product in his own hands and devote part of it in the shape of capital to the production of more wealth, and let the capitalists earn their own living or starve? For, recollect, that a capitalist, as such, no more produces capital than a landowner does the land. Both rent of land and interest on capital represents robbery of labor, pure and simple. The man who defends rent, equally with the man who defends interest as the "just return to capital for its aid in production," is either an ignoramus or a knave. Just in proportion as he has an intelligent knowledge and conception of the science of political economy, just in that ratio is the presumption that he is a knave.

The ideal of "a fair day's pay for a fair day's work" is a contemptible one, and shows that the man who gives that as the *ultima thule* of the labor problem, has a disgracefully ignorant conception of the rights of labor. "Wages" mean a part of the product, it implies wage-slavery and an idle and useless capitalist class, who prey on the ignorance and credulity of their dupes. Under a proper industrial system the term "wages" will have no meaning, for the laborer will receive the full product of his labor, free from the robbery of rent, interest, and profit. Under such a system there will be no use for the capitalist, the landowner or the profit monger. It is, of course, quite possible that a capitalist may also be a producer, as a producer he is a laborer and entitled to pay. He may be the manager of a business in addition to being a capitalist, if so he is entitled, to remuneration for his "aid in production" as manager, but he is not entitled, as "wages" of superintendency, all the product except a bare living to other laborers. But as a mere capitalist, he is a non-producer. For note, the capital is that portion of wealth devoted to productive purposes from which the owner expects to receive a return "without risk or personal exertion," and the man who obtains the product of the labor of others without giving the product of his own labor in return is a robber, equally and on the same footing as the landlord.

proving the occasion" myself. We are living under a system of "free contract," and free competition. Production is carried on by private citizens under competition with other citizens. Under this system it is agreed that private ownership of the means of production is the correct way to carry on our industrial affairs. The owner of the "means of production" is permitted to treat labor, like raw material, as a commodity, and to purchase it in the cheapest market. There is no minimum wage that the law compels him to pay. If he can hire men for 25 cents per day he has a perfect legal right to do so, and indeed competition compels the capitalist to buy his labor in the cheapest market; if he don't his competitor will, and drive him out of business. The law guarantees him in the possession of his property, and agrees upon the payment of an annual tax to defend him and his property against, not only foreign aggression, but also from aggression at the hands of his fellow citizens. Every officer in the country, from the President down to the humblest constable, is sworn to do this. The larger number of our laws relate to the means for making the owners of land and capital secure in their possession, prescribing penalties for any act of aggression and providing means of ascertaining the amount and nature of such aggressions. On the part of the man without capital, the law provides that he shall be free to work where he pleases and at what rate of pay he pleases; if he can not get one dollar per day for his labor he is allowed to accept a half or a quarter of that sum, or if he prefers, he can starve, and by the way, frequently does. The law forbids him to trespass on the land or property of others or to interfere by violence to compel an employer to pay him higher wages, or to prevent a fellow employe from accepting the job he resigned on account of insufficient wages. Now, the founder of this order of things argued that human selfishness was the best and only proper incentive to exertion; that with perfect freedom men, while pursuing their own selfish ends, would be unconsciously subverting the interests of the whole community. As time rolled on and machinery was introduced and the use of steam as a motive power became universal, the small isolated worker found he could not compete with the new tools of production from which, by an economic revolution, he became divorced, and he was forced to work for the new capitalist class, who controlled those new tools of production, for a wage that represented not the value of his product, but of his necessities. The proletarian soon discovered that the only "freedom" he had was to work for a wage that yielded him a bare subsistence or starve, until now the whole machinery of production is monopolized by a few, while the

I will close this article by slightly "im-

great majority are forced to work for a continually decreasing wage, while even millions, owing to the rapid displacement of men by machinery, are unable to get work at any wages, with the prospect that a proportionately decreasing number will be required by the capitalist class to carry on production.

This is the system now in force. If the producer is satisfied, there is nothing for him to kick against. He is in favor of the laws that guard private property, and when his own property rights (if he has any) is invaded he is prompt to appeal to the law for protection, and he should be equally ready to have the protection of law extended to others. He elects lawmakers for the express purpose of continuing this system of private property and to enact laws guaranteeing its inviolability. Now, I repeat, if he is satisfied with free competition, and the private ownership of the means and instruments of production, let him uphold the laws, let him not sneer at them when it happens to pinch him, and be quite indifferent when it pinches others. Nor should he sneer at "government," because government and the laws are what he has made or what he has tacitly agreed to, neither let him sneer at the military or militia that are organized to enforce the laws relating to private property and free contract. But if, on the contrary, he is satisfied the system is an unjust one, that enables the few to accumulate enormous unearned wealth, while its producers starve, which generates cunning, dishonesty, tyranny, on one side, while misery, poverty, degradation and ignorance are the lot of those on the other (the under) side. Then let him come out boldly, intelligently, and manly in favor of a system of fraternal co-operation, where production will be carried on for use, not for profit, and in the interest of all the people instead of a few, then will be ushered in an era of unsurpassed peace and prosperity such as the world has never witnessed. This can be done without a strike (except at the ballot box) and by legal and constitutional methods. This is the only strike against capitalism that will succeed.

### INSIDIOUS OPTIMISM.

BY MARIE LOUISE.

A pessimist is one who takes cognizance of the dark side of human affairs and wholly ignores the bright one. An optimist is one whose mind operates conversely and sees but the brilliant shades on the human picture, entirely overlooking the sombre coloring of the background. The pessimist lacks hope for and faith in mankind, the optimist lacks penetration and mental energy—both, the one and the other, lack mental balance. The truly intelligent compre-

hends that the human being is endowed with immense possibilities, good and bad, which opportunities invariably develop, and that evil, which is but undeveloped good, can be eradicated only by taking full cognizance of it, diagnosing it carefully and applying to it proper remedial treatment. The well poised and virile mind grasps with a firm grip both the good and the evil, measures and adjusts them and endeavors to establish equilibrium between the constructive and the destructive forces of society, knowing that a perfect balancing of social elements is necessary to produce true and lasting happiness. By overlooking the innate goodness of mankind the pessimist makes all progress difficult; by taking no account of the evil forces at work and permitting them to take root and thrive the optimist makes progress impossible. The influence of the latter is far more baneful than that of the former, for to be conscious of the existence of evil is to be striving to remove it, whilst to ignore it and let it go unhampered, is to foster and entrench it.

But far more pernicious and deadly are pessimism and optimism when assumed and used as a tool by designing persons to work out their own personal objects. Men in authority use both of these to successfully subject their fellow-men and make them tributary to their own wealth and power. With that weapon in their hands the unscrupulous parasites are enabled to perpetrate deeds of darkness and fiendishness. Our political rulers and their obsequious servants, the press of the country, carry their assumed optimism to a degree truly marvelous. Although starvation has strolled all over the land since twelve months, although thousands of unfortunate men and women have sought premature death to escape the horrors of forced idleness and poverty, our mercenary press continues to go into paroxysms of occultation over our glorious institutions and the unprecedented happy condition of the masses of the people. It is urgent for them to impress upon every individual poor that his is an isolated case, the result of some accountable or unaccountable accident, but that the rest of the nation enjoy undisturbed prosperity. What can a poor wretch do when he reflects that the merciless hand of fate has selected him, among all the rest, to smite him down? What else but despair can his poor lonely and lonesome heart feel? The villains who thus cast him away as a useless individual know that his sense of isolation shall madden him and fling him into murderous despair, that he will either slaughter himself or do rash deeds by which he shall be expelled from society. But what of it? What is a man's life, what matters the torture he is made to endure so long as the other unfortunates are not permitted to know about their common misery and do not rise in a

body to question the cause of their wretched position and endanger the peace of the political and financial rulers?

The New York *Sun* correspondent of Fall River, on August 29th, in the matter of the strike of the cotton mills hands, writes:

A lot of misinformation about the condition of the employes in the mills here and in New Bedford have been sent to the New York *World* and to other newspapers which make it a business to try and render everybody dissatisfied with life and are constantly stirring up men to revolt against social order. Here is a sample:

After reprinting a table of wages paid to cotton mill operatives which was taken from an old statement of the Bureau of Labor of Massachusetts, and which shows that more than one-half of the employes in cotton mills got less than \$5 a week, the story proceeds. These figures tell the story of the strike. It is a simple struggle for existence. Their conditions have been not unlike those of Germany and Belgium where a large class of unskilled laborers and mill operatives find it absolutely essential that the mother and every child who can earn as small a sum as a mark a week shall share in the burden of life. The cut in wages which caused the present revolt was a summary announcement that a reduction would be made on August 20th, and that the details would be given out by the overseers. When the overseers announced the degree of the reduction it is said that fathers of families were seen to sob like children.

Then the insidious optimist, the worthy correspondent of the notorious New York daily, strikes from the shoulder and in order to prove the absurdity of the "story," as he calls it, as well as the unreasonableness of the strike, unrolls the following long list of statistics:

The best answer to these stories are, of course, the figures. Here is a list of the mills of Fall River, the weekly pay roll of each, and the average wages paid:

MILL.	NUMBER EMPLOYED.	PAY ROLL.	AVERAGE WAGES.
American Linen Co. . . . .	1,000	\$5,600	\$5 60
Annan . . . . .	135	675	5 00
Barnaby . . . . .	400	3,000	7 50
Barnard . . . . .	350	2,400	6 85
Belmont . . . . .	120	650	6 45
Border City . . . . .	1,200	7,500	6 25
Bourne Mills . . . . .	475	3,100	6 74
Chace Mills . . . . .	470	3,400	7 24
Conant Mills . . . . .	175	1,300	7 42
Cornell . . . . .	400	3,000	7 50
Davol . . . . .	425	3,200	7 52
Durfee . . . . .	1,050	7,500	7 14
Iron works . . . . .	1,800	12,000	6 66
Fall River . . . . .	355	2,300	6 40
Fall River Merino . . . . .	150	800	5 33
Flint . . . . .	500	300	6 00
Globe Yarn . . . . .	1,025	6,850	6 68
Granite . . . . .	1,200	8,200	6 85
Hargraves . . . . .	1,000	5,500	5 50
Kerr Thread Company . . . . .	500	3,500	7 00
King Philip . . . . .	1,200	10,000	8 33
Laurel Lake . . . . .	365	2,200	6 29
Mechanics . . . . .	570	3,850	6 75
Merchants . . . . .	1,350	7,600	6 63
McAcombs . . . . .	325	1,600	5 00
Narragansett . . . . .	400	2,550	6 37
Osborn . . . . .	750	5,300	7 06
Pocasset . . . . .	720	4,600	6 54
R. Borden . . . . .	710	6,000	8 04

Robeson . . . . .	230	\$1,700	\$7 40
Sagamore . . . . .	900	6,000	6 66
Sanford . . . . .	350	2,100	6 00
Seaconnet . . . . .	400	2,500	6 25
Shore . . . . .	625	4,000	6 40
Slade . . . . .	425	2,600	6 16
Stafford . . . . .	600	5,300	6 50
Stevens . . . . .	150	1,200	8 00
Tecumseh . . . . .	400	3,300	8 02
Troy . . . . .	390	2,700	6 90
Union . . . . .	900	6,000	6 66
Wampanoag . . . . .	800	5,200	6 50
Weetamoe . . . . .	400	2,650	7 12

In every cotton mill a large number of children between the ages of 14 and 17 years are employed. In these averages their wages are included, and that brings the average down considerably lower than it would be if only the wages of adults were included. It will be seen from this table that there are only two mills in Fall River where the average wages, including children, is as low as \$5 a week. There is none where the average wages is less than that. There are only 5 where the average wages is less than \$6 a week. There are 14 where the wages average over \$7 a week, and 4 in which the average is over \$8. The average of all is \$6.76 a week.

In 1880 the average wages paid was \$6.69, and at that time the product of this labor was selling at 3½ cents a yard, a full cent a yard more than to-day.

Stories of starvation and struggles for existence are resented by nobody more than by the men and women who are now on "vacation." The weavers, who are represented as earning \$5 a week, average more than \$7, and some of them more than \$8. Some earn as much as \$9. They get 18 cents a piece for their work. The best weavers average eight looms, and each loom produces a piece a day. That nets the weaver \$8.64 a week. The average good weaver can manage seven looms and earn \$7.20, while a poor weaver will average six looms and will earn nearly \$6 a week.

The *Sun* correspondent from Fall River struck from the shoulder but he sadly missed his mark. Not even the pink-colored spectacles he wears, magnifiers though they be, can bring out any figure by which a revolt against the present social order should be condemned.

What does his long list of statistics prove? Admitting these to be correct, (God forbid that I should question the accuracy of statements made by great corporations!) are not the wages of overseers, of large and small bosses, included in them? Is not a collateral fund devoted to private secret work of which some employees, related to Judas by consanguinity, are the recipients and which invariably appears among the list of "wages paid" in the cash books of the establishment?

Were but these sifted out, how much per capita would remain for the simple working bee?

But I will even go further towards meeting the gleeful optimist, and admit for the sake of argument that the wage money showed in the list was paid entirely to the simple workingman. In his summing remarks, he states that the average wage is more than \$7 per week and rises to sublimity by declaring that some weavers even "net \$8.64 a week." This, in his estimation, is all that a workingman could claim, all that is necessary to provide for his rude tastes and vulgar needs, all that capitalists could be made to pay for one of their implements of production. Very well, we will

agree even on this. But when the \$7 a week sustain a reduction of 20 per cent. what is left to the worker? \$5.60, and this for full working weeks. Time lost on account of sickness, holy days, etc., reduces the income considerably.

Can a man of sound mind, not pledged to Satan, be found to affirm that a family can live as human beings ought to do with so meagre an income in a country where rents are high and commodities dear? I would suggest to the pedantic correspondent of the *Sun* to try the experiment for a few months and see how long the pink shade of his spectacles would keep its color. To the rational thinker and the free-minded, nothing is more loathsome than the miserable cant of mercenary and insidious optimists. They resemble the charming snake which fascinates its prey before killing it. Our house may be burning over head, but with smiles and seductive voices they say to us: "Sleep in peace, happy ones, angels watch over your slumber."

Yes, angels watch over the slumber of the masses, angels born in the infernal regions! "Eternal vigilance is the price of liberty," let the workingman bear this axiom in mind. Let the individual toiler understand that the hardship which presses upon him also presses on the millions of men and women who labor throughout the land. Let him scoff at the serpent which tries to charm him into apathetic thoughtlessness. For things to be right about him he must feel them to be so, no one can judge for him. And if things seem wrong to him, his nature as a man bids him to make an effort to righten them and his human sympathy commands him to extend his hand to his fellow workers and sufferers in order to make a strong and united effort for overthrowing the evil which weighs upon them. What if all the press and the pulpit of the country sing themselves hoarse in eulogy of our present social conditions? Decidedly, they have a right to do it and to do many other things as foolish. The press and the pulpit are the beneficiaries of present established authority and are interested in the preservation of the present social order. But the cotton mill workers of Fall River and New Bedford, the United Miners' Association, the Pullman employees and the other discontented, has just as much right to protest and rebel against that present social order which proffers them the handsome sum of \$5.60 in exchange for six days of arduous work. They feel outraged at being classed among the cheapest implements of production even though the *Sun's* correspondent of River Fall be outraged at their impudence in finding fault with so magnificent an income as \$5.60 per week. The dictum that "what is sauce for the goose is sauce for the gander," is not exclusively true, or rather may be interpreted different

ways. The mine operators, railroad corporations, cotton mill owners, Pullman and other monopolies adore the present social and economic régime through which millions flow into their pockets swifter than do cents in the pockets of the workers whose toil, applied to natural opportunities, create all the wealth. These money kings adore our social system and I commend them for their good taste. The wage workers, it seems, take exceptions and refuse to kneel before the idol, nay, they even carry their audacity to look at it with angry flashing eyes and to swear at it. Well, what are the money kings and their satellites going to do about it? It is not a theory, it is a fact that confronts them. To win the discontented back to capitalistic sense of reason the insidious optimists will have to lose no time in crying out the beauties, abstract and concrete, of our present social regime; they will have to double the loudness of their blast and raise it to a roar.

In the same issue of the *Sun* in which the River Fall strike was discussed by its correspondent, an editorial on "The Causes of Suicide" endeavoring to prove that the large amount of suicides was not due to "poverty or actual destitution." That was the same tune of insidious optimism played in another key. The editor of the *Sun* seems to have forgotten all the philosophic axioms he knew when he became one of the shining lights of Brook Farm some forty years ago. Social iniquities are not felt by the starving alone, they press down and madden men and women for whom the question of a piece of bread has never existed. Every suicide reveals that an element of tyranny is lurking somewhere, around and tyranny breeds degradation, hunger, destitution and crime. Of all the phenomena which point to a social iniquity and political corruption, suicide is the most appalling because it is the greatest of violence against nature. Were not our consciences benumbed by false ethics, we would have no rest until this grim phenomenon had disappeared from our midst. Its disappearance, of course, necessitates the removal of the causes that produce it, and they are the same causes which force workmen into a strike, which permit capitalism to demand federal protection, which turn gatling guns towards the assembled people, called mob in plutocratic parlance, and which swings open the prison gates to receive and confine the brave and devoted captains of labor's legions. No cloak of insidious optimism is ample enough to cover up the whole of that sad picture.

## THE HIGHER DUTIES.

BY JOSÉ GROS.

One of the principal and brightest editors of one of our principal New York dailies was recently asked: "Is the press

capitalistic?" The editor assumed an indignant expression as if the question embodied an insult. Did he deny the implied fact? He indorsed it without his realizing it. He said: "A newspaper is a business plant, and, like all business, strives for success in a legitimate way." Well, our Mr. Pullman has done that, our Mr. Frick, our Astors and Vanderbilts, our syndicates and corporations have done the same. What is the meaning of legitimate when applied to the purposes of business success? To accumulate wealth through all those processes of wholesale robbery that have from time immemorial been fixed up, first by despotic kings with their councils, later on in legislative halls, and by so-called representatives of the people, but really representing their own selves as a grand totality, and no matter what the good intentions of a few of them may have been.

Let us now return to our editor. The success of a newspaper, he said, is conditioned on its circulation. Hence, the editor must please his readers in all things. Let us remember the last three words. He added: "The newspapers comprise the edifice of our liberties. They guard the rights of the people, look after the laboring classes, and protect the defenseless from the tyranny of monopoly," with considerable more of that trash.

So there you have it in that grand temple of liberty. Here, in our own nation, we have yet a defenseless class in need of protection against the tyranny of monopoly, laboring masses to be protected and looked after as if they were a pack of babies, or serfs, or domestic animals, incapable of protecting themselves, with no brains of their own to know what they should have and how to claim it. And the protectors of those defenseless classes are a few large dailies in our large cities. That is an emphatic acknowledgement that such classes are not protected by our own laws, that tyranny and monopoly, wholesale robbery, prevails yet in that grand temple of liberty of ours.

It is splendid to have such a confession from one of our most brilliant editors of one of our big dailies, with a large choice circulation among the top classes in that grand commercial metropolis of ours, New York City. And remember that those great protectors of our defenseless sheep, the laboring classes; that such protectors, the big dailies, are business plants, run for business success, bent upon having a large circulation, and hence perfectly willing to please their readers in all things.

The idea that at least one of the objects of a large newspaper should be to educate, to lead men into truth, into unselfishness, into the suppression of all that tyranny and

monopoly that yet prevails among us, by the confession of our sweet protectors, that idea is nowhere in the minds of our editors of our big dailies. The readers must be pleased in all things. We must have business success, dollars and cents. If we happen to write for the potentates, whose wealth is constantly growing under the action of our laws of tyranny and monopoly, why should we run the risk of displeasing them by intimating that monopoly and tyranny could be suppressed through such and such legislation? Perhaps that would delay business success, or make it less complete. Very likely it would. If so, there you have a temple of liberty in which we punish the defender of truth and reward the defender of lies. So much the more reason for somebody to risk something in order to reconstruct that rotten temple of liberty where we give *carte blanche* to the wrong-doer by wholesale, as long as he keeps within the limits of human law, broad enough for all practical purposes.

Look now at the low conceptions of men implied by the above criminal philosophy, peculiar to our kid glove anarchists, the patrons of laws of iniquity and sin. Are men so depraved, so vile, so low, that they want to be pleased in all things? Are they so dead to all noble perceptions as that? It may be so with some; but, if that was so with all or with the most of them, then humanity would have perished long ago. What has perpetuated the race, in the midst of all the criminal excesses of the ruling classes, in all nations and historical periods, now a little more, now a little less, is the goodness of the race, a silly kind of goodness if you like, the goodness that submits to outrages and injustice from century to century. Without that, the oppressed would have long ago suppressed all vestiges of what we call civilization.

Yes, most men are fond of all that is grand and noble and true. You may need a certain degree of tact in expounding a new truth. You may need considerable patience and expect some kicks from those whom you lead into higher conceptions of life. It very often happens that those who kick the hardest when they first hear of a new truth, are the greatest defenders of that truth later on.

Take again that bright editor above mentioned. He is simply the type of many men to-day in our grand temple of liberty. While claiming to be the protector of our working classes, in that interview we have been referring to he plainly showed the wrath of the reprobate against the workers who dared to assert their rights of leaving their bosses if displeased with them. All because so many did it at one time in Chicago, not long ago, and that brought some inconvenience to many of our fine ladies and gentlemen

through the land of liberty. And again that editor simply reflected the mental condition of most of the men from whom we should expect better than to become all at once like so many demons escaped from the infernal regions. Perhaps that proved how guilty their consciences felt. Their temple of liberty was shaking. What right had the temple to play any such tricks?

We have, of course, at least two kinds of liberty; that of the top men, or those who struggle to be at the top, who expect or wish to be there before they descend to their graves, and the liberty of those who want neither top nor bottom. The former seems to be perfectly compatible with tyranny and monopoly, with defenseless classes to be protected by somebody. That is plutocratic liberty. At the opposite pole we have the simple, plain liberty which means absence of tyranny and monopoly, absence of defenseless classes, nobody in need of protection from anybody else, everybody equally protected by the eternal laws of God's universe.

Now please don't come to us with that nauseating platitude for every song by all our tyrants in church and state, the selfishness of men. We know all about that, perhaps more than we need. But where do you find that selfishness, at the top or at the bottom of the social structure? In both, of course; the crude at the bottom, the refined and satanic at the top. But why should we have any top or bottom in society any more than in the planetary system, in the cosmos, in the finite? Because of human enactments in defiance of all natural law, because of selfishness among those who make civilization what civilization is. We refer to the bulk of those who have time to think and influence enough to embody their thoughts in human enactments.

The clock of time eternal is forever on its onward march. Men shall not always trifle with the destinies of their own race. This earth of ours could hardly be built up for the mere purpose of remaining a colossal insane asylum for ever, as it has been so far, or, until all at once, as if by magic, it becomes just the opposite. Nature does not rest on any such wild, disorderly processes. All that would be a combination of deformities and caprices on a gigantic scale, worthy of the barbaric imagination of theologians. Science and human observation repudiate all that. The cosmos is a constant exhibition of organized beauty, with its successive waves of glory, with its melodies and rhymes, never disconnected from cause and effect, never resting on caprices or whims.

Judging from all that man has done or attempted to do through our long centuries of riots and heroisms, of selfishness and self-denial, of perversity and nobility, judging by all that, man is a mixture of the angel

and the demon. From that there springs up two philosophies of human growth. They are as follows: That of the top men bent upon humbugging the rest. "The demon shall forever crush the angel." That of plain men, with faith in God and humanity. "The angel can crush the demon, because all the forces of the universe are adapted to that."

The latter philosophy is endorsed by science. The power of environment in the growth of all living organisms is the most emphatic repudiation of that philosophy of despair with which we have been fed through all our educational methods, religious and secular, as the most convenient to quiet our conscience and relieve us from all responsibilities in the building up of our own manhood. It is a philosophy of cowards or reprobates, choose whichever you like.

The philosophy in question has no room for the higher duties of moral and ethical law to be applied to natural life; no room for a science of social development respecting natural laws, and giving to all men their natural rights. That philosophy is admirably adapted to simply develop the demon among some men, and the simplicity of the idiot with most of the rest. No wonder that humanity has so far been like a sickly colony of men living in vast swamps, rejecting all conceptions about a science of drainage, expecting that later on God shall transform such swamps into healthy hills and valleys, all at once, as a divine freak!

The moral swamps of nations are and have always been the economic and political monopolies with which we force all men to live unnatural lives, leaving just as few chances as possible for the development of the angel in men. Nature establishes a healthy struggle for an upward march of the whole race, uniform, symmetric, but we, fools that we are, establish a mere animal struggle to see who shall get on the top of somebody else.

Through economic monopolies we give to some the power to appropriate most of the natural resources which constitute the inheritance of men, for all to have and freely enjoy.

Through political monopolies we again give to the few what belongs to all—the law making power. That is used by the few to perpetuate and intensify "all economic monopolies."

There we have the two points of attack against which the armies of the people should peacefully march through the ballot box, thus establishing a normal social environment for the development of the angel in men, since the whole universe is a constant struggle for the evolution and perpetuation of beauty. Hence the need of the higher duties.

### OCEAN STEAMSHIP CHANGES OF TWENTY YEARS.

In 1888 the Inman Line brought out the City of New York and her sister ship, the City of Paris. As afterward appeared, these ships were a considerable advance on anything which had previously been constructed; some trouble was had with their machinery, but nothing serious occurred until that terrible mishap which befell the City of Paris, and which nearly destroyed both her engines, the ship escaping by what seemed at the time to be almost a miracle, her machinery was, however, finally replaced and improved, since which time both ships have made fine passages, and are considered as second only to-day in speed, and equal to any in accommodations and safety, so far as that factor can be measured. Since these ships were launched, by a special act of Congress they have been taken into the hands of American owners, and are now sailing under the American flag; under the names of "Paris;" "New York." They are 560 feet long, 63 feet beam, 43 feet deep, and their tonnage is 10,500, their engines are 45" high, 71" intermediate, and 113" low, by 5 feet stroke, carrying a pressure of 150 pounds of steam, having twin screws and two sets of engines, which make from 72 to 75 revolutions when running at full speed, and indicate from 19,200 horsepower to 18,600 or 19,800.

These ships made a record of 5 days and 18 or 20 hours; and on their first trip they made an average of 19 knots.

In 1889 the White Star Co. brought out the "Teutonic" and "Majestic;" these ships are still larger than the Paris and New York, and were another advance, and they are certainly among the finest ships now afloat; they are 582 feet long, 57 feet 6" beam, 39 feet 4" deep; their tonnage is 9,685 and they are fitted up with twin screws, triple expansion engines; 43" high, 68" intermediate, 110" low, by 5 feet stroke. The screws were 21 feet 6" in diameter, 28 feet 6" pitch. The center of her screw shafts were 16 feet apart so that the screws really overlap each other in their action on the water by 5 feet 6". Her working pressure is 180 pounds and their passages were more hotly contested with the Paris and New York; after their appearance running regularly, a great deal of rivalry existed and the four ships made frequent passages where the difference in time, all things being considered, when favorable runs were assured, made anywhere from 18 to 31 minutes in the 2,800 or 2,900 miles.

The precise records of the four boats are not at the moment at the writer's hand, but they ran down the record from 5 days and 20 hours to nearly 5 days and a half. Later the Cunard Line brought out the Campania and the Lucania, which are still larger than the Teutonic and Majestic, being 622 feet long, 65-foot beam, and 41 feet 6" deep, with a tonnage of 12,950, and a draft of 27 feet. She had two high pressure cylinders 37", one intermediate 79", and two low of 98", with a stroke of 69" on each engine. With twin screws indicating between 29,000 and 30,000 horse power when at full speed and full power; these ships have very recently cut down the time to 5½ days making an average of 22 knots per hour nearly, for the whole distance. In this somewhat brief way the history has been outlined only, of one of the noblest achievements of engineering which has ever occurred; reducing the steamship time from Liverpool to New York, from 11 or 12 days in 1869 to 5 days and 9 or 10 hours in 1894 has no tinge of romance in it, it has been a business operation. The daily run of a ship in 1869 was from 250 miles upwards and a return trip the writer made in that same year in 9 days and 14 hours was considered very fast, but the last trip in 1894 inside of 5 days and 12 hours, is now considered only as showing what the near future may have in store. In 1869 the fastest time was 230 hours for one way. In 1894 fast time is 131 hours; and two ships are now building one of which proposes to make the trip in 108 hours from Queens-town to Sandy Hook, and we suppose that the builders are anticipating doing better even than that. One of these ships will cost three and one-half millions and the other four millions of dollars. One is supposed to have 42,000 horse power, the other one upwards of 35,000 horse power. The speed at which these ships are driven can be easily computed by remembering that a nautical mile is 1.1515 statute miles; so that 20 knots becomes 23.03 miles, 21 knots becomes 24.182 miles, 22 knots becomes 25.333 miles, 23 knots is 26.484 miles, and 24 knots 27.636 miles, the railroad man can readily understand what this means. The propeller power of the Campania is equal to 35 or 40 of the best locomotives in power, while her carrying capacity if she were loaded with wheat would take several train loads of that substance; besides carrying her coal and her crew she takes nearly 2,000 passengers, and when in deep water makes from 22 to 23 knots every hour for 5½ days. The coal required for these various ships varies considerably, some of them running considerably over four hundred tons in 24 hours, that depending upon the speed at which they are driven.

The Campania and the Lucania are 70 feet shorter than the Great Eastern, their tonnage is nearly 6,000 less, their draft is 3 feet less, and their passenger capacity is not quite half of what the Great Eastern's was. The Campania's horsepower is  $3\frac{1}{2}$  times as much as the Great Eastern contained, and she only made 14 or  $14\frac{1}{2}$  knots per hour with 8,000 horse power. The Campania uses a little more than the same amount of fuel that the Great Eastern did. There is much more with reference to these ships that would be interesting without doubt and whatever the future may contain for us, these enormous structures pass across the ocean with much more regularity than some express trains making  $\frac{1}{2}$  of the distance, they are exceedingly comfortable, and show what may be accomplished by persistent effort; it might be interesting to make some comparison between them and the locomotive, but the main object of this article has been to encourage thinking in relation to locomotive engine, and see whether modifications could not be made which would bring about some similar if not as marked changes and improvements.

No comparison has been made with the new U. S. cruisers or battle ships which have lately been tested and have shown such speed, for the test which is made with them is only for four hours. They are run by the men who build them, and can never be run at the same speed again by any one else without long familiarity with the machinery, while the liners of which we have here written make this terrible speed for days at a time and ordinarily without the slightest break or mishap, and after a few miles outside Sandy Hook until they are within a few miles of Queenstown, and instead of running 80 or 90 miles they run 2,800 or 2,900 when they do not encounter ice or fogs, or when for some other cause they do not have to slow up and run carefully.

These ships are constructed with a healthy regard for economy and their work is regular, while the war ship at its highest speed is not considered or counted for economy, and some of our new ships have a speed of 20 knots or greater while they are really run at a speed of 12 or 14 knots while cruising, it being more economical to run them at that speed, but in case of an emergency they have the power, and can get into or out of trouble at a very high rate of speed.

This then draws the line between the ocean ships and the naval vessels, of whatever class they may be, the naval vessels are built for fighting and rarely require their maximum power, the liners are elegant floating hotels, in which it is for the interest of the owners to get rid of their passengers as soon as it is possible, as every

day feeding and lodging cost a large amount of money, hence a few hours taken from the passage means a good many dollars in food saved, and other creature comforts, as well as coal. The passages of the ships are regular, while a war ship may lie in dock or at anchorage for months, and then suddenly have to go the very other side of the world on short notice, having no designated route; or, as a railroad man would say, one is a "fast express" and the other is a "wild flyer."

The engineering achievements are worthy of the highest commendation, the effect in the different lines will be vast, and whatever the improvements that are possible, it will all tend to a higher civilization, more comfort, and so far as we know, progress.

The record as it now stands, or the latest trips reported as "breaks" are as follows:

Paris, Southampton to New York, June, '93, 6d 9hrs 37 minutes.

New York, Aug. 25th, '94, Southampton to New York, 6d 8hrs 38 minutes, fastest on record.

Campania, Queenstown to N. Y., Aug. 18th, '94, 5d 9hrs 29 minutes. 2783 knots, 21.49 knots per hour for the whole time, average 515.8 knots per 24 hours.

Lucania, Queenstown to N. Y., Nov. 4th, '93. 5d 12hrs 47 minutes.

The Teutonic and Majestic are a few minutes behind the Paris and New York on the same runs, 18 minutes in one case and 37 or 38 minutes in another.

On Aug. 31st '94 the fastest passage ever made between Queenstown and New York was finished by the "Lucania"—time 5 days 8 hours and 38 minutes; this is fifty-one minutes faster than before, almost at the same moment, actual time the Campania, had finished up the fastest eastern passage ever made, on her run from New York to Queenstown, time 5 days 10 hours and 47 minutes, being 73 minutes ahead of time, or an hour and thirteen minutes better than previous record, the passage of the Campania was at the rate of 21.41 knots an hour for the whole distance, or 2,814 knots, from the bar outside of Sandy Hook to Daunt's Rock off Queenstown, the Lucania ran 2,787 knots on her way and at the rate of 21.65 knots an hour from Daunt's Rock to Sandy Hook Bar—the daily average of Lucania was 535 knots, Campania ran into fog and lost nearly 135 miles in time, or her record would be much lower than now recorded.

\* \* \* \* \*

In my article in September on page 855 on the last paragraph a very serious mistake has been made, who is responsible for it is immaterial, in speaking of the horse power of the Umbria and Etruria, it is put down as 1,440 and 1,460 respectively, it

should be 14,840 and 14,460 respectively, these amounts are precise. On the next page and in the same paragraph speaking of the three German ships, the Aller, Saale, and Trave, in the 16th line from the top of page 856 it does read indicates 3,800 horse power, this should read 8,300 horse power.

Thomas Pray, Jr.

#### NOTES.

The following item appeared in the *Railway Age*, issue of August 24th: A Minneapolis dispatch says: "Commencing next Monday all firemen on the 'Soo' railroad will be in the employ of the engineers of the road instead of the company, as has always been the case up to this time. The object sought to be obtained by this course is to improve the personnel of firemen, to rid the service of any jealousies that have existed, to make every engineer interested in securing the best possible class of men for firemen, and to make firemen loyal and efficient, for the reason their employment and promotion depends on the recommendation of the men for whom they are firing." If there is any truth in this item, it can be asserted with certainty that it is one of the queerest methods on record for improving the "personnel of firemen," and ridding the service of "jealousies." I can conceive of no plan which is better calculated to defeat the avowed object in view than the one proposed. To place a fireman in a position where he is absolutely dependent on the engineer for his job, instead of on the company that pays him his wages, looks to me like taking a long step backward. What standard shall the engineers establish by which to determine when they are getting "the best possible class of men for firemen?" Will it be one established by each one's individual will or ideas of the fitness of things? Evidently so, since the employment and promotion of the firemen "depends on the recommendation of the men for whom they are firing." What sort of a hand will be dealt out to the company after a shuffle of that description? A mighty poor one, I'll warrant. And how shall the firemen's organization on the "Soo" road proceed to protect its members, in their rights to runs, etc., under a regime of that sort? Will it make contracts with the engineers individually or collectively, and if so, how will it proceed to enforce them? But, perhaps, there won't be any firemen's organization on the "Soo" road after this plan has been for a short time in force. Who knows? I hope this item is a product of the fertile imagination of some newspaper reporter.

If such a plan as this should come to be generally adopted it might be an excellent thing for unprincipled engineers, in a pe-

cuniary way. Some months ago *Locomotive Engineering* published a letter which had been written to Editor Hill, asking his assistance to get the writer a job of firing somewhere in the country; and the writer naively intimated that he would be willing to pay Mr. Hill \$50 for his services in the matter providing the desired situation was secured. There are plenty of men in this country who are in the same position with this individual, willing to pay \$25 or \$50 for a job, the several railroad employment agencies are making a good profit out of them; and they would be a snap for many of those engineers who had full control of the employment of their firemen, and who were not particular about what methods they took for making a little pocket money "on the side." Of course, the companies would institute safeguards against that sort of thing, but we have safeguards against legislative bribery, haven't we? And, whatever the safeguards, it seems quite certain that improvement of "the personnel of firemen" would not always be kept in view.

The latest argument in favor of the automatic coupler is rather an odd one, but, if accepted, it is likely to carry more weight than all those that have gone before. It is that the automatic coupler is an aid to the railroads in times of strike, by enabling them to fill the places of striking switchmen more easily. "Inspector," in the *Railway Age*, presents an extract from a letter written shortly after the recent strike, by "the general manager of one of the largest railway systems in the world," and he says that the argument contained therein "has force." The quoted matter is as follows: "It seems to me the experience of the last few weeks ought to be a sufficient object lesson to railroad managers to prompt them to equip their freight cars with automatic couplers. The very reason switchmen are opposed to automatic couplers, as is well known, is because it renders their business less hazardous and their places could be more readily filled by green hands. We found it easy enough to get green men to take places as brakemen or firemen, but few new men care to do switching. The action of switchmen in the late strike surely ought to spur managers up to equipping freight cars all over the country with the automatic M. C. B. coupler." It will be a surprise to many railroad men to learn that it is "well known" that switchmen are opposed to the automatic coupler because it renders their occupation "less hazardous," and if it is a fact it furnishes a strange commentary on the justice of an industrial system whose tendency is to lead men to prefer a more hazardous employment to a less. But why should there be any argument in this? What power have the small number

of switchmen in the country to coerce railway companies into continuing to use the more hazardous method of coupling cars against their will? If the railroads should set to work to equip their cars with the automatic coupler, simply because it was "less hazardous," and more in the interests of human life, how should the switchmen go to work to prevent them? Seeing that there is a law requiring railway companies to do this very thing within a specified time, it looks as though they have overrated the power of opposition of the switchmen. But if the argument takes hold it will have one good effect. It will spur the companies up to the work of equipment so that none of them will be coming forward with a plea for an extension of time at the expiration of the limit set by law. The motive of self interest is the only one that induces corporations to respect the law, after all.

\* \* \*

How these general managers do contradict themselves! Here is one of them, "the general manager of one of the largest railway systems in the world," declaring that he found no difficulty in hiring all the green men necessary to fill all branches of the service, except that of switching, and that difficulty would have disappeared if they had only had automatic couplers; and the General Manager's Association has been telling the country that it was literally swamped with experienced and first-class men for all branches of the service. The organ of the General Manager's Association, the *Railway Age*, has stated that less than one per cent. of the men hired were found to be inefficient, "the inefficiency being in almost every case owing to the fact that they were foreigners." Outside of this one per cent. the men were declared to be without exception "first-class men." And observe that none were declared incompetent; simply "inefficient."

And, so far as my knowledge goes, and I am not one of the "green hands," the statement that switchmen are opposed to automatic couplers, either because they are "less hazardous" or for any other reason, is absolutely false. It may be true that with automatic couplers in general use the railroads would have less difficulty in filling the places of striking switchmen with "green hands," but it is not true that switchmen are opposed to automatic couplers. I have heard switchmen oppose some particular form of automatic coupler, or express preference for one style more than another, and condemn the want of uniformity in the styles in use. I have heard them say that they would prefer the old link and pin to being compelled to work with such a mixed up museum of curiosities as has been floated around the country in

the name of automatic couplers in the past few years, and I have said it myself, but I never yet heard a switchman express a wish to see the old hand system of coupling cars be retained in preference to a uniform and complete system of automatic couplers; and it is quite certain that the switchmen's organization worked as hard for the passage of the car coupler law as did any of the other railway organizations. There is plenty of food for thought, however, in the idea at the bottom of this general manager's expression of opinion, for it is nothing more. The tendency of the times is to deprive workmen of the material benefits flowing naturally from the use of improved machinery and more efficient industrial processes. Why should switchmen be opposed to automatic couplers? because they render their occupation "less hazardous," and thus widen the field of competition for their places in the industrial world, and lower their wages. Thus the benefits flowing from the use of the improved machinery will go, not to the switchmen, but to the railroads; they will save enough on the item of wages to pay the increased cost of the couplers, and make a profit besides. And this principle holds true in every branch of modern production. Queer, isn't it?

W. P. Borland.

#### Steam Economy.

MR. EDITOR:—Under the caption of "Economy" in the July number of your *MAGAZINE*, one becomes thunderstruck with the Miltonic grandeur of the language the writer uses, terms that are almost bewildering. "Multiplied Cylinders and Expansions," "Marine Engines" and "Ocean Greyhounds," as though Titan like to reach the very skies of mechanical literature. But he takes an Icarian fall in the last paragraph when he undertakes to demonstrate that clearance is merely the distance from piston to cylinder head, engine on center, and that clearance space is compression "space," and has nothing in common with economy.

It becomes evident that Mr. Weiler, like the rest of us, can learn something in regard to the economical use of steam. Mr. Weiler has utterly ignored the assertion in my first article in which I said that the indicator proved that reducing the clearance in an engine increased the economy. Does Mr. Weiler consider that every time the exhaust port opens that the clearance space, not compression space, is cleared of all the steam to the valve face, and that the space from the piston to the valve face is filled each stroke with steam that is thrown away pure and simple, consequently the greater the clearance space the more uneconomical the engine. I have some indicator cards

from a double valve long ported engine which show no leaks at all, neither in the valves or piston, and cut off as near right as it would be possible to adjust valves; yet it is utterly impossible to get the initial pressure within two-thirds of boiler pressure. Why? Improperly designed steam ports and valves. Too much space to be filled with steam, not compression space either. It was upon the idea of reducing this space that George H. Corliss brought out his automatic cut-off and reduces the clearance to the minimum by placing the valves on the extreme ends of the cylinder, doing away with the long passages and reducing the clearance to the smallest possible amount and increasing the economy of the engine. Now, if this is compression space, why does reducing it economize in coal consumption? Bro. Weiler says Bro. Garaghty is sustained by all books. What books? What authority upon mechanical engineering has ever given such a definition of clearance? And, furthermore, I can find in no work upon mechanics or engine designing any such a term as compression space. In F. F. Hemenway's "Indicator Practice and Steam Engine Economy," I use Mr. Hemenway more particularly, as he is not only the best of authority, but his is about the only work treating upon locomotive indicating thoroughly. Chapter two we find among others, the following definitions: "Clearance is the space between the piston at the end of its stroke and the valve face. It is usually reckoned in per cent. of the piston displacement, or in its equivalent in length added to the cylinder. Compression is the action of the piston in compressing the steam remaining in the cylinder at exhaust-closure into the clearance space."

Now, Mr. Editor, to clinch my definition of clearance I will give Prof. John E. Sweet's plan for measuring same: The following remarkably simple plan for determining clearance was communicated to the *American Machinist* by Prof. John E. Sweet. He says: "See that the piston and valves are made tight and the valves disconnected; arrange to fill the clearance space with water through the indicator holes, or through holes drilled for the purpose. Turn the engine on the dead center, make marks on the cross-head and guides; weigh a pail of water, and from it fill the clearance space. Weigh the remaining water so as to determine how much is used. Then weigh out exactly the same amount of water as is used, turn the engine off the center, pour in the second charge of water and turn the engine back till the water comes to the same point that it did in the first instance. Make another mark on the cross-head and guide, and the distance between these marks is exactly what you really wish to know; that is, it is just what piston travel

equals the clearance. . . . If it takes one pound of water to fill this space and to admit another pound, the piston must be moved one inch; then the clearance bears the same relation to the capacity of the cylinder as one inch bears to the stroke of the piston. Thus under these circumstances, in an engine of ten inches stroke, it would be said to have ten per cent. clearance."

It may be added that, considering the length of the indicator diagram as representing the stroke of the piston drawn to a scale, it is only necessary to lay off this one inch, or whatever the distance may be, on the same scale to establish the clearance line on the diagram. The two from which the above articles are quoted are mechanical authorities from which there is no appeal. I am much obliged to Mr. Weiler for the information in regard to the adjusting of rods. In eighteen years experience with engines of nearly all kinds and classes, from the locomotive up to the compound condensing, I had never dreamed that rods were readjusted, or that if the piston did not clear the cylinder head something would become disemboweled.

In my next I shall take up some more of Mr. Garaghty's answers.

Arthur L. Parshall.

ALBUQUERQUE, New Mexico.

#### The Engineer's Brake Valve.

MR. EDITOR:—There have been several cases that came under our notice recently where the preliminary exhaust port in the engineer's brake valve has been made larger so as to obtain a quicker action of the brakes during a service application, and it is our object in this letter to show that the above method should not be tolerated by any means, as the brake valve has distinct features governing its action, founded by men of experience years ago. To make a service application we first reduce a portion of air from chamber D through the preliminary exhaust port. To this chamber the equalizing reservoir is connected to increase the air capacity of the former. But before this equalizing reservoir was connected it was difficult to make an application light enough, as the equalizing piston would raise and the train pipe pressure would exhaust itself, causing an emergency application of brakes, when only a service application was desired. But by connecting the equalizing reservoir to chamber D gives us a greater air capacity to discharge from, which in return we can get any desired application of brakes.

The equalizing discharge valve has distinct features governing its action, the exhaust port which is in proportion to the train pipe so as to render efficient service with either a long or short train, and the equalizing piston which will not close the

port until the pressure in the train pipe as become equalized, and the preliminary exhaust port is in proportion to chamber so as to render all variation for service ops.

It may also be stated that the present size of the preliminary exhaust port is also in proportion to the graduating valve's action in auxiliary reservoir pressure, as the graduating valve is the valve for admitting or gradually from auxiliary reservoir to take cylinder and whatever reduction is made through the preliminary exhaust port in the service position. The graduating valve can keep pace with it in reducing auxiliary reservoir pressure. Then if we enlarge the preliminary exhaust port in order to obtain a quicker application for service stops, we would reduce the pressure so much in train pipe in advance of the graduating valve's action on auxiliary reservoir pressure, which would leave a greater pressure in auxiliary reservoir, and as the triple valve would be already in the position for graduation, there should be no difference between train pipe pressure and auxiliary pressure.

Returning to the equalizing discharge port it is also proportioned to render efficient service with either long or short trains. As it is proportioned to meet the requirements of the long train (fifty cars) certainly will render efficient service for the short train, as there is no objection to the brake being applied in a shorter time, as the shorter train getting the benefit. It is to prevent an emergency application of brakes with the short train, when only service application is desired, we come in contact with the graduating springs in the triple and the tension or resistance of these springs will render a full opening of the equalizing discharge port, with service making irrespective of any number of cars. So it can be seen that the ports in the engineer's brake valve are in proportion to each other, and should the valve become too slow in action for service applications, it will be and upon examination that the valve is faulty and the piston will not respond to slight reductions owing to it being gummed up by oil, or the piston packing is too tight and not from the size of its ports.

Walter C. Garaghty.

BALTIMORE, MD.

#### Water Flashing Into Steam.

In the course of a discussion at the Southern and Southwestern Railway Club on "Fusible Plugs for Fireboxes," Mr. R. P. C. Anderson, of the Norfolk & Western, mentioned a fact in connection with the law which keeps water liquid under certain pressures, which has very rarely been seen in practice. It is well known, for instance, that while water turns into steam at a tem-

perature of 212 degrees under atmospheric pressure, it will stand a temperature of 350 degrees before turning into steam when the pressure is 120 pounds to the square inch. These figures are a matter of calculation, and are rarely seen in operation except in laboratory experiments. In the remarks made by Mr. Sanderson he said: "I never appreciated the fact as to water flashing into steam until I watched it, when trying to wash the grease off engines with hot water, and found we had nothing but steam a few inches from the nozzle, and we had to get pressure down below 100 pounds before there was any hot water when the jet struck the grease."

In connection with this engineers understand how much more disastrous a boiler explosion is when a large quantity of water has been in the boiler than where the boiler supply was short. Those who have given the subject most attention are well aware that a boiler carrying a large volume of water is much more liable to disaster, in case of anything happening, to suddenly reduce the pressure on the boiler, such as the fracture of a sheet or the sudden opening of a very large safety-valve. When the sudden reduction of pressure takes place the water flashes into steam, and there have no doubt been many cases where this has caused violent boiler explosions.—*Locomotive Engineering.*

#### Renewing Steel Rails.

Mr. E. W. McKenna, formerly assistant general superintendent of the Chicago, Milwaukee & St. Paul and recently appointed general superintendent on the Great Northern, has recently been granted a patent for renewing old steel rails. The patent describes the process as consisting in heating the old rails to a temperature near to but below the point at which the carbon contained therein would be affected, and simultaneously straightening and reducing the cross section equally in all directions except in height. The result is a rail of slightly less width, but of the same height and the same or greater length. A detailed analysis of the chemical and physical results obtained has been made under the direction of Messrs. J. N. Barr and George Gibbs of the Milwaukee road, demonstrating that the chemical characteristics remain unchanged and the physical properties remain the same or are improved. The patent is said to be a fundamental one, and is of especial value in view of the practice of removing rails where the flowage of metal at the ends has become so great as to occasion uneven joints. The following figures are given as showing the relative values of so-called worn-out rails by each of the three different methods of disposal: As scrap, \$10 per ton; by sawing off the ends, \$14.43;

by renewing as above, \$19.71. It is claimed that 96 per cent. of the rail is restored to its usefulness by this process, while by sawing, about 30 per cent. is lost.

Tests of the invention have been made at the works of the East Chicago Iron & Steel Company, but it is proposed shortly to organize a company to carry on the work.—*Railway Age*.

#### Coming Flying Machines.

The pioneer machine will, in all probability, be a large kite-like affair, with power in the shape of a gasoline motor and screw propeller. It will be provided with a means of guiding both up and down, and sidewise. It will carry but one operator, who must feel that the machine is almost part of himself. Its speed will be small, probably from 15 to 25 miles per hour, and its cost need not be more than that of a small steam launch, while its greater speed and ability to go anywhere will commend it to enthusiastic athletes everywhere.

The art of balancing once learned, and fear allayed by usage, improvements will follow. Increased experience and our superior intelligence will enable us to surpass the birds in their own element. Professor Langley thinks 90 or 100 miles per hour not improbable. The increased skill due to a regular use would probably enable a flyer to manage a machine without the aid of a motor or, at most, with such assistance as his own muscles afford.

Such a machine need not cost greatly more than a first-class cycle. Busy New Yorkers could spend their nights in the Catskill's and their holidays in the White mountains. Pleasure seekers would find it the most agreeable method of travel. Its high speed, its universal application, its freedom from the common causes of accident, such as snags, washouts, broken rails, burnt bridges and collisions, and its cleanliness would combine to make it a popular means of transit. Fifteen years mark the history of the bicycle as it grew from an athlete's means of amusement to the busy man's vehicle. Half that time has seen the electric street car displace the horse. Is it unreasonable to think that before many years the flying machine will have placed itself by their side as a means of transit?—*Cassier's Magazine*.

The employees of the Denver, Leadville & Gunnison road have wisely agreed to accept the reduced wages which Receiver Trumbull offered, the employees having failed to secure the support of the court to their position, that as this road was previously operated as a branch of the Union Pacific and as another federal court had enjoined the receiver of that company from reducing wages, therefore the same wages must be main-

tained on the separated road. To this evidently untenable argument, Judge Hallett replied: "The inquiry at the court in Omaha was not directed to any particular branch of the road, but it was directed to the whole Union Pacific system. The judges there said that if the road was not paying operating expenses it should be cast off, referring particularly to the South Park branch. This was in effect done, and the receivers were directed to stop the operation of the road. They were not allowed to continue its operation for the reason that it could not pay expenses. It is clear that this decision there made is not binding on the present condition of things. It became a question whether under a different management the road could be made to pay expenses. This must either be done or the road stopped and everyone dismissed. It is not a question of a road earning large sums of money during prosperous times and then reducing during a depression. The courts have held that where large sums of money have been made in prosperous times this money shall be used to pay wages during a depression. I think that the receiver should be allowed to make the reduction and see if the road can be made to pay operating expenses. If he can do more than this, the men ought to be paid a fair compensation."—*Railway Age*.

The Russian government proposes to introduce on their state railways a tariff based on the Hungarian zone system. In Russia it is the long distances which make the cost of railway traveling keenly felt. In order to travel 1,000 versts (663 miles) by third-class a fare of 14.40 roubles (45s 8d), together with the government tax, has to be paid. Only 25 per cent. of the third-class passengers now travel distances exceeding 100 versts, indicating that the majority of the lower classes cannot afford to pay more than 1½ roubles (4s 9d). It is believed that for the first few years of the operation of the new tariff the companies will suffer loss, by reason of the reduction, but in the opinion of the authorities the losses are only likely to be temporary, and the cheap tickets will increase the number of passengers.—*Railway Age*.

#### A Few Yards of Red Tape.

The whole general official force of a well known road were out on a tour of inspection. At each division they would pick up the division officers, and take them over their own part of the line.

The special was on the siding waiting for No. 6. A section gang were at work nearby, and No. 6 was late.

The crowd stood on the track waiting and talking.

The general manager squinted down the

nain line, and said to the general superintendent, "John, ain't there a low place in he track there?"

John squinted.

"Smith," said he to the division superintendent, "there's a low joint there at that witch."

Smith squinted.

"Hogan," said he to the roadmaster, "there's a bad joint there; better have it fixed."

Hogan squinted.

"Sullivan," said he to the section foreman, "there's a dam bad joint there; raise it up."

Sullivan squinted.

"Jerry," said he to one of his gang, "Phy in the divel don't ye do phwat ye'r ould; go ye now and tamp that low jint."

Jerry squinted—but he got his bar first.

"Moike," said he to the youngest man on the job, "dom youre lazy sowl, do youse come and tamp this toie phwile Oi hould upp the ind."

"Moike" failed to squint.

And, lo, the low "jint" was raised.—*Locomotive Engineering*.

#### Thirty-five Years on One Locomotive.

Engineer Jefferson B. Clark, "Jeff," as the boys call him, recently delivered his engine to the Depew shops of the New York Central to be cut up. The engine—the "150"—was built in 1856 and was named "Burrows," after the well-known division superintendent of the Western division, who has recently retired from service. Mr. Clark took her in 1859 and ran her steadily until now—to be exact, thirty-five years, two months and twenty-five days. Of course the old engine has been rebuilt many times, but she and Uncle "Jeff" stuck together like lovers.

Everybody on the Auburn road between Buffalo and Syracuse knew Clark and his engine.

The officials offered the old-timer another engine on his old run, but he has been laying off since he lost the "150," and must feel something like a widower.

This is the longest case of "keeping his own engine" we have ever heard of.—*Locomotive Engineering*.

Representative Haugen, of Wisconsin, has introduced in congress a resolution looking toward government control of railways. Mr. Haugen says the time is at hand when something must be done with the railway problem. Personally he inclines to the view of A. B. Stickney, of St. Paul, who, in his work on "The Railway Problem," takes an advanced position, considering that he is not a theoretical reformer, though a great practical railway manager. Mr. Haugen believes the transportation business to be public business, and as such the public has

a right and the government has a duty to see that no quarrel between the managers of the roads and their employees is permitted to delay or hinder the road in its public function. His resolution introduced recites the several arguments against the railways as at present managed and makes an argument for an investigation. The resolution also calls upon the committee on inter-state and foreign commerce to investigate upon the advisability of enrollment into the public service all railroad officers and employees in the same manner as officers and enlisted men are now sworn into the military service of the United States.—*Railway Age*.

It is reported that the New York, Susquehanna & Western railroad has adopted a new form of signal, the invention of A. C. Gordon, of Rochester, N. Y. The theory of the system is not only to give the engineer warning of a train ahead, but to indicate to him the time that has elapsed since a given signal was passed. Each train sets the signal so as to display a red half-disc. This half-disc changes for half an hour gradually from red to white and the relative proportions of the two colors displayed show the engineer of the next train the time elapsed between the two trains. The line which separates the white from the red moves like the minute hand of a clock and indicates by its angular position the time elapsed since the last train passed. After half an hour the half-disc is all white, then the engineer knows that he is half an hour or more behind the preceding train. At night the signal is illuminated by the headlight of the locomotive. The successive signals indicate to the engineer of the following train whether he is gaining or losing on the forward train. The half-disc changes to full red each time a train passes.—*Railway Age*.

The last spike was driven on July 30th upon the Tehuantepec National railway, completing Mexico's first transcontinental railway, and the train crossed the Isthmus of Tehuantepec from the Atlantic to the Pacific, a distance of only 192 miles. This long proposed railway is destined to carry an important share of the traffic between the two oceans and will form a serious rival to the Panama railway, which crosses the continent some 1,300 miles farther to the south. The new road, however, has at present to contend with poor harbor facilities, particularly at its Pacific coast terminus at Salina Cruz, and much money will have to be spent to put it in condition for active competition with existing routes between the great oceans. The completion of the Tehuantepec railway, however, is one of the most important events of the year, and it is due to American engineers and American builders.—*Railway Age*.

## WOMAN'S DEPARTMENT.

EDITED BY IDA A. HARPER..

Letters for publication should be directed to Mrs. Ida A. Harper, Stanford University, California.

### FROM OCEAN SHORE TO MOUNTAIN SUMMIT.

The witty traveler who said that in one day in California you could freeze through and thaw out did not greatly exaggerate. I can testify by experience, that in an hour and a-half one can go from the sea coast with the thermometer at 65° to the interior of a valley where it stands at 100°. You have only to decide what temperature you prefer and you can have it by the expenditure of a dollar or two. After leaving Catalina Island we returned to Pasadena to finish that part of our programme which had been interrupted by the "strike." If one wishes to realize fully the possibilities of California soil and climate he has a fine opportunity here. Ten years ago it was a desert, five years ago a village and to day a beautiful little city of 8,000 inhabitants, exclusive of tourists, with whom in the winter season it overflows. It is a city of beautiful homes. You do not have to wait a lifetime to see your trees and shrubbery grow to maturity. The eucalyptus, of which there are 140 varieties, grows ten feet in a year. In a very few years a rose slip will cover the house and bear thousands and tens of thousands of blossoms. In five years, with ordinary attention and plenty of water, you may have an avenue of large pepper and magnolia trees, a garden, as lovely as a dream, of roses, lilies and every plant that blooms, masses of climbing vines and an orchard of oranges, lemons, walnuts, figs, olives, etc., and all this will be as beautiful in the winter as in the summer. No words can describe the flowers of California. Everything is a wilderness of bloom. There are hedges of calla lilies and geraniums; the fuschias and heliotrope climb to the second story windows and are loaded with blossoms; the nasturtiums run riot over the fences and up the chimneys; the morning glories will cover a whole house, if they are permitted, and they do not close during the day, as they do further east. All of these are seen at their best in Pasadena. One of the handsomest homes is that of Governor Markham. Another is that of Prof. Lowe. He organized and managed the balloon service during the civil war, and is the inventor of water gas and artificial ice. He also built the Mt. Lowe Railway, which is one of the wonders of the age. No visit to Southern California would be complete without a trip to Echo Mountain. A charming ride through the

valley brings us to the foot of the mountain, and an electric railway, with an incline of 8½ feet to the mile, carries us up through the canyon, skirting the sides of the mountain and looking down into deep chasms. At a height of 2,200 feet we come to the Rubio Pavilion, a hotel built in one of the most romantic spots in the world, in a mountain gorge, among rocks and waterfalls and overhanging trees. But the most wonderful part is yet to come. Before us is an almost perpendicular incline of 1,300 feet to the top of the mountain, and up here we are going in a cable car. It is the steepest railroad in the world, a rise of 62 feet in every 100. At one point a trestle is built over a gorge; it is 200 feet long, and the upper end is 100 feet higher than the lower end. The road is operated from the power house at the top of the mountain, and so perfect is its construction, so great the precautions, that we take our seats in the car and ascend without a tremor. At the summit is a large and beautiful hotel, with broad verandas commanding a view that cannot be excelled on the continent. We are fifteen times higher than the Ferris wheel at the World's Fair.

We were there during full moon, and to the end of life shall I remember the evenings on those overhanging verandas. Every electric light was plainly visible in Los Angeles, nearly twenty miles away, while those of Pasadena lay at our feet like a great constellation, stretching into the distance on every side were lofty mountains, while afar off a silver sheen marked the Pacific Ocean. Through a fine telescope we viewed the planets. Saturn, with his fiery rings, the Mountains of the Moon, a rare and glorious spectacle. One morning I looked upon the scene by sunrise, as it came up out of the mists like a great enchanted picture, the air so clear that Catalina Island, sixty-five miles away, is plainly visible, and all the beauties of the splendid San Gabriel valley enhanced by the flood of golden sunlight. Many hundred feet up the mountain side, Professor Swift, late of the Rochester Observatory, is building a new observatory, from which much is expected by the scientific world. Space forbids a further description of the magnificent features which cannot fail to render this one of the famous resorts of the world when it shall have been fully completed.

SANTA MONICA.

One of the unfortunate requirements of travelling for the purpose of sight seeing is that one must be continually "moving on." If one has a fixed amount of time to see a certain number of places, he must follow the programme. No sooner does he get unpacked, comfortably settled, and somewhat acquainted with his fellow travellers

than the schedule announces that the time is up and he must obey the cry of "all aboard."

The sight of Santa Monica was formerly the rancho of United States Senator Jones, of Nevada. It is still his home, although he represents the state of Nevada in the senate, or, to put it more exactly, he represents his silver mines, just as other men represent their coal mines or their sugar plantations. In laying out the town he reserved a section of five acres where he built a magnificent home, surrounded by beautiful gardens. He has obeyed the scriptural injunction to care for those of his own household, and has provided well for all his kindred. He is spoken of as a kind and charitable man and held in high esteem at Santa Monica. The town extends for a mile or more along the high bluffs overlooking the Pacific ocean and contains many lovely homes. The beach is said to be the finest on the coast, and people come from all parts of the state to enjoy the bathing. Thousands of people go into the surf every day, and the large interior "plunges" are filled with a merry crowd. An hour in the great breakers is the most exhilarating sport in the world. We stayed three weeks here instead of two, as we intended, because of the excellent bathing facilities. The long beach affords an endless and interesting panorama. The crowds of people lounging on the white sand, the groups of children playing at the water's edge, the bathers performing their varied antics, the burros trotting by with their jolly riders, all forms an inspiring scene and one that does not grow tiresome.

There are many delightful drives up the long canyons. I was particularly struck with an incident that came under my notice. Through one canyon flowed a clear, cold stream of mountain water, an invaluable blessing in this arid region. A number of little homes were built here, dependent upon their large gardens. Suddenly the stream disappeared and only the dry, rocky bed remained. An investigation showed that the source of the stream in the mountains had been purchased by a party of capitalists who had turned it from its original direction and carried it, by aqueducts, to their own property. Every drop of water in California must be paid for. The government sells the "water rights" in the mountains at a fixed price, but the purchaser is placed under bonds to do a certain amount of work in the way of aqueducts, flumes, reservoirs, &c. Then any one who can pay for it is entitled to have the water carried to his place and guaranteed so many hours' supply each day. While this may seem an injustice to those through whose land the streams originally ran, yet without this provision the state never could

have been developed. There would have been no land cultivated except those few scattering tracts through which these streams ran, and even they would have been dried up in mid-summer. Capital came in, built the great reservoirs where the winter rains are stored, the hundreds of miles of flumes, going over the southern part of the state like a network, expended millions of dollars. Now the man of small means can take up a tract of land in the middle of the desert, arrange for his water supply, and in a few years his desert will bloom like Paradise. There is one axiom that must not be lost sight of, namely, that we must consider "the greatest good to the greatest number." In order to obtain this it is often necessary that one man or one woman must suffer, or that some small portion of the community must be inconvenienced, but this is unavoidable. We must get away from the habit of looking at things from a purely selfish standpoint.

After leaving Santa Monica we returned again to Los Angeles for a brief visit to a family for many years residents of Indianapolis and closely connected with the history of Indiana, that of Mr. John Harrison, a cousin of ex-President Harrison. His wife was a Miss McCarty, whose father was one of the founders of Indianapolis, and left an estate which is said to be one of the most valuable in Indiana. A few years ago they purchased an elegant home in Los Angeles and decided to spend the remainder of their lives in this almost perfect climate. Their house is filled with interesting reminders of the historic past, in which the grandfather, President William Henry Harrison, played a prominent part; and sitting upon the broad veranda, surrounded by palms and roses and a wealth of beautiful flowers, I enjoyed to the fullest the reminiscences of those pioneer days so far removed from the comfort and luxuriance of the present. In driving about the city I was again impressed with the beauty and desirability of Los Angeles. It contains thousands of splendid homes, surrounded by such tropical loveliness as exists only in California, and is especially enjoyable as it possesses the advantages of a city. The climate is very fine and it is less than an hour's ride from both sea side or mountain resorts.

#### SANTA BARBARA.

A five hours' ride by rail brings us to Santa Barbara, where I write this letter. It is one of the oldest towns in the state, if we may apply the term "age" to any place in what forty years ago was almost an unknown country. The development of California is a story far beyond the riotous imagination of a Rider Haggard or a Robert Louis Stevenson. The first impression of

the town is not entirely favorable. Many of the buildings are old and there is a general uncared-for appearance about many localities, but a closer acquaintance makes it easily apparent why it has so favorable a reputation. The town lies between the mountains and the sea and so peculiarly sheltered as to possess the warmest winter climate along the coast. It is, indeed, as a winter resort that Santa Barbara is famous, although it is perfectly delightful in summer also. A wide, paved street extends for several miles through the center of town, and, branching off from this in many directions, are some of the most beautiful drives on the continent. In the newer parts of the town are many elegant residences, but it is the superb country homes that challenge admiration. They are owned by people from New York, Chicago, San Francisco and other cities, some occupied as winter homes, others all the year. The great trees, the driveways, the bridges, the wide lawns, the wealth of flowers and foliage make one feel that he is passing through a scene of enchantment. They have this advantage over similar country seats in other states, that they are equally beautiful in summer and winter. People come here from all parts of the country but it is much more popular in the winter than in the summer. Bathing is not so agreeable here as at Santa Monica because the beach is at a considerable distance from the residence portion of the town, and the quiet waters of the bay do not offer the attraction of the great rolling breakers.

I believe it is no exaggeration to say that nowhere in the world are there such flowers as at Santa Barbara. There are gardens here 100 years old. The growth goes on the same winter and summer, and things bloom more profusely in the winter. There seems to be no limit to the vines. They cover the whole house, if permitted, and climb to the tops of the chimneys, and even to the very tips of the lightning rods, and are a mass of riotous bloom. One rose vine is known to have borne 100,000 blossoms in a season. On a suburban ranche near here is a camellia japonica twelve feet high, which has 1,500 buds and blossoms at one time, each as large as a small saucer and bright red. I have ceased to be astonished at anything in the way of flowers, or to make any attempt to express my admiration.

One of the most unique attractions of Santa Barbara is the Old Mission, which stands like a sentinel upon the mountain side and overlooks the entire valley and the blue seas beyond. We felt fully repaid for rising early on Sunday and attending morning service, conducted by the Franciscan monks, and wandering afterwards through the quaint old cemetery, listening to the bells which, for more than a century,

have rung out the matins and vespers. These missions, scattered at intervals along the coast are, perhaps, the most interesting features of California. They were founded in the latter part of the eighteenth century by the Franciscan Fathers, who came up from Mexico to Christianize the Indians. They selected the most beautiful and fertile locations, and, with infinite toil and industry, built up magnificent properties, orchards, vineyards and gardens, constructed aqueducts, collected great herds of cattle and civilized the Indians. Then, when they became rich and prosperous the Mexican government, looking with greedy eyes upon their possessions, passed an act confiscating the church property, and, in many instances, plundering the missions. By 1840 their ruin was complete. Many of them were destroyed and those that remain are mere parish churches. It is a black chapter in history.

California seems very negligent in regard to preserving the ancient relics. The picturesque Spanish houses, with their adobe walls and moss covered tile roofs, are fast disappearing. The greed for wealth is the predominating passion, and, as these quaint buildings are usually upon desirable locations, they are ruthlessly torn down to make room for smart new houses with their fresh paint and cheap ornamentation. They have almost passed out of existence, and with them that proud old Spanish race, noted for their generous hospitality, once the wealthy and aristocratic land owners of the Pacific coast, now scattered, impoverished and almost extinct.

To see all the points of interest in Southern California in one summer would be impossible, and we find our vacation drawing to a close with many places still unvisited. It has been, however, a most restful and entertaining summer. Very few days has the thermometer gone above 70°. The air is light and stimulating, the nights almost too cool. We have made many charming acquaintances only, alas, to say "good bye" before the friendship was hardly formed. We go back to work refreshed and strengthened, and deeply thankful for the privilege of spending a season so rich in happy experiences.

August, 1894.

#### EDITORIAL NOTES.

I wish, every month, that we could have a dozen times as much space for our editorial notes, or, better still, that we had a weekly instead of a monthly in which to write them. The *Household Realm*, a very able magazine published by Miss Alice Webster, at Cleveland, O., sets aside one page which she very cleverly calls the "Man's Department," and it is conducted as the Woman's Department of various

publications used to be. It will be admitted nowadays, we think, that the "woman question" in its various phases, has long since emerged from its corner and occupies a large amount of space in the papers and magazines of the day. The growth of women in public importance has been marvelous, and one hardly would dare predict their position a generation hence. One thing, however, may be safely declared, it will be as much superior to that she occupies at present, as she now holds in advance of the last generation.

\* \* \*

The Committee on Woman Suffrage has presented an adverse report to the New York Constitutional Convention. They voted against every amendment proposed to permit women to vote upon questions of schools or taxes; to authorize the legislature to confer the right of suffrage; to permit women who own property to vote; to allow any vote of either men or women to be taken in the state of New York as to whether the ballot shall be given to women. This is about as sweeping as could be, and it is done in face of the facts, first, that the women of New York already have school suffrage, conferred by the last legislature; second, that the women of that state pay taxes on over \$400,000,000 of property; third, that a petition asking for woman suffrage was presented to the committee signed by 400,000 citizens of New York state, over twenty-one years old. Notwithstanding the report of this committee, a fight will be made in the convention to secure the amendment. We have said, from the start, that we do not believe it will be successful. The movement is opposed by a solid army of brewers, saloon keepers, gamblers and the whole strength of Tammany Hall, and we doubt if any measure can prevail against such forces. In connection with this, here is one article of the constitution of New York: "For the purpose of voting no person shall be deemed to have lost a residence . . . while kept at any alms-house, or other asylum, or at public expense, nor while confined in any public prison." Paupers, lunatics, criminals, carefully guarded in their right of franchise, which is positively refused to the women of the state who are among the most intelligent and competent to be found in the world.

\* \* \*

In pleasant contrast to this is the action of the Republican state conventions of California and North Dakota, which put a woman suffrage plank in their platform, and the action of the national convention of Republican Leagues at Denver, which adopted a resolution favoring equal suffrage. The Populist state convention of

South Dakota adopted a woman suffrage plank almost unanimously and with great enthusiasm. Similar action was taken in the state of Washington. On the other hand, the Democratic state convention of Kansas denounced woman suffrage, and their candidate for governor, David Obermyer, in his speech opening the campaign, spoke strongly and bitterly against it. Mr. Smith, editor of the *Leavenworth Journal of Commerce and Post*, has issued a manifesto to the Democratic newspapers of the state, telling them that it is made their duty by the platform to combat woman suffrage. And so the fight goes on.

\* \* \*

The friends of temperance, whether Protestant, Catholic or non-sectarian, will greet with the warmest approval the recent decision of Monsignor Satolli, the representative of the pope in the United States. Bishop Watterson, of Columbus, O., announced that he would suspend from its rank and privileges any Catholic society having saloonkeepers among its members, would recognize no new society having them on its membership rolls, and would refuse admission to any saloon keeper who sells on Sunday or conducts his business in a disreputable manner. An appeal was made to Archbishop Satolli, who sustained the bishop upon every point, declared that "the liquor traffic is a source of much evil, and favored the expelling of saloonkeepers from all Catholic societies. This is the most important action ever taken by the Catholic church upon the temperance question and deserves the highest commendation."

\* \* \*

In a recent speech Ex-Senator Ingalls declared that he is opposed to woman suffrage because his mother, sisters, wife and daughters do not want it. And so all the women of Kansas must be disfranchised because the ladies of the Ingalls family do not wish to vote! If ever the Kansas women do get the ballot, it is safe to say that Mr. Ingalls will carry that "Ex" appendage to his name for a good long time.

\* \* \*

The men really are having a hard time of it. One of them cards the papers to say that he had to sit in the moonlight for an hour with a pretty girl in a hammock and listen to her talk equal rights while he wanted to talk love. Another jeered at a girl riding a bicycle in Lincoln Park, Chicago, and she had him arrested and fined \$25.

\* \* \*

A Pennsylvania woman, 93 years old, with 170 descendants, issues a challenge to any woman of her age to ride a bicycle race for a bible. Some of us who have tried it think

we shall be quite that old and have as many descendants before we learn to master the two-wheeled machine.

\* \* \*

The Republican, Democratic and Prohibition state conventions of Illinois have nominated a woman for trustee of the State University, so whichever way the political wind blows, it is bound to blow a woman upon the State Board of Trustees.

*Health and Duty Due the Soul.*

That everyone should maintain and possess a healthy body is now considered one of the requisites of moral and christian citizenship. Or, in other words, that it is a duty every person owes his soul.

Hitherto "men have practically regarded themselves as bodies possessing souls, rather than as souls possessing bodies," but it has been understood, at last, that to be true to the soul, to bring out its best and highest elements, one must keep a pure abiding place for its habitation. Not only must the body be pure and sweet, exercising all its functions, but pure and bright thoughts have much in common with keeping both soul and body well. In a paper read before the Congress of Scientists, held in San Francisco, May 29 to June 4, 1894, this passage occurs:

"Those things which are most useful and beautiful, when inverted and abused, become most baneful. Thought may be a beautiful builder or a malign destroyer. With orderly and powerful creative energy, when rightly directed, it may invigorate the human form divine, purge it of impurity and cause it to thrill with harmonious vibration and wholeness. From the spiritual plane it may illumine and vivify the intellectual, social, æsthetic and industrial faculties in man, giving him a well-rounded and ideal development. It is a power house of such wonderful capacity that its dynamics, when exercised in accord with law, can hardly be estimated or conceived."

"The spiritual store house of man's nature contains rich treasures deposited by divine beneficence, and thought is the key that unlocks and bestows them. Intelligently directed it is the 'prayer without ceasing.' Man exercises his prerogative as a son of God in proportion as, through his own volition, he enters into his allotted kingdom and wisely transforms it. In the deep recesses of his own nature he may uncover a fountain from which will flow forth new and ever ascending aspirations and ideals."

With a pain-racked body that by abuse and selfish indulgence we have rendered unfit for mental or physical work how can we expect to attain a high and lofty ideal of thought.

The day will yet come when to be ill will be the sure sign that we have by heredity absorbed some loathsome taints from bygone ancestors, because the time will come when to neglect the laws of health and happiness will be considered unchristian, uncivilized and unclean. And when this has happened all those clean-born will be healthful.

But while there are so many who are poor and unable to maintain the healthy conditions that are required of man, by bi-Maker, in order that he can observe the laws of health there must be something criminally wrong with the civilization that permits this poverty and degradation in the midst of plenty.

While a country in which men are supposed to make the laws by their ballots permits millions of acres of fertile lands to be held for speculative purposes, while the improvements made by one man are taxed to increase the value of this land speculator's domains. While the hand of the oppressor falls so heavily on the small farmer that he is continually leaving the rural districts and coming into the city to take the places of mechanic and artisan at what he on the farm would consider good wages, because there he has board, fuel and washing provided, and never thinks that in the city they are to buy. While in the unrest and hopeless condition of the present times there is neither money nor confidence enough to prevent millions of honest men from traversing the country in search of employment, dare we say "we are our brother's keepers."

Yet we are, truly we are. Everyone stands singly and alone responsible before God for not doing his best—not giving his mite to eradicate these wrongs and helping to give everyone a healthy body and a pure mind. Not doing what we can to uplift the human race and let the new light with its dazzling rays penetrate into the dark gloom and pessimism of the present and transform them into abodes of warmth and brightness.

Mrs. M. W. Harpold.

ITALY, TEXAS.

*"The Most Magnificent House in the World."*

It is not often that a man can buy a \$150,000 house simply to tear it down and make a flower garden in the space it occupied. It is not every one who can afford to indulge such an expensive fancy, for a city garden necessitates an enormous outlay of money, but the fame of the Vanderbilts' wealth is world-wide, and there is no lack of funds to prevent the gratification of any desire, even though it be for breathing room only. Mr. Cornelius Vanderbilt has purchased the Seventh Regiment club house, on the corner of Fifty-eighth street and Fifth Ave-

nue, at an expenditure of \$150,000, for the purpose of making a garden in front of the palatial-like residence he is now building. His original house stood on the corner of Fifty-seventh street and Fifth Avenue, in the famous spot known as millionaires' four corners, and four large and costly brown stone residences on Fifth Avenue and the Seventh Regiment club house on Fifty-eighth street occupied the space desired for his garden plot. The only thing to do was to purchase the entire lot, which was done, and the residences have been removed day by day, and the new wing added to the house. When completed it will be not only the largest and most magnificent private residence in New York, but in the whole United States. It is made of brick and granite and will cost about \$7,000,000. No expense has been spared in erecting this structure. The walls were designed and decorated in France and brought to this country, and skilled workmen accompanied them and will put them in proper position. The flower space is even larger than that of many large hotels, and the rooms are large and spacious. Every article of furniture has been imported from foreign countries and even the iron fencing, which is to surround the garden on all sides, was brought from England, and it has only its English origin, which gives it favor, for its architecture is neither elegant or attractive.

Workingmen, is there anything in the above item, copied from *The Popular Magazine*, that interests or concerns you? Is there anything in it that concerns the industries of America? Is there anything in it that concerns the vast army of unemployed American laborers? What does the American millionaire say to American labor? Simply this: "I want none of you, you may starve, die, rot in the open air, I will not employ you. American industries may sink or swim, I will employ foreign designers and decorators, I will use only imported furniture, and an English fence." Workingmen, do you see the "handwriting on the wall?" Does it concern the hungry, ragged, homeless American tramp, that foreign labor is preferred to American? When I think of a \$150,000 flower garden and a \$7,000,000 residence in a country filled with pale faced poverty, I wonder that God does not pour out the last vial of his wrath on this millionaire-cursed world. But after all God is not to blame. He never made a millionaire. The laboring men of America have made the golden calf themselves. They have blindly laid nine-tenths of their earnings on its altar. They have worshipped it, obeyed it, voted for it, they have become abject slaves to the golden beast. Even now in this boasted land of the free there is the right of way

and the grass (who made the earth and the grass?) upon which you must not trespass. The bristling bayonet warns you, a poor unarmed tramp, to move on. Everybody tells you to move on. You have made the country rich and fruitful by your labor, now you must vacate the earth. Where will you go? It don't seem hardly right to send you to hades. Heaven with its golden streets and jeweled gates is the millionaire's home. A poor tramp would be out of place in such a fine residence. Perhaps if the tramp would get off the earth he would find a new continent, but I suppose the first thing he would do would be to pay some one a big salary to legislate in the interest of the coming millionaires. Now, workingmen, let me tell you a fact, you have the most powerful weapon ever placed in the hands of a people, the ballot, rightly used, will free you. Strike at the ballot box for bread and home, or the time may come when even that right may be denied you. You are the majority, by a united ballot you can save the American laborer and the American industries. Then let the American millionaires move to a foreign country where things and people are more to their taste, if not so elegant and artistic.

Mrs. M. Orrell.

MURPHYSBORO, Ill.

What is the matter with C. U. Again? By the way, is that his name, *nom de plume*, or a threat to come again? Did his best girl jilt him for a millionaire of 60? "Perish the thought."

"For Popult, For Del."

"Man is a creature composed of a body and soul made to the image and likeness of God." If we would only reflect on the phrase "made to the image and likeness of God," it would enable us to have constantly before our mind the idea that man is the physical likeness of God in every respect, and this knowledge would impress upon us our position in the work of creation.

Man is the medium through which God speaks to his people, for, was it not the disciples and their followers whom God chose to impart to the world the object of our redemption by Him? It seems to me that the voices of such men as Napoleon, Garibaldi, the Duke of Wellington, and hosts of others, rising amidst the din of those times and encouraging the people by their eloquent speeches, leave the impression that the voices of the people of France, England and Italy were but the inspiration from the voice of God, and made the people realize that their voice was the echo of God's proclaiming to the world that which is right. It is also true that the voice of the wicked is the voice of God, but the wicked are those that hear the word of God, but,

going their way, are choked with the pleasures of life, and steeling their hearts against good, forget that the voices of earth, though faint and weak, are the echoes of His voice from heaven, begging them to be good and strive for a noble end.

If men would only think of this likeness to God, would there not be less profane language used?

Yes, and if they should remember "Vox populi, vox Dei," the sentinel at the close of day would cry, "All is well."

#### *Letter From Indian Territory.*

To pass away one of the hot afternoons we have down here in the territory, I got out an old volume of the MAGAZINE, and in looking over the letters, I found I was not very far from several of the old contributors, the nearest being "Irene," of Ft. Worth. I wonder if she is still living there. I shall try to imagine which one of all the throng she is when I go down to Ft. Worth visiting. Also, "Annie Sams," of Roanoke; "Rose Temple," of El Paso; "Charlie," of Kyle; "Azariah," of Dallas; "C. J. Bell," of Brownville, and several others.

In moving we have lost, or missed getting so many numbers, that I have rather lost track of the contributors, and am not on to the combination of real names and noms des plumes. We are now in the land of the noble (?) red-man. They look quite picturesque in their war paints and feathers. But how they can endure to wrap themselves in great woolen blankets in this warm climate, and this time of year, is more than I can understand.

The noted Mission schools are eighteen miles west of us.

What has become of "Chrysanthemum?"

*Olive-Roby Ferguson.*

CHICKASHA, I. T.

[The Woman's Department would be glad to know what has become of all these old contributors. Many have been frightened away by the rule which requires the correct name to be signed. Others are discouraged by the long delay in publishing their letters. The correspondence is prepared and forwarded every month but the columns are so crowded that they have to wait.—ED.]

#### *Why Bobby Was a Skeptic.*

Skeptics, unlike poets, are made, not born. Bobby was a skeptic. All through the long Sunday school hour he sat with his little face unyielding and cynical, and his bright black eyes undimmed by the emotion which rushed up in warm tears to the eyes of his classmates when the old, sweet stories of the bible were retold.

It was springtime, and from the dusty window of the little unpainted country

school house, the boy could see the smiling of the newly-awakened earth. Just at the edge of the orchard, in his sight, a rugged apple tree lifted a gnarled, black arm to hold its first bouquet of blossoms high against the sky, and deeper in he knew the grass was soft and green and flecked with tender violets of white and blue.

The theme that day had been the beautiful promise, "He will give his angels charge concerning thee," and Bobby had listened to the reading in respectful silence. The teacher laid her pretty white hand upon his sunburned fingers. "Do you ever pray, Robbie?" she asked.

The boy flushed painfully, but with his honest eyes fixed full upon her, he shook his head. Her tender eyes filled with tears.

"Oh, Bobbie!" she said, "how can you go through the long, dark night without first kneeling down and asking that the angels may be sent to guard your bed?"

Bobby stammered. The round, grieved eyes of the other little rascals, his classmates, were upon him, demanding an explanation.

"Are you not afraid, dear," his teacher repeated, "to go to sleep without saying a prayer?"

A hand seemed to close around his throat. He had believed that he had a right to keep his secret reason for his doubt in his own heart, but it was plain that he must tell in self defense. The tears were very near the surface.

"No, ma'am," he answered; "I ain't afraid to go to sleep; I'm only jes' afraid to go through the pasture—'cause the old goat bumps me every time. I've prayed—an' prayed (with a long sob). Every time I had to cross the field I us to kneel down by the bars, on the outside, an' pray that old Billy would't see me, but whack! he'd come jes' the same, an' I found out it didn't do no good to ask. It ain't so bad to get knocked down now, you see, 'cause I'm expectin' it; but (with a tremulous sigh) when a feller is dependin' on angels it's pretty bad to get left."—*Chicago Post.*

#### *A Crack at Woman.*

In its beginning conceit or vanity is a virtue, not a vice. It is the conscious sense of noblesse, obliging man to live up to his noblesse. It is the desire for admiration, keeping woman up to the plane of pleasing. In other words, it is a most powerful incentive to right-seeming and right-being.

Exactly where the virtue shades off into a vice is a nice question to determine. But in a broad and general way we can say that whenever the consciousness of deserving admiration or the desire for admiration is overweening and overwhelming; whenever it is a lie or the cause of lies; whenever it induces the individual to be offensive, over-

saring or ridiculous; whenever it leads to the sacrifice of principle, honor and self-respect; whenever it entails the discomfort of others—then it is a vice, and is properly stigmatized by the unpleasant name of conceit or vanity.

Now, in which sex is the inordinate love of admiration attended with the greater loss of principle, truth and self respect—in which does it take on the more offensive, unbearable and ridiculous shape? That the conceit of man is more unbearable than the vanity of woman is self-evident. For man is the stronger sex, and it is the tendency of ill-directed strength to be overbearing.

Undoubtedly this is a condition of mind that is unpleasant and vexatious to other minds which are brought in contact therewith. But at least it has the merit of truthfulness. At least the man believes in himself. He credits himself with the qualities upon which he conceits himself. The fact may not be a fact; to him, however, it is a fact.

But a woman's vanity is never entirely truthful, never entirely sincere. It is the wild desire to impress by appearing to be something which she is not, and which she instinctively knows she is not. It is a confession of weakness in the very attempt to put on a show of strength. A vice that is based upon an honest misconception of fact is infinitely less harmful than a vice that is based upon a wilful distortion of fact. A lie is really the only great crime that a human being can commit. Well and wisely did the old theologians, when boasting about for a name which should hold up the enemy of mankind to the uttermost detestation, brand him and stigmatize him forever as the Father of Lies. And because the vanity of woman is founded upon untruth it is more offensive and ridiculous, and entails a greater loss of principle, of honor, of self-respect, than the conceit of man.—*W. S. Walsh, in North American Review.*

#### *Signaling to Mars.*

Astronomers of the day are strangely excited at present. They are trying to fathom a startling mystery. Luminous points have been discerned sticking out of Mars and the theory has been suggested that they may be beacon lights hung there by the inhabitants of the planet as signals to the people of the earth that the existence of their world is known, and that the opening of a line of communication between the two spheres would be exceedingly pleasant and interesting. Should there be any basis for this idea the Martians must have a good deal of perseverance. It is four years since the luminous points referred to were first detected. They have not been in sight con-

tinuously, but whenever the planet gets into a certain position they are found to be still hanging there.

What bothers the originators and supporters of the theory is to discover some way of answering back, so that it may be definitely decided whether the lights have been hung out for our benefit or not. Do the people of Mars know anything about electricity? If so, could a light strong enough to be seen at Mars be produced? The new government light at Sandy Hook throws a light one hundred miles over the sea. Mars is 40,000,000 miles away from us, however, and between 100 and 40,000,000 there is an alarming difference. May be the Martians have keener vision than the people of earth. They may have more powerful telescopes. If they are really trying to signal to us it would go to show they are endowed with ingenuity. They might be much quicker at detecting our signals than our astronomers have been in discovering and comprehending theirs.

It has been suggested that a huge electric triangle be erected on the most conspicuous point to be found suitable for the purpose. The sides of it should not be less than one hundred miles in length. They should be studded over the entire distance with the strongest electric lights that can be made. These lights should be kept going long enough to give the Martians time to discover and comprehend the signal. Then if the luminous points seen on that planet assumed the form of a triangle it would show that the signal had been seen and understood. After that a code of signals might be arranged whereby the people of the two worlds might communicate regularly with each other. The scheme is alluring and interesting enough to receive attention. It may yet prove as fascinating as the discovery of the north pole.—*Chicago Post.*

#### *HIS REASON.*

"I'm going back to town," he said,  
Spake the maiden, "Say no more."  
While the waves from the sea curled restlessly  
Over the whitened shore.

"You're cruel and heartless and all things else,  
You're a mean old hard thing!  
For you said you'd stay till I went away,  
There! I'll give you back your ring."

"I'm going back to town." "Enough!"  
She spake with a look of scorn.  
"I'll make you suffer you poor old duffer,  
And sorry that you were born."

"You are going back to town, then go,  
There are other men as sweet!"  
And she quickly rose from her former pose,  
And moved away ten feet.

"I'm going back to town," he said;  
"Nay, dearest, hear me speak  
And don't be rash—to get the cash  
To carry me through next week."

OCTOBER, 1894.

## A LARGER STANDING ARMY.

There is now a demand, made by certain military gentlemen who wear shoulder-straps and who are fed from the public crib, for a larger standing army. It has been suggested that there should be a military post in every state, where at least a thousand soldiers should be stationed and held in readiness for serious work.

In looking over the field, men inquire: What is the necessity for a larger standing army? Are there any enemies in sight, foreign or domestic? Is there a probability of an invasion from Mexico or Canada? No replies are made to these queries, and still the demand is made for a larger standing army, more federal troops. It is understood that corporations of the Pullman and Homestead stripe, coal operators and railroad magnates and other employers of labor, favor the increase of the federal army, and it is just here that the secret leaks out. The patriot is the man who reduces wages, and the enemy to be shot down is the man who resists spoliation. The plutocrat believes in powder, ball and bayonet. He has observed their quieting effects. Every workingman killed for clamoring for fair wages helps the piratical employer amazingly. The circumstance, while it intimidates workingmen, emboldens the pirate—assures him of security, and impresses him with confidence in the strength of the government, and the act is wildly applauded. If Europeans so much as intimate that ours is not a strong government, the president, the general in command and the corporations point proudly to battlefields where

workingmen lie stiff and cold in their bloody rags, and ask what European government can improve upon the spectacle? Europe looks, and acknowledges the *corn*, and joins in with American plutocratic patriots in singing our national anthem: "The Star Spangled Banner."

The president orders out the federal troops. Having been a hangman he has the required nerve to do his duty when a murderer is to be hanged or a workingman shot. On such occasions he expands to the largest proportions of a czar, sultan or shah, and yet, there is something connected with the business which seemingly troubles his waking and sleeping hours. Possibly dead men visit him in his dreams and show him their wounds, flaunt their bloody shirts in his face, call his attention to their gloomy homes, introduce him to their starving wives and children, and bother him so much that congress comes to his aid and passes resolutions applauding his military orders. It does not matter that the congress which indorses the military exploits of the president is the target for the scorn and contempt, the flings and jeers of the country, imbecile and incapable to an extent that defies characterization—bribed and debauched, vulgar and venal until all the people cry out: Shame! It is the congress fitted by nature and acquirements to vote that the military remedy for labor trouble is just the thing, and the plutocratic corporations cry the louder for a larger standing army. The enemy to be subdued is labor.

At the same time, while the demand is being made for a larger standing army, governors of states and military gentlemen of small caliber are demanding a larger "home guard," more state troops, greater military efficiency. If it is asked why this demand the reply is that labor is becoming dangerous. It will not be degraded and robbed to please the corporation, but as that is just what the military machine is for and nothing else, the corporation insists upon more state troops. If, however, the active state militia is to be increased, the recruits must come chiefly from the ranks of labor, and workingmen, in the event of becoming a part of the military machine, will be re-

ired, if ordered, to shoot down their fellow workmen. If they, however, do not want to join in that sort of work they can easily avoid it by refusing to enlist.

In this connection an incident at Pullman has special significance. It was reported by the Associated Press as follows:

The sensation of the day at Pullman was the refusal of Company M of the 1st Infantry to eat at the same table with non-union workmen. At 1:30 o'clock Lieut. Wra marched Company M up to the big mess tent at stands on the lawn behind the Hotel Florence. Here the company was left in command of Sergt. Cook. When the company came to break ranks at the tent entrance they were indignant to see two tables within filled with non-union employes of the Pullman company. The workmen were a part of the new force hired to-day. They had been smuggled in with the soldier boys on the apology that they were tired to go home for dinner. As the practice had been tried in a smaller way last week to the distaste of the company, the soldiers were prepared for decisive action. William Byrnes, a member of the company, stepped into the entrance and said:

"As volunteer soldiers the men of Company M are here to see that the laws of Illinois are obeyed. I am not aware that it is soldierly or that discipline compels us to do what we feel is unpatriotic and not worthy of gentlemen. My scruples demand that I shall not associate with scabs. I refuse to sit with them at the same table."

There was an outburst of applause from Byrnes's comrades, and Sergt. Cook marched the company across the street and broke ranks.

"We will not enter that tent," a dozen privates said, "till we are assured that all non-union workmen are to be kept out."

The workmen were finally marched out and the company marched in, receiving the assurance that they will hereafter have the mess tent to themselves.

The foregoing has been widely commented upon by the press, the point being made that a soldier on duty is not expected to have any views of his own; being a part of an unthinking machine he is simply to obey the orders of his superiors, shoot, stab, hew down and trample upon those he is told are the enemies of the state, and eat his grub without having anything to say about his surroundings. The Pullman incident is, therefore, in the line of rebellion, mutiny, grave insubordination, but it sharply defines the deepseated hostility of state troops to scabs—men who are willing to accept such degrading wages as corporations choose to offer. Taking this view of the subject, the Pullman incident is a note of warning that plutocratic employers will do well to heed, since it is indicative of still

graver incidents of insubordination on the part of state troops recruited from the ranks of workmen.

#### ALTGELD AND PULLMAN.

For a number of years the town of Pullman has been regarded as a sort of a paradise, an Eden, where the "thorny stem of time" was continually blossoming and producing the most delicious fruits that labor ever gathered and garnered. Descriptions of Pullman became revised editions of "Baxter's Saints' Rest." Painted or modeled, Pullman appeared a fairy land, and George M. Pullman, in white robes, playing angel, was forever singing:

"Here bring your tools and skill,  
Here rent my houses,  
Labor has no sorrows  
Pullman cannot heal."

And, sure enough, men flocked to Pullman with their wives and children, their tools and their skill; they rented Pullman houses, burned Pullman gas, drank Pullman water, and became Pullman slaves.

Geo. M. Pullman grew fat faster and faster until he bloomed into a multi-millionaire. The more millions he secured, the meaner he became. Pullman gradually lost his parasitical pretensions and became more like a poor farm—a penitentiary, or slave pen. Wages were reduced, clothes became ragged, food scarce, rent high, and hence, debt, destitution and despair transformed Pullman into a sort of a hell hole, where Geo. M. Pullman personated his royal forked tailed highness to a dot. With true satanic genius he gave his slaves the choice to work or starve, or work and starve. In either case, starvation was their fate, and starvation has come. Fully eight thousand men, women and children in Pullman are in the grasp of famine.

Governor Altgeld, having been made aware of the deplorable condition of Geo. M. Pullman's late employes, issued the following proclamation to the people of Illinois, and especially to the citizens of Chicago:

"There is great distress growing out of the want of food in and around the town of Pullman. More than a thousand families, or in the neighborhood of six thousand people, are utterly destitute—nearly four-fifths of these are women and children. The men have endeavored to get work, but were unable to do

so. \* \* \* As a rule the men are a superior class of laboring people—industrious, capable and steady, and some of them have worked for the Pullman company for more than ten years. Those who have been given work can get food, but are still in such an impoverished condition that they cannot help their neighbors if they would. The relief society is unable to get more supplies. On last Saturday it gave to each family two pounds of oatmeal and two pounds of cornmeal, and, having nothing left, it suspended operations, leaving the people in an absolutely helpless condition. The County Commissioners of Cook county, as overseers of the poor, have rendered some assistance, but, owing to limited appropriation, they can furnish relief but for a short time. We cannot now stop to inquire the cause of this distress. The good people of this State cannot allow women and children by the hundred to perish of hunger. I therefore call upon all humane and charitably disposed citizens to contribute what they can toward giving relief to these people." The Governor has also called on the Commissioners of Cook county to do all in their power in the matter.

The foregoing reads like a wail from India or Russia. It informs the world that Pullman is famine-cursed and that help must come speedily if Pullman's slaves are to be rescued from death by starvation. Gov. Altgeld telegraphed George M. Pullman regarding the condition of his former employees, as follows:

"It is claimed they struck because, after years of toil, their loaves were so reduced that their children went hungry. Admitting that they were wrong and foolish, they had yet served you long and well, and you must feel some interest in them. They do not stand on the same footing with you, so that much must be overlooked. The State of Illinois has not the least desire to meddle in the affairs of your company, but it cannot allow a whole community within its borders to perish of hunger. The local overseer of the poor has been appealed to, but there is a limit to what he can do. I cannot help them very much at present, so, unless relief comes from some other source, I shall either have to call an extra session of the Legislature to make special appropriations or else issue an appeal to the humane people of the State to give bread to your recent employees. It seems to me that you would prefer to relieve the situation yourself, especially as it has cost the State upwards of \$50,000 to protect your property and as both State and the public have suffered enormous loss and expense on account of disturbances that grew out of the trouble between your company and its workmen."

The millionaire, true to his cold-blooded nature, remained silent and passive. Gov. Altgeld became heroic, and having made a personal inspection of Pullman homes, addressed a letter to the conscienceless author of the horrible discord, in which he said:

"I examined the conditions at Pullman yesterday, visited even the kitchens and back rooms of many of

the people. I learn from your manager that last spring there were 3,200 people on the pay roll. Yesterday there were 2,220 at work, but over six hundred of these are new men, so that only about 1,600 of the old employees have been taken back, thus leaving over one thousand of the old employees who have not been taken back. A few hundred have left. The remainder have applied for work, but were told that they were not needed. These are utterly destitute. The relief committee has exhausted its resources. It seems to me your company cannot afford to have me appeal to the charity and humanity of the State to save the lives of your old employees. Four-fifths of those people are women and children. No matter what caused this distress, it must be met. If you will allow me, I will make this suggestion: If you had shut down your works last fall when you say business was poorer you would not have expected to get any rent from your tenants; now, while a dollar is a large sum to each of these people, all the rent now due is a comparatively small matter to you. If you will cancel all rent to Oct. 1 you would be as well off as if you had shut down. This would enable those who are at work to meet their most pressing wants. Then, if you cannot give work to all, work some half time, so that all can at least get something to eat for their families. This will give immediate relief to the whole situation, and then by degrees assist as many to go elsewhere as desire to do so, and all to whom you cannot give work. In this way something like a normal condition could be re-established at Pullman before winter, and you would not be out any more than you would have been had you shut down a year ago."

To this letter Governor Altgeld received a reply from George M. Pullman, declining to contribute to the suffering people in his town, and the governor therefore dismissed him, substantially, as follows:

"I see that your company refuses to do anything towards relieving the situation at Pullman. If you will make the round I made, go into the houses of these people, meet them face to face and talk with them you will be convinced that none of them had \$1,300 or any other sum of money a few weeks ago. It is not my business to fix the moral responsibility in this case. There are nearly six thousand people suffering for want of food. They were your employees, and four-fifths of them are women and children. Some of these people have worked for you more than ten years. I assumed that even if they were wrong and had been foolish, you would not be willing to see them perish. I also assumed that, as the State had just been to a large expense to protect your property, you would not want to have the public shoulder the burden of relieving distress in your town. As you refuse to do anything to relieve the suffering in this case, I am compelled to appeal to the humanity of the people of Illinois to do so."

The foregoing is only an outline of a corporation campaign against enslaved and starving men, women and children of unparalleled greed and satanic cruelty. We in-

troduce a mere synopsis of Pullman's rapacity and depravity, to preserve the record, and exhibit George M. Pullman before the world as one of the meanest monsters the country has produced.

#### AN ERA OF BLOODHOUNDISM.

"Down South," when a "nigger" commits a crime and runs away, the first thought is to put bloodhounds upon his track. Some "niggers" evade the hounds. The hounds lose the "scent," and the "nigger" goes free, at least for a time. "Up North" things are transpiring which suggest the bloodhound tactics in vogue "down South." When workmen arouse the ire of the railroad magnates by resisting oppression, spoliation and degradation, having no faith in the ordinary methods of repressing wrong, the magnates fly to the federal courts, which promptly issue "injunctions, which in every essential particular are as arbitrary and as despotic as ever emanated from a czar or a sultan, and to compel obedience, selections are made from the rabble and criminal element to play the role of deputy marshals, and armed with pistols, they are put upon the track of workmen, *a la* bloodhounds hunting "niggers," to capture or to kill as their brutal instincts may dictate, and when these official hounds do not suffice, these federal officials, paid from revenues created by labor, "touch the button," and the land swarms with troops, ordered out by state and federal authorities, and then the plutocratic class and their lickspittles, the press vermin, that riot in the hair and intestines of corporations, applaud such bloodhoundism.

Rev. John Snyder, in the *St. Louis Globe-Democrat*, in the list of "Timely Topics," which he discusses, refers to the act of President Cleveland in sending federal troops to Chicago, an act which has been uproariously indorsed by both houses of congress. Mr. Snyder professes to have "unbounded confidence in Mr. Cleveland's honesty and patriotism and large admiration for his wisdom and statesmanlike qualities;" nevertheless, he believes that Governor Altgeld, of Illinois, in his acts and protests, "is nearer the spirit and purpose of the constitution than the President." He offers a

lame apology for the course pursued by the President, and adds:

But history shows that nations have seen their rights gradually melt away under just such pleas of pressing necessity. Besides, there is no evidence that such an emergency had arisen as the President seemed to assume. The state of Illinois was abundantly able to cope with the conditions, even though the moving or detention of the United States mail was a question at issue. The danger has already passed, and as serious as it was, it never assumed such proportions as justified the denial of the clearly implied right of the state of Illinois to protect the interest of its citizens without federal interference; and a bad precedent has been established. The very heart and core of our governmental system is found in state autonomy. Take that away and we become simply an unwieldy and inelastic mass which will slowly drift into a centralized and bureaucratic despotism. We fought the war of 1861 to destroy the notion that this union could be legally dismembered; not to cancel or obscure the plain, constitutional right of state sovereignty. Mr. Altgeld may be an anarchist and a blatherskite, but I solemnly believe that when this hour of natural human passion has passed away his protest to the President's action will be regarded as sound in logic and strong in its adherence to the spirit of constitutional law.

In analyzing the foregoing, it is easy to see that the writer believes President Cleveland to be a usurper, who has violated the constitution and has established a dangerous and an alarming precedent, which has only to be followed and re-enacted as often as the creatures of federal preference may demand it, to ultimately establish a despotism upon the ruins of the Republic. That their executive outrages are perpetrated in the interest of the rich is shown in every stage of the proceedings. In the name of law and order law is struck down, the will of a despot is substituted, and though quiet may be established by bullets and bayonets it is not order, but oppression, submission *par* necessity, with a *proviso*, to be thrown off when conditions promise a glimmering chance for the down-trodden to break their yokes and chains—a policy fruitful of protests and inflammatory appeals, calling always for more troops and other equipments to maintain a government which was once the government, by, of, and for the people, which found its support, strength and glory in the intelligence, prosperity and sympathy of the masses, but which now in its legislative, judicial and military departments is a government by, of, and for the plutocratic class, from which the masses

are turning with loathing. This condition of things is treated with levity and scorn. The courts issue decrees and fine and imprison men without trial, and when men protest, chief executives, with the vengeance of savages, institute bloodhound tactics and hunt down those who dare resist, as bloodhounds pursue "niggers" "down South," and this is done beneath the starry folds of the national flag, and men are expected to sing—

"Long may it wave,  
O'er the land of the free and the home of the brave."

No sane man can contemplate present conditions with composure. The whole country is volcanic. There is a hot breath of discontent rising from the throats of millions of oppressed men, like smoke from active volcanoes, and the country is in the grasp of alarms, and federal and state bloodhoundism will not make things better.

#### VILLAINY IN HIGH PLACES.

It is very common for a subsidized press now-a-days, in explosive pyrotechnics, to laud and magnify the railroads as the chief factor in carrying forward American civilization. As a result railroad builders, in spite of themselves and their record, are held up as philanthropists, constantly enduring those yearnings of soul for man's happiness and salvation which distinguished the prophets and attuned David's harp to heavenly melodies. The plutocratic swindlers appreciate the contemptible crew of fawning bootlickers, know the dirty material of which they are made, but tolerate them because their nefarious schemes are aided by the subserviency of their menials. The following from the Evansville *Courier* presents a number of these millionaire scamps in their true colors before the public:

Never was there a more colossal robbery than that of the Pacific railroads by C. P. Huntington, Leland Stanford, Mark Hopkins and Charles Crocker. Their aggregate wealth when they commenced the construction of the Central Pacific Railroad was less than \$20,000, according to the tax duplicate of Sacramento, Cal., which was the home of all of them. It has been proven that they made a profit in cash, bonds and stock out of the construction of the Central Pacific and its branches of more than \$100,000,000, and it is also in evidence that the net earnings of the company, all of whose stock they own, have amounted to \$170,000,000 during the past thirty years. Yet

they have not paid 1 cent of interest on the subsidy bonds issued by the government in the aid of this road, nor have they provided an adequate sinking fund to take up the bonds at maturity. The history of the world affords no parallel to this audacious theft, but the same audacity which accomplished it is now being used in Washington to induce congress to give these four millionaire estates another hundred years in which to add to their plunder. They want a century's time for the payment of the principal and interest to the government. They will not get it from this congress although the Republicans of the senate with the help of the six Democratic traitors who have been the attorneys of that other colossal theft known as protection would probably give Huntington and his associates whatever they might ask. They have only to divide the vote of the Democracy, however, so as to assure a Republican congress next year, to get what they want from that party which has always served monopolies, trusts and railroad wreckers and robbers.

Thus are four millionaire miscreants, robbers, as contemptible as so many bunco steerers, or green goods men, rioting in luxury on stolen money, not one dollar in a thousand honestly obtained by any possible verdict honest men would render. They have robbed the government, robbed the public, robbed their employees and pocketed the swag. They have violated laws and contracts, but the government has taken no adequate steps to punish the rascals. The courts issue no restraining orders to suppress the rascals, and their robberies go unpunished. The facts made public startle the country because it is seen that the government, by its congress and courts, permit rascality in high places to prosper without let or hindrance while with lynx-eyed vigilance it watches poor devils, who, being robbed by corporations, dare protest, and the moment that they try to secure fair wages from these plutocratic pirates are subjected to all the pains and penalties pampered judges and a military machine impose. Why prate of a government by the people, of the people and for the people, when gangs of organized capitalists plunder the people, and placing their money where it will do the most good, debauch congressmen, senators, legislators and courts, upon the plan of Jay Gould, who, when he wanted a judge to do his bidding, went out and bought him. Under such circumstances it is not surprising that the government, the courts, legislators and military machines, one and all, are looked

upon as being engaged in Russianizing the United States of America for the purpose of filling the land with serfs—giving the lie direct to the old-time eulogy that this is "the land of the free and the home of the brave," demonstrating beyond equivocation that it is becoming the land of the plutocrat and the home of starving, degraded American wage-earners

### COREA.

The war between China and Japan, over Corea, has for some time attracted the attention of civilized countries.

Corea, or Tso-Sien, is a peninsula lying between the Yellow sea on the west and the sea of Japan on the east. In length, Corea is 580 miles, and from 200 to 260 miles in breadth, having an area of 52,000 square miles.

Old time geographers were able to give boundaries sufficiently accurate for schools, but in matters relating to physical aspects, climate, people, government, religion, products, etc., there was a deal of conjecture which later explorations set aside. As for instance we are told by high authority, at a date very modern, that "the Coreans are a well-made race, with an agreeable physiognomy and very polished manners," but more recent accounts represent the people of Corea as a miserable mass of human beings, and as a race about played out, their country inhospitable and dreary—but, strategically considered, important to China, Japan and Russia—hence the war now going on. If it has any significance, it is that Corea shall not be gobbled up by either of the powers named, but shall remain, as it is, in the hands of the natives, who, being ignorant and superstitious and wanting in capabilities, are not dangerous.

It appears that Corea has been for a long time tributary to China, though once upon a time conquered and held by Japan. It is said that the literati of Corea make use of the Chinese language and characters, though the common herd have a language and an alphabet of their own, and further, that the religion of Corea is the same as that of China.

By examining the map, it will be seen, if China can't send troops to Corea by water,

she can march them in overland, by a circuitous route, and since China has a population of about 400,000,000 while Japan is credited with no more than 50,000,000, it would seem that ultimately China would win the pot—that is to say, defeat Japan. This, however, is by no means certain, since the Japs are by far the most warlike people and largely in advance of the Celestials in training, whether the war is conducted on the land or on the sea. Russia would like to transfer Corea to her empire, because such a transfer would give her sea-ports and enable her to develop a great naval force, but, if the time is not yet ripe for the conquest, Russia will see to it that neither China nor Japan acquire control in Corea—hence the war between China and Japan appears to be a singularly foolish affair, having no compensating end in view, since Russia, if she cannot gobble the country, will not permit either China nor Japan to occupy and rule it.

If by some fortunate turn in affairs both China and Japan could be involved in a war with Christian nations, much real good might be achieved. As for instance, all the ports of the two pagan empires might be thrown open to trade, and the barbaric exclusiveness knocked out of them. It is all folly to expect any valuable results from missionary work—these heathens should be required to open their ports and admit the civilizing influences of commercial nations. The idolatry, despotism and exclusiveness of China and Japan should be knocked out of them, and if the war between these copper-colored nations could be made to accomplish such a result, it would be a blessing.

### RICKS.

U. S. District Judge Augustus Ricks appears to be, as Lincoln was in the habit of saying, "a bad egg." A "bad egg" undisturbed is not offensive, but break its shell and the vocabularies of the world are not equal to the task of describing what follows.

Ricks was believed to be a bad egg. As a judge working men had no doubts concerning his rottenness. They believe him to be the weak, pliant, venal and contempti-

ble tool of corporations, ready to do their bidding for such considerations as they might offer. But they are unable to smash his judicial shell and compel the nation to hold its nose. Finally, however, the opportunity came, and the Central Labor Union of Cleveland, O., availed itself of the occasion to expose Ricks, and exhibit him before the country, not only as a judicial Judas and a corporation parasite, but as a man whose accounts are as crooked, as his judicial opinions, showing him to be, and to have been, always on the *make*, totally regardless of the commandment, "Thou shalt not steal."

In overhauling his account, before hell and heaven were outraged by his appointment to the U. S. bench, Ricks has been shown to have been guilty of embezzlement, of defrauding the government, of pocketing money which did not belong to him, in a word, he is charged with being what is termed in police parlance a "sneak thief"—and he is to be investigated by a congressional committee, and if found to be guilty, as will doubtless be the case, away goes his judicial head, and the miserable rascal may find himself wearing stripes instead of judicial ermine. The charge is that he stole something more than \$1,500, and if that amount is uncovered he doubtless managed to steal other amounts which will not be unearthed. Such is Ricks, the corporation judge, who delighted to lay his official paw upon working men.

CANADA has 15,020 miles of railroad track, said to have cost \$872,156,000, or \$58,066 a mile, when in fact \$30,000 a mile would be an overestimate, indicating that the Canadians are trying to pay interest on \$421,551,320 of water. A Judge Caldwell in Canada must be a hugely felt want.

#### To the Real Friends Of the Home For Aged and Disabled Railroad Men.

MY DEAR BROTHERS:—I feel that I must from my very heart thank you one and all for what you are doing to sustain this Home. I have just come from the bedside of the helpless men there. As I sat and talked with the inmates and realized how comfortably they are situated, I said to myself, "how I wish every railroad man in the nation could look in upon them."

If these men had homes of their own and were in independent circumstances as far as money is concerned, they could not be made more comfortable than they are now. These poor men, four of them paralyzed, three of them to such a degree that assistance must be rendered to them in taking their food and in the operations of nature, are now provided for in much better shape than they would usually be in a home of their own.

What would these men do if it were not for the Home I cannot see.

Again let me express to all the contributors for the support of the Home my most heartfelt thanks for the remembrance of a brother's need. To be sure, it is a very small sum each one of you pay, but the great good that comes to these helpless men from these many little is absolutely inexpressible. I firmly believe, did every railroad man in the land know just exactly what good comes to these helpless men as the writer does, there is not one in all the tens and hundreds of thousands who would refuse to contribute his mite to the support of the Home.

Brothers, will you allow me once again to assure you your money is most sacredly and economically used for the one purpose alone, and that is to make as comfortable as possible the unfortunate men who, from accident or exposure have lost health, or by being crippled, can no longer do work on the rail and have no way of making a livelihood.

Some who have had the benefits of the Home have gone out from it, and poor, human nature-like, have attempted to "befoul the nest that so freely gave them shelter." This is disheartening and terribly discouraging to us who have given so much time and toil to its building up. But this should not discourage us. As our Great Leader in working for humanity has said, "If they have done these things to the green tree what will they not do to the dry." He, in the love and compassion of his great heart, cured the ten men who were sick with the loathsome leprosy. Still but one only returned to thank him for doing what no other one could do. So, brothers, if some are ungrateful and return abuse for good done to them, let us, by patient continuing in well-doing, make these helpless men who are now inmates here feel that they indeed have a home where their brother railway men will see to it that their every want shall be fully met.

These are now hard times. Many a man is seeking a job, and we sometimes may have a fear that these men here will be forgotten; but then our faith in railroad men rebukes us. You will not forget them. As I said above, could you all only spend even an hour at the Home you would never

after have to doubt of the good it is doing. Most of you know me well enough to trust me to see for you and you will take my word for it.

As Dr. Ingalls said to me this morning: "If I could be assured that should misfortune come to me I should find as comfortable a home in helplessness as these men now have, I should cast all fear to the winds."

I do then most earnestly hope and trust that in these hard times no one will forget to send in his little mite, so that the doors of the Home shall still stand wide open for every deserving but helpless railroad man.

L. S. Coffin, President.

#### A Word of Caution.

MR. EDITOR:—With the advent of the recent locomotive, with its mammoth firebox arranged to give every inch of heating surface possible, the fireman is besieged with new dangers. To one of the most formidable I wish to call attention. It is one which the fireman seems to recognize the least.

A number of eye cases have recently fallen under my observation, which prompt me to utter a word of advice and caution. I will studiously avoid all medical terms that the laity, one and all, may comprehend the full import of my words.

The covering of the eye ball, particularly that portion concerned in the admission of the rays of light, is made up of very delicate transparent cells. This membrane is continually kept moist by the action of the eye lids. That these cells must be perfectly transparent, in order to allow of perfect vision, must be evident to every man. That they must be kept moist, to avoid friction with the eye lids and irritation from foreign material, is an obvious fact.

The chemical composition of these cells is similar to that of the white of eggs. Now we all know the change that takes place in the egg when exposed to heat. How the transparent portion thickens, turns white and becomes opaque. Firemen, when you swing open the firebox door on one of the modern moving volcanoes, especially those called culm-burners, is not the heat intense? Is not the brilliancy of the fire blinding. Will not repeated exposures of this kind cause the same change in the delicate cell covering of the eye ball as takes place in the egg.

Does not the intense heat rapidly evaporate the protecting fluid of which I spoke; and allow of friction between the eye ball and lids? Does not the blinding brilliancy of the fire have a paralyzing effect upon the nerve of sight? To all these questions ophthalmic surgeons, one and all, answer yes! How may this be prevented? Simply by wearing a pair of colored glasses when look-

ing into the firebox. They will prevent the heat striking the eye ball, causing evaporation of the protecting fluid and opacity of the cells. They will prevent the brilliancy of the fire injuring the nerve of sight.

By this simple precaution you may ward off many sleepless nights from swollen, red, smarting and aching eyes, which would lead finally to impaired vision or total loss of the same.

F. C. Hall, M. D.

SCRANTON, Pa.

#### OCTOBER.

The summer is rolling along,  
The leaves are one color and sear,  
I tell you my boys in this song,  
With the force of a truth-telling tongue,  
That winter will shortly be here.

The time when we'll suffer with chills,  
When we'll ache with the pains in our bones,  
And must swallow whole boxes of pills,  
Yes, and also some quinine and squills,  
To allay our unfortunate groans.

What a beautiful sight it will be,  
For a fellow to roll out of bed,  
About ten feet of hummocks to see,  
Then a breeze full of devil-tongued glee,  
Pelting icicles onto his head!

Ere the sun takes a notion to yawn,  
Ere he thinks from his couch to arise,  
About three or four hours before dawn,  
A poor devil must jump and begone,  
To fight drifts under blizzard-swept skies.

I regret when my lifetime began,  
That my sex was the kind that it is,  
There's no mercy at all for a man,  
While a woman can glide o'er life's span,  
If she's got but a sootherin' phiz.

If we only could muster content,  
And apply it to salve our distress,  
When our minds are on misery bent,  
We need never half starve in the tent  
Of our lives we must truly confess.

Evermore I shall dream I'm a king,  
And I'll not on my face let a frown,  
Whatever the Fates to me bring,  
Yes, I'll laugh and I'll jovially sing,  
But, oh, Lord, I'm in need of a crown!  
—Shandy Maguire.

#### Mr. Carwardine's Book on the Pullman Strike.

Editor *Locomotive Firemen's Magazine*:

I learn that rumors have been unjustly circulated to injure the sale of Rev. W. H. Carwardine's recent book, "The Pullman Strike," on the ground that it was published from a non-union office. The fact of the matter is that the house of Charles H. Kerr & Co. has for years been a reform publishing house in the interest of the people as against capitalists.

A short time ago they acquired by purchase the book composing plant of the Thorne Type-Setting Machine Co. in Chicago. The typographical union had never fixed a scale for this machine, and for that reason the plant was run outside the union. Since the attention of the company, however, has been called to the matter they

have made application for admission to the union which has been favorably received, as will be seen from the following letter from the president of the typographical union, given out by him at 3 P. M. to-day:

*To Whom it May Concern :*

The firm of Charles H. Kerr & Co., publishers, having promised to unionize their printing office under the auspices of Chicago Typographical Union No. 16, as soon as possible, the undersigned would recommend that cognizance hereof should be had by all friends of organized labor, and patronage be accorded them, especially as regards Rev. W. H. Carwardine's book, "The Pullman Strike."

Fraternally,

JAMES GRIFFON,  
President C. T. U. No. 16.

I trust you will be willing to publish this letter in order to correct the false impression which has been made on many good union men. It must be evident to all that nothing would suit the Pullman Co. better than to have Mr. Carwardine's little book suppressed, while its wide circulation can not fail to benefit the cause of labor everywhere.

Yours fraternally,

*John T. Ridge,*

Gen'l. Agt., 175 Monroe St.

CHICAGO, Sept. 5, 1894.

### "Striking for Life."

This is the title of John Swinton's great book on the recent great strike. It is not necessary to say that John Swinton is pre-eminently the author for such a work, and those who have been privileged to examine its pages enthusiastically declare that the old veteran has in all regards been equal to himself. The style is clear, graphic, almost startling in the vividness of its portrayal of the exciting events that marked the progress of the great contest. The labor world on both sides of the Atlantic will be interested in what John Swinton has to say on this all important subject. His noble heart has always been with the lowly and down-trodden and it is not difficult to guess what are the distinguishing features of his reflections and conclusions. All his self-sacrificing life he has pleaded the cause of the masses, scorning wealth, disdaining the edicts of society, refusing to be bribed by position. His large brain and tender heart in holy alliance, John Swinton stands to-day the patron saint of the working poor and has the genuine gratitude and affection of more of *Les Misérables* than any man in America.

Every workingman, every student of social science, should read John Swinton's "Striking for Life." The book is truly great. It is an arsenal of fact and logic and for purposes of reference absolutely invaluable. Send to A. H. Keller & Co., Publishers, Philadelphia, Pa., for a prospectus. The advertisement of the book appears elsewhere.

### The Captain's Visitor.

During the summer of 1868, being in the service of the United States, I was stationed at Fort Wallace, Kan. In those days the arrival of the overland mail coach was an event of some importance, and those of us who were off duty used to be on hand at the post trading store to welcome it, and incidentally to note the number of bullet holes made in it since the last trip.

(One morning there got off the coach from the west a tall, middle-aged man, wearing a broad slouch hat, a long linen duster, and a pair of cavalry boots, into which his trousers were carelessly stuck. Seeing my comrade and me in close proximity, he approached, and we, recognizing him, gave a military salute, which he gracefully returned.

He inquired who was in command of the garrison. I answered:

"Capt. B—— is temporarily in command in the absence of Col. ——."

He desired to be directed to Col. ——'s quarters. We pointed out the house. Then I returned to the office where I was on duty as clerk.

Capt. B—— was a pompous martinet who had never smelled powder in his life, and was detested by both officers and men. In due time he arrived, and having noticed the tall man, he called to his orderly:

"Orderly, go and ask that man sitting in front of Col. ——'s quarters whether he is an officer."

The orderly returned with an answer in the affirmative.

Said Capt. B——: "Give my compliments to that officer and say that I desire his presence at headquarters."

The orderly did so.

Shortly after the tall man entered. Capt. B——, looking quite stern, asked:

"Sir, are you an officer of the army?"

"I am."

"To what branch of the service do you belong?"

"Not to any particular branch at present."

"On what duty are you?"

"Well, I have been traveling a little, lately, through the west."

"Are you on leave of absence?"

"Not exactly."

"Well, sir, did it not strike you that it was your duty to report to these headquarters immediately on your arrival in the garrison?"

The tall man admitted that it had not struck him; in fact, he was tired and hungry and thought more of breakfast and a little rest than anything else.

Said Capt. B——: "Well, sir, that is no excuse for a breach of military etiquette. We keep here a book in which we require all officers entering the garrison to register.

Orderly, hand the register to the officer. You will be good enough to write your name, rank and regiment, with such remarks as will be necessary."

The gentleman leisurely took the pen and quietly wrote:

"William T. Sherman, lieutenant general, United States army."—*Chicago Record*.

### The Lawyer's Bad Break.

"It is well for a speaker to know where his peroration is going to end when he begins," said E. H. Harper of Denver. "I heard a young lawyer make his maiden speech. It was in defense of a fellow who was about half-witted, arrested on the charge of stealing a hog, the young attorney having been appointed by the court. His defense was that his client was an idiot and unable to distinguish between right and wrong. He closed a flowing speech with a peroration like this:

"Gentlemen of the jury, look at my client. That low, receding forehead, those lusterless eyes, portend that he was deprived by nature of the power to distinguish right from wrong, ignorant of the distinction which exists between his own property and that of others. To him, as to the two-year old child, whatever he wants and can reach belongs to him. He knows neither why it does nor why it does not. But, gentlemen of the jury, such are the institutions of this, our free and glorious country, that my client, idiot though he is, stands for a trial to-day by a jury of his peers." The culprit got the full limit of the law."—*St. Louis Globe Democrat*.

### A Huge Empire.

Millions of acres of land are lying idle in western Kansas and Nebraska, in Colorado, Wyoming, Utah, Nevada, Idaho, Montana, Arizona, New Mexico and California, wanting only the magic touch of water to make them bloom into a flower garden, and yet producing nothing but lean coyotes, sun-logs and scenery. One million acres of arid, worth \$1.25 per acre, or \$1,250,000, if watered, would bring \$11,250,000. According to the estimates of Maj. Powell, there are 1,000,000 square miles of these lands which need only water to render them productive. Special Agent Hinton estimates that there are 17,000,000 acres of arid lands which the general government could and should reclaim.

If we add 17,000,000 acres to our cultivated domain we shall increase our capacity for supporting a farming population as much as though we had absorbed one-third of the cultivated land in the United Kingdom, or one-fifth of that of France, or one fourth that of Germany, or all the cultivated land of Sweden, Norway and Greece, put to-

gether. We can annex a Canada of our own without asking anybody's leave, and have a million acres to spare. We can have within our own borders as much cultivable land, in addition to our present 208,000,000 acres, as Australia and Holland combined have under cultivation.—*Cy. Warman in McClure's Magazine*.

### A Song Worth Thousands.

"The Poet of the Rockies," Mr. Cy Warman, is responsible for "Sweet Marie." Mr. Warman likes "Sweet Marie." One reason for his fondness is that he made \$2,667 in royalties between January and July, and expects his receipts for the three months ending with September to be over \$2,000 more.

Mrs. Warman is in a measure as responsible to the public for "Sweet Marie" as her husband is. She inspired the song. Her name is Marie; and they have been married only a couple of years, which accounts for "Sweet Marie" perfectly.

Mr. Warman has not always been a poet, although he is now making thousands of dollars from a successful song and has already made a reputation. He went to Colorado in 1880, when he was twenty-five years old, and began work on the Denver & Rio Grande railroad as a fireman. His train ran through the famous Marshall Pass, and he attributes his subsequent career as a poet to the inspiration of the scenery in the Rockies. "I couldn't help writing poetry with such scenery as that to run my engine through," he says.—*Exchange*.

### "The Pullman Strike."

This valuable and interesting book by the Rev. W. H. Carwardine should be read by every man who is interested in the labor question. It contains 136 pages of solid matter in relation to the origin and progress of the great Pullman strike. Mr. Carwardine is pastor of the First M. E. church in Pullman, has been a close student of men and conditions there, and no one is better qualified to fairly, impartially and accurately relate the facts that led up to the greatest strike of the world and the main features of that great conflict until its close.

To get the truth, clearly and concisely, send 25 cents for a copy of the "Pullman Strike" to Chas. H. Kerr & Co., Publishers, 175 Monroe street, Chicago, Ill.

### Special Notice.

FOUND.—A gold B. L. F. ring, marked with the initials M. J. B. 1892 on inside. It was found on a negro who was arrested and is believed to have been stolen. Policeman J. C. Kennedy has the ring, from whom the owner can get it on describing same.

### Address Wanted.

DELL E. DAVIDSON is requested to send his address to his sister, Lillian A. Davidson, 800 Fourth avenue, south, Minneapolis, Minn.

Balance on hand September 1, 1894 . . . . . \$38,993.58

Respectfully submitted,  
F. W. ARNOLD, G. S. and T.

## Rather Absent Minded.

Mrs. Sarah Grand, the novelist, is one of those known as "absent minded." One day a visitor found her with a big awkward volume on her knee, heated, excited and evidently put out.

"Is anything the matter?" asked the visitor  
"Oh, yes," she answered, "I've lost my pen and I'm trying to catch the post."

"Why, where are you looking for it?"  
She glanced at the visitor and then at the book.  
"—I believe I was looking for it among the pages of the Dictionary."—*Youth's Companion.*

# Marks' Patent Artificial Limbs

## WITH RUBBER HANDS and FEET

NATURAL IN ACTION, NOISELESS IN MOTION AND THE MOST DURABLE IN CONSTRUCTION.

Over 15,000 in use, scattered in all parts of the world. Eminent surgeons and competent men commend the Rubber Foot and Hand for their many advantages. At every industrial exhibition where exhibited they have received the highest awards. They are made and purchased by the U. S. and foreign governments. A treatise, containing 430 pages, with 300 illustrations, sent FREE; also a plan for taking measurements, by which they can be made and sent to all parts of the world with fit guaranteed.

To A. A. MARKS:

DEAR SIR: I was a professional tight rope walker and aeronaut before I lost my leg, and I do not allow the loss of a leg to compel me to seek another occupation. With your patent artificial leg I can walk a tight rope nearly as well as I ever could. The rubber foot enables me to balance with safety. The absence of an ankle joint removes the risk of falling to a large degree.

While walking on the ground I never feel the necessity of looking for uneven or bad places. I feel safe and sure on my rubber foot, no matter where I place it. I consider your invention of the rubber foot the most valuable and important to persons who have lost their natural limbs than any invention that has been made.

If any person doubts my ability to walk on a tight rope with an artificial leg applied, I will wager \$100.00 with them that I can perform for 30 minutes on a one and one-half inch rope elevated fifty feet above the ground.

Respy yours, PROF. F. E. JACOBY,  
157 Bank St., Waterbury, Conn.

RECEIVED THE HIGHEST AWARD AT  
WORLD'S COLUMBIAN EXPOSITION.

ADDRESS

A. A. MARKS,  
701 Broadway, N. Y. City.

STIFFNESS, SWELLINGS, BACKACHE, NEURALGIA,  
SCIATICA AND RHEUMATISM.**

**"PULL YOUR LEG"**

Is less to fear with Railroad men than to Lose Your Leg. In the latter case you surely want to replace it with a **Patent Adjustable Slip Socket**. *Warranted not to chafe the stump.* Received the Gold Medal and the Diploma at the World's Fair. Also Gold Medal, Bronze Medal and Diploma at the California Mid-Winter International Exposition.

**LARGEST FIRM IN THE UNITED STATES.**

The Inner Socket, seen outside the limb in cut, is made over a plaster cast of the stump, giving an exact fit, being held permanently upon the stump by elastic fastened to lacer above, and in act of walking moves up and down in the **outer socket**, bringing all the friction between the two sockets instead of between the stump and the socket as in the case of all wooden socket limbs. With our **SLIP SOCKET** the most tender, sensitive stump can be fitted and limb worn with perfect ease and comfort. Endorsed and purchased by the United States Government. Send for our new catalogue with illustrations.

---

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the out-puts have increased over 1,200 per cent. beyond all precedent, amounting during 1892 to 3,000,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

## PUBLIC OPINION.

BY WILFRED P. BORLAND.

What is this thing we call "public opinion?" It is one of the many idols at whose shrine poor humanity bows down in superstitious and craven worship; one of the numerous devices for securing the plasticity of the multitude, that it may be moulded to the will of a few scheming individuals, and thus be made the instrument for its own enslavement; one of the almost numberless artifices for suppressing the ego in man and compelling the individual to lose sight of his personality, to sink his individuality in the wild chaos of the unreasoning mob.

Public opinion! It is one of the greatest frauds and humbugs of this age—this age which is pre-eminently an age of frauds and humbugs. Providing only that it is conventional, any sort of a sentiment, any custom, usage or law, though it may be as revolting as hell to the individuals' moral sense and utterly inconsistent with the beliefs and aspirations of nine persons out of ten, straightway receives the approval of public opinion, becomes stamped with the conventional brand, and men bow down and worship it, submit their actions and their words to be measured by this rule on pain of ostracism, contempt, and perhaps persecution if they do not.

Society—that is, the few who control and direct the social and industrial activities of the multitude—imagines itself burdened with the supreme duty of protecting and preserving itself, with all its rottenness and injustice unabated, and public opinion is one of the instruments, not the least powerful, which it has manufactured for accomplishing its purpose. This society is like a furnace which must be kept at a white heat in order to accomplish its work; human souls and human bodies constitute the material which feeds it, and public opinion furnishes the fuel. A so-called *savant*, a

reputed wise man, who is in the service of and supported by this society, utters a sentiment; peurile it may be, and as false as the tales of Munchausen, but straightway it is taken up, stamped with the proper brand, toggled out in the proper finery, set on high, called public opinion, and received and worshiped as the calm and deliberate judgment of millions of people! Public opinion is manufactured to order. Whenever society is in need of more fuel for its furnace, whenever it wishes to perpetrate a fresh crime against the multitude, sink a few more individuals in the maelstrom of its iniquities, it sets its agents to work to manufacture public opinion in favor of its schemes, and on the high tide of that manufactured sentiment it rides safely into the desired haven, casts anchor, and straightway the chains of slavery are riveted upon another contingent of human individuals, another quota of human souls and bodies are captured and sacrificed to keep up the white heat of society's furnace of hell.

And it is to the ebbing and flowing of this manufactured sentiment that we are told our reforms must be subordinated. We are told that no measure, however much its effect may be to benefit the people at large, can hope to succeed against the dictates of public opinion; no reform can be carried out when public opinion is against it. There would be some ground for having patience with those who prate so learnedly about the power of public opinion if it could be shown that it is really public opinion they are talking about; if it was not known that what they denominate public opinion is really nothing more than the private opinion, or, rather, a subtle expression of private preferences or will of a few individuals who seek to mould the actions of the multitude so as to confer supposed benefits and advantages upon themselves.

Mankind is like a flock of sheep who follow the bell-wether wherever he may chance to lead. The bell-wether may be

presumed to know where he is going and what he is going for; but the balance of the flock know nothing; it simply follows blindly wherever it is lead, although it may possibly be to certain destruction, and when it has come to a stop there is not one of the flock who could give any reason for being where they are other than that the bell-wether led them, and chances to be there also. This is sheep nature. It seems to be, also, human nature; it is taken advantage of for the manufacture of public opinion, and the fiction lies in regarding each and every one of the human flock as a bell-wether and assuming that he is where he is by his own volition. To say, as we do, that this country is ruled and our institutions supported by public opinion, that is, after the manner of the real wishes and the deliberate judgment and preference of a majority of our people, is one of the baldest fictions that can be imagined. The real public opinion of this country is against special privileges; against class laws of all description; against the using of the power of the government for the purpose of conferring benefits and advantages on any person or set of persons which are not enjoyed by all persons alike. There are none who have the temerity to defend special privilege considered by itself; even those who profit by privileges granted by the government dare not come out boldly and defend their privileges on their merits; whatever defense they have to make whenever their fictitious advantages are assailed is made on utilitarian grounds, and never on the ground that they are justly entitled to them; the abolition of privilege is the campaign stock in trade of political orators of all parties, and it is stock that sells well in any kind of a crowd. Yet never was there a more privilege-cursed country on the face of the earth than is the United States, and our whole fabric of law is erected to sustain and perpetuate privilege.

How does it come that this public opinion against the rightfulness of privilege does not receive adequate expression in our laws? How does it come that this public opinion which we are told all things must bow down to, and which so many persons pretend to worship, which we are told is the political and social barometer of the country, is so powerless to get rid of privileged classes in our republic? It comes about because our talk about the power of public opinion is mere nonsense. It comes about because it is not public, but private opinion that controls our legislation and receives expression in our laws. Not one person in a hundred, ay, not one in a thousand has any power of independent thought; the 99 or the 999 merely follow the bell-wethers wherever they may chance to lead, and it is only necessary to hang the bells

on the proper sort of wethers and there you have your public opinion, there you have your mob going any way you wish them to go. It is a very pleasant fiction to say that they are following public opinion.

One of these bell-wethers who got his bell from the privileged classes, and who, therefore, is one of the shining apostles of freedom, Mr. Edward Atkinson is the first two letters of his name, has lately been telling the British Association something about public opinion in America concerning the money question. Atkinson talks well. That is to say, he talks fluently and easily—which is not to be wondered at, seeing that he hasn't much to do except talk—and he is the recognized American authority on codfish, soup-bones, beans, and—liberty. Atkinson fairly dotes on liberty; the twenty-four hour day is too short in which for him to tell all of his overmastering love for freedom and for humanity at large; he loves his fellowmen, but his love is tempered by the thought expressed in that line of Pope's:

"What dust we dote on, when 'tis man we love!"

and he is not particularly in love with dust. However, Atkinson recently read a paper before the British Association, illustrated by diagrams, on "The evil effect of raising prices by depreciating the standard of value." Considerable of a tale might be told about "The evil effect of lowering prices by appreciating the standard of value," and it wouldn't have needed any diagrams to illustrate it, either, but that is not in Atkinson's line of business. But, after telling the British Association what a wonderful nation this is; how we are "smothered in the abundance of our own products;" "burdened with an excess of all the necessities of life;" and that in spite of all this we have the paradox in our midst that "want exists in the midst of plenty," and then that other fact, which cannot be considered as exactly paradoxical, that "incapacity rules the halls of congress;" after telling them that "the safety of the country has rested for the time being upon the courage of the executive officers of the nation, who have justified the confidence which has so fully been reposed in them," he ventured the assertion that "Public opinion is becoming enlightened, so that the end of this purely political and non-commercial crisis can be foreseen at an early day."

That the present crisis is a "purely political and non-commercial" one will be news to many who have thought otherwise; but it must be understood that this is the dictum of those who manufacture public opinion, and that is the way it will be set down. However, Atkinson stated a bit of real news, which even manufactured public opinion will find it hard work to

propagate and nurse into a semblance of reality, when he told the British Association that "being now the only machine-using nation of the world that is or might be absolutely self-sustaining—producing an excess of food, of fuel, of phosphates and of iron and copper far beyond our wants—we are now the creditor nation, especially of Europe, in our annual commerce."

With nearly forty billions of debt resting on the shoulders of this people, a sum which can never be paid while the sun shines, under the present industrial and financial system, it is highly interesting to know that we are to be regarded henceforth as a "creditor nation," and there is, indeed, some reason to believe that the members of the British Association quietly laughed at Mr. Atkinson when he advanced that idea, and set him down as a consummate ass. But it will be supported by the factitious public opinion which alone has weight to dictate our forms of governmental policy, because it was advanced to sustain the conclusions: "It is, therefore, very certain that we shall maintain the surest and safest monetary unit." By which is meant the gold standard.

"With few exceptions," says Atkinson, "we concur in the definition of good money—namely, quoting from memory—"that only is good money which is worth as much after it is melted as it purports to be worth in coin." I fancy the few exceptions who fail to concur in receiving this definition of good money will far outnumber those who may be included in Mr. Atkinson's rule, but it is the opinion of the smaller number that has thus far been taken as the authoritative index of the wishes of the whole; this it is which has been deferred to by our legislators in shaping financial legislation; this it is that has been denominated public opinion.

Mr. Atkinson further told the British Association that "the cheap money craze has about spent itself." "We have," said he, "over 4,500,000 freehold farmers, by far the greater part of whom have no incumbrance on their lands. They are now conscious that they hold the true political power, and are slowly but surely preparing to exert it. As they are the great creditor class of a great creditor nation, it is not probable that they will much longer tolerate uncertainty and confusion in our financial legislation, and to them, at least, duality in a unit of value is unthinkable!" It will no doubt be encouraging to those 4,500,000 freehold farmers to learn that they are "the great creditor class of a great creditor nation." It may also be something of a surprise to them, but as they constitute less than one-half the total number of farm families in the country, and as during the decade from 1880 to

1890 the farm mortgage debt increased 65 per cent., while the number of tenant farmers increased 64 per cent., and all the while we were getting rid of that "duality in our unit of value" which Atkinson thinks is the cause of "confusion and uncertainty," they may not be able to derive as much satisfaction from their position as creditors as will the creditors composing the British Association. These farmers to whom "duality in a unit of value is unthinkable" are the very ones who are credited with starting this "cheap money craze," and the craze has by no means spent itself—the platforms of all political parties in at least nine-tenths of the states and congressional districts of the country are made up with the view of pandering to this "cheap money craze," and catching the votes of those to whom "duality in a unit of value" is not "unthinkable," that is to say, they declare in favor of silver as a money metal, and against the exclusive gold standard, although sometimes in equivocal terms, which is the "duality" that Atkinson says is "unthinkable"—and should the real public opinion of the country receive adequate expression in the coming elections I imagine the British Association may come to the conclusion that Mr. Edward Atkinson has been telling them a pack of lies.

When we contemplate the fact that there was a 236 per cent. increase in the urban mortgage indebtedness, and a 212 per cent. increase in the number of urban tenant families during the period covered by the eleventh census, we may certainly say that it is not a good showing for the gold basis for which Atkinson so confidently tells the British association American public opinion is favorable. I imagine that American public opinion is far from approving conditions of that sort, or from defending any of the institutions that have had any influence in bringing the conditions upon us. But it is the private opinion of the few bankers and capitalists that is called public opinion, and in obedience to tradition, accepting the fiction as fact, our legislators proceed to enact this private opinion into law and then justify their iniquities, their crimes committed against the American people, by the plea that they were carrying out the wishes of the people as expressed by the general public opinion. It is one of the greatest of the many great farces which are continually being enacted for the delectation of the American wealth producers whilst their pockets are being picked under the forms of law.

As an instance of the way in which public opinion is manufactured, look at the agitation for the repeal of the Sherman silver law. That law did no harm, but much good, by furnishing to the people a few

millions of money which they would not have been able to obtain otherwise; it increased the volume of our circulating medium by the addition of \$148,000,000 of legal tender money during a period when all authorities agreed that we needed more money; the treasury notes issued under authority of the law were absolutely required to aid in transacting the business of the country, and that fact was really all that was accomplished by the law. But the law was inimical to the interests of the English bondholders who hold a mortgage on this country, this "great creditor nation," and their American agents, the bankers; it interfered somewhat with their plans of spoliation, and, therefore, the edict went forth that it must be repealed.

But how should that be done in the presence of that "increasing sentiment in favor of government legal tender notes and silver coinage," mentioned in the panic bulletin issued by the bankers' association in March, 1893? Simply by manufacturing an opposing sentiment for the time being. The plan was outlined in the circular referred to, as follows: "Be careful to make a money stringency felt among your patrons, especially among influential business men. Advocate an extra session of congress for the repeal of the purchase clause of the Sherman law, and act with the other banks of your city in securing a large petition to congress for its unconditional repeal, per accompanying form. Use personal influence with congressmen, and particularly let your wishes be known to your senators." This plan was carried out; the Sherman law was denounced as vicious. It was charged by the bankers and the press of London and New York that the financial condition of the United States was precarious; that the money issued by the government was a depreciated currency, and that there was danger of a collapse. This cry was taken up and echoed and re-echoed by the press in every commercial city in the country until the people really began to believe it. People feared, they knew not what—this was the lack of confidence the banks had been working for—and under the influence of the clamor of the press people who had never even heard of the Sherman law, or if they had heard of it had never given it a moment's thought, and who couldn't tell the difference between it and the differential calculus, began to talk learnedly of the evil effects of the Sherman law, and joined in the clamor for its repeal. They were merely following the bell-wethers.

It was said, and repeated, and reiterated to tire-someness, that all the country was suffering from was lack of confidence, and that the one thing needed to restore confidence was the repeal of the Sherman law; therefore, the Sherman law must be

repealed at once. Boards of trade and business men's associations throughout the country passed resolutions denunciatory of the law and calling for its repeal; men who had never before known what an awful monster the law was began to discuss its terrible effect upon the industries of the country. Ignorance, with the seriousness and owlish gravity that ignorance always assumes when dressed in the garb of knowledge, was ready with its opinions; opinions stolen from the bell-wethers of the human flock, but which ignorance calmly retailed as its own personal property; and when the agitation had brought the people to the proper point that they were willing to submit to anything which promised relief, an extra session of congress was called, and in spite of the stubborn fight made by the few clear heads and honest hearts in our national legislature the law was repealed, and the wishes of the bankers and bondholders accomplished under the name of public opinion.

The repeal was to restore confidence and put an end to the hard times; the farmers were assured that they would get better prices for their wheat; it was confidently asserted that wheat would never rise in price until the law was got out of the way. Although we may be thankful that confidence was restored, we have the hard times with us still, which is nothing to be thankful for, and the price of the farmer's wheat dropped three cents a bushel within three days after the repeal of the law, and it has been dropping steadily ever since. During the discussion of this measure in the senate, Senator Stewart, after presenting a resolution from a Knights of Labor Assembly in Columbus, Ohio, in favor of silver coinage and the government issue of money, said: "Now, when the gold people are talking about public sentiment I defy them to present a petition from any labor organization in the United States. They have not been heard from through these papers. But one class has been heard from, that is the money class and its dependents." And it is the wishes of this class that passes for public opinion and to which our legislators defer.

Instances might be multiplied to show the manner in which public opinion is manufactured for the purpose of using it so as to enslave workingmen, to create sanctions for measures which involve the robbery of the masses and the violation of the rights of the wealthproducers, but it is needless to do so, as we all are able to call them to mind. Why, then, should workingmen longer submit to square their actions to the rule of this manufactured sentiment? Why trim their sails so as to catch the favoring breezes of this small class-sentiment, and submit to the dictum that their reforms can

be no otherwise brought about? Why longer endorse the lie that measures for their benefit must wait for the approval of public opinion before they can hope to succeed? Why not, rather, face the fact in all its reality, learn to know the fact as it exists, that any measure in the interests of workmen, of the wealth producing masses, any measure in the interests of human liberty, will always be opposed by public opinion, and if it hopes to succeed it must be pushed squarely against that opinion and backed up and sustained by the united power of the workmen until it overrides it and breaks it down? If workmen hope to gain any advantages through the power of public opinion they will find their hope always blasted, never arriving at fruition. They will find public opinion always against them, because the machinery for its manufacture is all in the hands of their enemies. Then let them ignore public opinion. Let them so use their power as to put men in congress who will surely do something in opposition to so-called public opinion, and see if it will not surely do them some good. If they are bound by the limitations of human nature to follow bell-wethers, let them select their wethers from out of their own flock; and for the good of humanity let them pitch public opinion to—Hell.

### THE JUDICIARY IN GOVERNMENTAL FUNCTIONS.

BY JOSÉ GROS.

Can anybody give us any good reason, based on historical facts, for government to be a machine with three wheels—the legislative, the executive and the judiciary—and not simply with two by dropping the last one? Our conservative friends, with that admirable complacency of theirs, for the creations of their own fancies, will point to our wonderful development as a nation, and to that great prosperity of ours, transcending the dreams of poetry and prose from time immemorial. We have certainly prospered in figures representing population and wealth. But what of that? Shall we forever be fascinated with prosperity without equity, without mental peace? Palaces here, fine and grand, with wretched tenement districts over large sections in all our cities; respectable people in choice spots, vice and squalor in vaster and more extensive portions of the same centers of population! Even among the relatively pretty streets of cities, towns and villages over the land, those fine people that are constantly singing that prosperity song of ours, even there they can find trouble enough, hardly anything else but anxieties for the to-morrow or the day after. And this happens, not only now and then, under the distress of our occasional com-

mercial and industrial paroxysms, but all along, even if less pronounced, among eighty-five per cent. of the population at least. The writer has seen such a condition even with the relatively at ease, all along, for over thirty-five years, in the most flourishing sections of this nation. We doubt if, below the three per cent. on top, you can ever find absence of anxieties from fears of poverty. And still a few maniacs are always ready to howl about our prosperity!

Even Huxley, the English scientist, fatalistic as he is, and unwilling to expect that humanity can ever be better than we have made it so far, even he declares that for ninety per cent. of the people in the richest nations life is but a question of slow starvation. He could have called it ninety-five per cent. without any great exaggeration on the subject. He has added that if he had to choose between the lowest life of the lowest savage, as he has seen it in his travels, and other travelers have stated, and the life that civilization imposes upon many, he would prefer the former, that of the savage.

The superb self conceit with which we are apt to now and then imagine that we have solved pretty nearly all national problems, simply because we have managed to go through 110 years of national existence without going to pieces, when other nations have kept themselves alive, and very much so, through twenty or thirty centuries, although less advantageously situated than ourselves.

Have we not developed and intensified in about a single century all the evils of humanity in forty centuries? We may have modified the form of some of the old evils, but the essence remains. And here we are, on the brim of a military despotism besides that of a judiciary, which seems to be hungry and thirsty after the annihilation of the few natural rights we thought we had acquired never to be lost.

Many of those who attack and deplore the evils of to-day are apt to imagine that they are the product of the blunders of our own generation. We don't believe in sanctifying any of the old generations any more than our own. There is no logic in that. It has been one of the greatest mistakes of humanity the worshipping of our own ancestors. With the old Greeks, their ancestors were the gods of Olympus. Some feeling of the kind has always prevailed even on this side of the Atlantic, and has been fatal to us.

Suppose that we try to be frank with ourselves, and boldly trace our present evils to what we may call our five capital national sins. They are as follows:

Taxation in the most unjust forms possible.

Monetary systems vile in the extreme.

Banking methods adapted to gambling hells.

Class legislation of the most criminal kind.

Land monopoly, land robbery, carried to the most gigantic degree imaginable.

By the last sin alone we have, in a solitary century, given to 200,000 families the patrimony that God meant for one billion of people and their unborn generations.

We are willing to saddle our own generation with the responsibility of having considerably intensified our above five capital sins. Yet, we challenge anybody to disprove that their essence has not always been among us, or that they have not constituted the germs out of which we have developed all our national diseases. And how can we suppress any of our present evils unless we see the causes to which they are due, far back, directly or indirectly sanctioned by the very laws forever at the root of our social structure?

Look now at the naked fact that behind that set of laws of our own, to which we must necessarily owe our own national troubles, we have a magnificent judiciary, virtually clothed with omnipotent power. Is it wise to have a lot of fine judges who can play the pope without living in the vatican, that palace in the eternal city, that Rome, the capitol of Italy? Who can give us a plain answer to that plain question? Can you tell us what becomes of popular government and real freedom when five or six men, ten or fifty, are allowed to read our own laws the way they like? Is not that an emphatic assertion that the people cannot be trusted to do their own thinking, and cannot cancel any law they may find unsatisfactory, to be replaced by another one? Or is human language incapable of formulating plain thoughts, appealing to the plain sense of the average man? If so, why have any public or private schools where men may learn how to reason correctly on the fundamentals of human existence, in the life they have to live? Is not language a divine gift to men, for them to understand each other in all that may be conducive to their welfare and manhood on the face of the earth?

Don't you see that we really relegate most men, and even God himself into the limbo of fools, when we give to a few judges the power to say: the laws you made don't read the way you want them to read; or they don't mean what you wanted them to mean. Why should any number of judges know what we mean by this or that law; by this or that constitution, fixing certain limits to certain laws, when it is we, the people, who suffer when laws or constitutions are wrong, and have the greatest interest in changing them?

The above questions may invite the squealing of a pack of old uncles saying: But don't you see that the laws are not made by the people, but by the legislators that the people elect for that object? Yes, we know all about it. The people elect over 3,000 men to make our state laws, and over 300 men to make our national laws. We don't really see how that improves the situation. The situation means that the people have not even brains enough to elect men that can be trusted to do what the people may need or what the people may wish them to do. The situation means that a majority of five or six men, in a bench of judges, shall say what a majority of 50 or 100 or more in legislative bodies meant or should mean in the laws they passed for the real or apparent purpose of fulfilling their engagements toward the men who elected them to make their own laws. That kills all responsibility on the part of the men we elect. That converts popular freedom into a clean farce, and our representatives into puppets.

Whether truth and men come from a conscious power called God, or from unconscious nature, in either case they must be intimately interlinked, men and the truth by which they are to live or perish, enjoy or suffer. If so, language must be able to express truth in forms easily apprehended by most men, and the latter should then be able to formulate laws that could have but one plain, simple meaning. A judiciary for the purpose of interpreting laws or constitutions is nothing but an emphatic repudiation of a logical creator, or that of a humanity with plain common sense. That judiciary of ours virtually asserts that men were never born to be free, never born to understand truth, outside of a few judges, in favor of whom we abdicate all discriminating powers between truth and error, between right and wrong in the life of our own nation.

That millions of supposed free men should need to place a few judges, nothing but lawyers after all, on the very top of states and nation, for a number of years or for life, with fat salaries, compared with the mean earnings of most honest workers; to be clothed with a fanciful infallibility about human laws, when the few men in question are just as fallible as every one of us, even if they have been in college, and perhaps more fallible on that account! Is not that just as childish and idiotic, just as illogical and unnatural as possible?

We can only see a reasonable explanation for the existence of a judiciary in governmental functions. It is that eternal fear that the wise men of all periods have had lest they are swept off the face of the earth by the excesses of the ignorant. The latter, with the ballot in their hands, may

become extremely dangerous, they may even force wrong laws through the delegated legislative bodies they can influence. Hence the need of a few men, back of those legislative bodies, to whom we, the wise fellows, may resort, when necessary, to have such and such laws declared unconstitutional, or to have them read so and so; just what we, the wise chaps, consider it best for the preservation of these laws of monopoly without which everybody would eventually possess as much wealth and knowledge as every one of us; when none of us could lord it over the rest! And how dreadful that would be!

In spite of all the above, the people should respect (?) and obey their own creations, and hence the judiciary in question, no matter how inconvenient that may turn out to be. Grant that what we call the creations of the people are but indirectly so, the result of the few forever cheating the many into making them believe that white is black and black is white. All the same, we, the people, must always give good example to the wise, as long as we have any process at all through which to peacefully and orderly improve civilization.

Our previous analysis has but one object, that of letting the people trace effects to causes. That alone can teach them how to permanently suppress the evils with which all nations have forever been afflicted. A single, solitary word embodies all those evils. That word is—monopoly. Our judiciary is nothing but the incarnation of intellectual monopoly, a few minds declaring the truth about this or that law. That most necessarily prove fatal to all real freedom. That negatives the manhood of the millions who are forced to live under the laws in question. We can make another set, but what is the use? Our judiciary may see fit to read them in the way we never meant they should read. We are nothing, then, but a pack of serfs.

We emphatically assert that the judiciary in governmental functions must be swept out of existence by the sovereign people, through the ballot, if we want to ever be a nation of free men, with capacity to read our own laws, and hence with the spirit of self government.

We shall be glad to recede from our position if our analysis can be proved incorrect, and our conclusions incompatible with a much better civilization than any so far.

## KINDERGARTEN ECONOMICS.

BY W. H. STUART.

When "Progress and Poverty" appeared, some fourteen years ago, it was eagerly read by thousands who had previously never given social or economic problems a thought. The study of political economy was, at that time, confined to a few professors of that

science scattered in various colleges and universities throughout the country. Those professors were, and are yet, the paid apologists of a system that enables the few sharp, cunning, able and unscrupulous members of society to live luxuriously on the ignorance and credulity of the great mass of the producers. This system of exploitation is made possible by the division of society into two classes, viz.: those who own and control the means of production—land and capital—and those who, being divorced from the means whereby an independent living could be made, were compelled to sell their labor power under competition with their fellows to the capitalists, the monopolizers of the "means of production."

"Progress and Poverty" was written to prove that the private ownership of land was the sufficient cause for the great and unequal distribution of wealth. All poverty was traced to that cause. It was argued with great plausibility that the concentration and increase of population merely served to add to the value of the land where such increase and concentration occurred; that the enormous increase in productive power of labor by co operation in production, and by the aid of labor-saving machinery, merely added to the value of land; that those who owned and controlled the land were enabled to absorb in the increase in its value, the "unearned increment," or in increased "rent" for its use, all the advantages of modern productive processes. It was therefore proposed as a "sovereign remedy," that would abolish poverty, that society should confiscate for public purposes the rental value of the land, irrespective and exclusive of improvements. The theory being that when all had equal access to land upon equal terms that an equilibrium of opportunities would be effected, and labor would receive the entire return it was entitled to as its share in production. It must be here noted that the Georgian theory of economics assumes three factors in production, viz.: land, labor and capital. The first factor, land, being a gift of nature and indispensable for human existence, should not be monopolized by a few to the exclusion of the great majority who had equal rights to its use, but should be the common property of society. But as the value of land greatly varied, either through superior fertility or site value, the users of such land should be forced to pay to the community the value of such superior advantage, in the shape of a tax that would equalize all natural opportunities and place all upon an equal footing. Capital is, according to Henry George, another factor in production, and is entitled to a "return" in the shape of "interest." In this regard he is in entire agreement with the current

and orthodox schools of economics. He does not, however, base his plea for the "wages of capital" on the "abstinence" theory of N. W. Senior, on the contrary he discredits "abstinence" as a factor in production. He justifies "interest" on a novel and somewhat original ground, viz.: that capital invested in certain things, as say sheep, cattle, swine, etc., increase in value as a result of the "element of time" and of the "reproductive forces of nature" that are quite separable and distinct from labor, and he contends that capital invested in other ways in which the element of time and the reproductive forces of nature are not factors, should, by the law of equalization, share in this increase. I have in a former number of this MAGAZINE exposed this fallacy of this justification for interest, and I shall not now discuss the subject. I merely now point out that the theory that capital is entitled to a "return" for its "aid in production" is the basis on which the present robbery of labor is everywhere justified and defended.

This brings us to the other factor in production, viz.: Labor. Labor is entitled, according to the Georgian theory, to all it can make on land at the "margin of production" with the individual tools that can be used by the laborer. All above what can be made on land at the margin of production, i. e., on land of no rental value, will be confiscated by the state in the shape of the single tax, and all the advantage of "capital" as an "aid in production" by the use of the modern tools of production would be confiscated by capitalists in the shape of "interest" for their contribution toward the processes of production.

I have challenged single taxers to dispute this proposition. True, Mr. W. E. Brokaw, editor of the national organ of the single taxers, denied the proposition in his "irruption" into the columns of the June MAGAZINE and challenged me to prove it. I accepted the challenge and asked him to open the columns of his paper, the *Single Tax Courier*, to a discussion, but I have heard nothing further from the valliant Brokaw. While single taxers are everywhere prompt to occupy and use space in the columns of labor papers and magazines for the propogation of their kindergarten ideas of economics, their national organs, neither the *Standard* or *Courier* would or will allow a free discussion in their columns. That is to say, no serious argument against their theory will be discussed. Such trifling objections against their theory as, that the landlord will be able to shift his increased taxes onto the tenant are answered over and over again in one and two column articles *ad nauseum*. By the way, this reminds me that in the same July article Mr. Brokaw charged that I had willfully or ig-

norantly asserted, that in an editorial in the *Standard* Mr. George had defended "Old Hutch" in his famous "corners" on wheat in Chicago a few years ago, that such men were public benefactors, and the promoting of "corners" a legitimate use for capital. The reader will perhaps recollect that I challenged Mr. Brokaw to reproduce the editorial referred to in the columns of the *Courier*; offering, if my statement was not substantially correct to pay for the insertion of the editorial at the usual advertising rates, money to be deposited in advance.

The reader will be surprised and pained to learn that the editorial has not been reproduced in the *Courier* nor have I been called upon for a deposit for that purpose. Comment is unnecessary.

But to return to the single tax theory. With the confiscation of economic rent, and the national or municipal ownership of certain public utilities, which single taxers term "national monopolies," which they are forced to admit could not be left in the hands of private owners to be regulated by free competition.

Then *laissez faire* was to be lord of all, and free competition have undisputed sway.

Here is where the socialist critic shows the utter shallowness of the single tax theory. He points out that the revolution in the form of the modern tools of production, from the small hand tools owned and controlled by the individual and isolated worker, has had the effect of completely divorcing the laborer from his tools as an independent owner.

The socialist shows that the evolution in the form and nature of the tools of production makes it impossible for the isolated and independent worker to any longer control or own them. He points out that while private ownership in the means of production is allowed that they must, by the nature of the case, become the property of a small minority of society, who are enabled to use these tools as a means of oppression, to absorb from labor all above the amount necessary in the form of "wages" to maintain the actual producer according to the standard of living then prevailing. The problem presented by the socialists, why a few should be permitted to monopolize all the advantages obtained by the use of labor saving machinery and by the aid of concentrated capital, is a problem that the single tax intellect appears incapable of grasping.

There are no exceptions, from Henry George down to José Gros, and even Mr. Borland, who has really made a creditable effort to understand the socialist argument, has failed, for, with the usual single tax inability to master the problem, he informs us that he "feels confident that with free

access to land it would be impossible to monopolize machinery." This kind of an answer is repeated over and over again by single tax speakers and writers. The writers in the *Single Tax Courier* continually assert that with the freeing of opportunities by the adoption of the single tax, that wealth could be produced abundantly. Under such conditions, we are assured by W. E. Brokaw, "even savages could produce wealth abundantly." It appears impossible for the single tax intellect to grasp the problem, the result, probably, of an insufficiency of grey matter in the brain or of an extra convolution to bring it up to the standard. When pressed and asked how, with free access to land, men without capital will be able to compete in production with the capitalists, they will ask, as Mr. Borland does, "why they can not produce for themselves instead of for the capitalists?" It is evident that the problem again eludes them.

Let me state the problem in a manner so simple that perhaps the single tax intellect may be able to grasp it. Let us suppose that when this government was formed we had adopted the theory of common ownership of the land under the system proposed by the single tax theory, but that in everything else we demanded private ownership and free competition. Under such conditions of land tenure, with a population of three millions and territory sufficient to support one thousand millions, with private monopolization of unused lands impossible, it is evident that economic rent would be a very trifling tax totally inadequate for public revenue.

At that time every craftsman and workman owned the tools of his trade. They were his individual property by the use of which he made an independent living without being in any way dependent on a "capitalist." The weaver, let us say, owned his own hand loom operated by himself and family and perhaps an apprentice or two. After a while the spinning jenny is invented, followed soon after by the power loom, propelled by steam. Now, one man attending the new machinery can weave as much cloth or cotton in one day as one hundred formerly could. The small hand loom operated by the isolated worker and his family was replaced by the huge factory with the tens of thousands of spindles propelled by a mighty Corliss engine. This factory produces cloth or cotton so cheap that if the old isolated worker was presented with the raw material free he could not sell the product in competition with the capitalist owner of the factory. A thousand isolated hand looms distributed over a large section of country are now concentrated under one roof working for a capitalist who now controls and owns the machinery that employs the thousand men. The old independence

of the laborer is gone; he no longer controls the tools of his trade; if he thinks of abandoning weaving and choosing some other occupation, he finds the same state of things affecting the condition of other workers.

If he tries agriculture or horticulture he finds that small production is impossible as against the capitalistic system, by the aid of immense capital and the use of costly labor-saving machinery. Everywhere he turns he finds that his efforts to compete are futile; free land is all around him in plenty, but the capitalist farmer produces at one-third the cost that he does.

Here single taxers like Mr. B. C. Stickney ask, why if the employment of machinery is so profitable do not all engage in that enterprise and thus grow rich. The answer is simple: Only a certain amount of machinery is necessary to carry on productive purposes, to make more than is necessary would be both waste of labor and of capital. Suppose it requires 100 factories with 500 owners, giving employment to 50,000 laborers, to supply the wants for a certain commodity for our population of 65,000,000. The 500 owners and the 100 factories can supply the market and make a profit, but the addition of 100 more factories would be a useless waste of capital, the mere addition to the number of factories would not increase the output of the particular commodity, nor would it give employment to more laborers, nor in the slightest degree raise wages. The competition of the last hundred factories might drive the first hundred out of business, but the proportion of employers to employees would still remain as five to five hundred. If the two hundred factories consolidated, the rate of employers to employed would raise to 10 as against 500, but the effect of the consolidation would be to decrease the number of workmen required. But as a matter of fact the continual tendency, the result of consolidation and concentration of capital is to diminish the number of employers and also the number of employees, for the weaker capitalists are continually driven to the wall in competition with their stronger and shrewder competitors, while the economy in labor affected by consolidation, and the use of costly and improved labor displacing machinery is continually decreasing the number of workmen required by the capitalists to carry on production. This is what socialists mean when they talk of the "monopoly of machinery," and to say that such monopolization would be impossible under a system that made free access to land possible, exhibits a kindergarten conception of the problem as singular as it is discreditable. By the very nature of the case, the tools of production, under a competitive system, must continue to be owned and operated by a continually diminishing

number of capitalists, while the improved methods of production possible by such concentration and consolidation require also a continually diminishing number of employes.

Another reply made by the kindergarten economists when closely pressed is, that when natural opportunities are free to all that men can go to work for themselves instead of for the capitalist. Certainly they can and produce wealth in abundance. If, for instance, every capitalist in the land should fly off to our neighbor Mars taking all his wealth with him, leaving us simply the land, we could in less than a quarter of a century reproduce every form of wealth now existing. But mark you, if we commenced with common ownership of the land, but retained private ownership of the tools of production we would not only reproduce the wealth, we would also reproduce the present unequal distribution of it. For the ownership of the modern tools of production carries with it the ownership of the wage slaves who are compelled by an economic necessity—their absolute divorce from the tools of production—to sell their labor at the bare cost of maintenance and the reproduction of others to take their places when worn out and discarded by their capitalist masters. So, while it is now possible for a body of men to start life for themselves on free land, yet, unless the machinery of production was also owned in common, they would simply, on a small scale, reproduce the present unequal distribution of wealth.

The very *raison d'être* of socialism is to restore to the worker the tools of his trade. But as the tools of production have, by an economic evolution, entirely changed their form and shape, as it is no longer possible for them to be owned and operated by the isolated worker, socialism declares that the only possible or conceivable solution of the problem is that the workman must own those tools in common. The thousand weavers with their thousand hand looms can no longer compete with the capitalist owner of the factory employing a thousand workmen, who are thereby forced to accept subsistence wages or starve, but the thousand weavers can again gain possession of the tools of their trade by owning the new tools of production contained in the factory in common and be free men. Then instead of producing wealth for an idle capitalist class, who give them back of the product in the shape of "wages" sufficient to maintain a miserable and precarious existence, they will produce wealth for themselves abundantly. Every improvement in productive processes, either by improved machinery or discoveries in science, will enable the workers to increase both the aggregate and individual amount of wealth, or will

enable them to reduce the daily hours of labor, thus giving leisure for cultivating the social, intellectual, moral, and physical qualities and virtues. Every worker who acquires an intelligent grasp of this question is at once a socialist, for he sees at once that through socialism only is the economic emancipation of labor possible or conceivable.

We expect the professors of political economy to defend the present system of exploitation of labor through rent, interest and profits. They are the paid apologists of their capitalist masters, who mainly support and endow the institutions that give them a living, but why should supposed intelligent workers, the victims of this iniquitous system of exploitation and robbery, defend the means by which it is made possible? Why, for instance, should a worker of the supposed intelligence of James Middleton defend "interest" when "the result of a bargain between equals." He supposes the case of a farmer who needs seed corn, potatoes and wheat, but who has not the money to buy with, so he borrows from a neighbor agreeing to return the seed with an added amount as "interest," or the farmer borrows the money for which he pays interest to the lender and pays for his seed with cash. The answer to this proposition is simple and should not be above the comprehension of even a kindergarten economist. It is this: The interest or increase is not a matter that concerns exclusively the principal parties to the contract. As far as they are concerned it may be equally advantageous; it certainly is to the lender, for he receives for the use of his capital "an income without risk and personal exertion," and so far as he does so is a robber of labor. For mark you, all interest, rent and profits come out of the product of labor, and are added and forms part and are constituents in the price of every commodity, for both interest and rent are paid for in the price of every commodity. Therefore, the farmer who pays interest or rent adds it to the price of the commodities he has for sale, and it is paid for by the ultimate consumer of his products, providing that consumer is a producer; if he is not a producer he merely shifts the entire cost, both labor, rent and interest onto the real producer.

Take another illustration: A merchant is engaged in business; he pays \$5,000 per annum in salaries, a like sum as rent, and a similar sum as "interest" for "accommodations" at his local bank. His bargain with the bank is certainly "between equals." He is, in the shape of a profit monger, an active exploiter of labor. In order to exploit labor efficiently he requires a certain amount of capital, and not having sufficient of his own, he agrees

with the passive owner of capital—the banker, to let him share in the “swag” in the shape of “interest.” It is entirely a “bargain between equals.” But the \$15,000 paid out by the merchant as salaries, rent, and interest are added to the cost of the commodities which he sells, and are paid for by the consumer, they form a tax that like all other taxes are paid for directly by the actual producer and consumer, and only indirectly by the merchant.

Mr. Middleton's further defence of interest as based on “natural law” flowing out of the action of the “reproductive forces of nature” and the “element of time,” is a shallow and superficial fallacy which I have exposed in a previous number of this MAGAZINE, and which was also excellently answered by Mr. Geo. C. Ward in the September MAGAZINE.

Here I would like to say a word of caution to those who like Mr. Ward anticipate the great advantage to labor that would ensue by the reduction of interest to say two per cent. I am heartily in favor of the nationalization of money and of banking. It must be remembered, however, that interest on money, or “contract interest,” as economists term it, is a secondary and derivative form of interest and not “interest proper” at all. Interest proper must first be extracted from labor before a dollar of “loan interest” or “rent” can be paid. The difference between the labor cost of commodities, i. e., “wages,” and the ultimate cost of the commodity to the consumer constitutes the fund out of which is paid all interest, rent, profits and taxes, and all the cost of supporting a useless class of middlemen and parasites. If the original exploiters, who, by the way, are not always the chief beneficiaries, are relieved from a part of the tribute they are now compelled to pay the land owner or the passive owner of capital, it by no means follows that the wages of labor would be raised and labor being abundant, the lessened cost of commodities would lessen the cost of subsistence, and under the pressure of free competition, and the “iron law” of wages, “wages” would decrease to correspond to the decrease in the cost of commodities, as the same standard of living could be maintained on the decreased wages. So that it must be understood that temporary palliatives, while they may be defended as steps toward an economic ideal, can of themselves work no permanent benefit to labor while private ownership of the tools of production, and the competitive system are retained.

A word, in conclusion, with Mr. Stickney, who speaks of a “capitalist” as distinguished from a monopolist. This is “kindergarten economics” *par excellence*. He says a capitalist is merely the possessor of

wealth that has been produced by human exertion. If he had added “of others,” the definition would have been exact. This defines a monopolist as a man who by virtue of his control over something that others must use, is able to obtain their services, or their wealth, or both, without rendering a fair return, or, as in the case of a land owner, without rendering any return whatever.

I assure Mr. Stickney this is the exact definition of a “capitalist” who is merely the possessor of wealth produced by others. “A capitalist is (not) therefore broadly distinguished from a monopolist.” On the contrary, they are identical. A capitalist, as such, no more produces capital than a land owner produces land. They are both, equally, the exploiters of labor. Mr. Stickney diagnoses correctly the trend of economic conditions when he says that “when the time comes that nobody but a great capitalist can make a living, there will be no more capitalists of any sort.” Quite true, indeed. “Capitalists” implies the existence of wage slaves who support in idleness the capitalists. But in view of the fact that the national wealth is now owned and controlled by less than three per cent. of the population, does not Mr. Stickney think we are making rapid strides towards a condition of things where the great middle class, the small exploiters, profitmongers and useless middlemen will be wiped out and society divided into two classes, say five per cent. plutocrats and ninety-five per cent. proletarians, men without property, wage slaves. The *dernier ressort* of the single taxer when forced to acknowledge that even under a single tax regime industry can not be prosecuted successfully by a man without capital, is, that with equal access to natural resources, that labor can produce all it is really entitled to claim. If the kindergarten economists are pointed to the success of the bonanza farm in reducing the cost of production, it is replied that the small farmer outnumbers the bonanza farmers, and that under fair conditions the small farmers will always outnumber the bonanza farmers. This is, of course, kindergarten logic. At one time the hand looms outnumbered the power looms thousands to one. What is the proportion now? A few years ago it was possible to predict the failure of capitalist methods in agriculture. The *Standard* and kindergarten economists continually declared that large production in agriculture would never be profitable; that it was a form of industry that could never fall into the hands of the capitalists; that it was the one “haven of refuge” that the independent worker could always resort to when dissatisfied with the wages offered by his capitalist employer. But facts discredit single tax economics and logic. Capitalist methods are as successful in agri-

culture and horticulture as in other industries. The bonanza farm, like the power loom, is here to stay, and the capitalist system is as sure to dominate, in time (and a short time at that), one form of industry as fully as the other. "Kindergarten economics" and "economists" will never solve the problem. The future is in the hands of the socialists. We must substitute for private ownership of the means of production, for free competition and consequent wage slavery, and production for profit, production for use, under a system of fraternal co-operation and common ownership of the sources of wealth and culture—in a word, the co-operative commonwealth.

## THE FOURTEENTH CENTURY.

BY MARIE LOUISE.

In the 1900 years which constitute the existence of our civilization (so called christian), two centuries distinct and apart, are specially remarkable for the important social and political questions which they have grasped and moulded into shape. As one hour, or a minute for that matter, is pregnant with the minute or hour which immediately follows it, so a century is pregnant with the century next to it in the order of succession. The same is true of civilizations:—one is but the offspring of that preceding it and contains within itself the accumulated features and possibilities of its ancestry. Periods of time, therefore, are successive series of analytical terms operating towards the discovery of the great synthetic principle of eternal truth, a discovery which, to all appearance, lies buried in the mysterious bosom of a far reaching futurity.

Among the analytical and experimental processes which operate on the lengthy stretch of ages, some are productive of more important results (beneficial or otherwise) than others. Most remarkable in this category stand the fourteenth and the nineteenth centuries of our civilization. In this article, the great realization and promise of the fourteenth century will be the subject of my dissertation. For the sake of clearness, we will hastily glance over the material which, during 1300 years, gathered and piled up to bear the structure of the 14th century.

The first four centuries of our civilization are characterized by the final disintegration and fall of a gigantic political-military despotism and the upbuilding of a stupendous theocratic despotism. In the 5th century, the barbarians made a decisive attack on the tottering Roman Empire and shattered it. But when they turned towards the christian church which had just completed her solidification, they met a rock which defied the power of their arms.

They swarmed all over western, i.e., civilized Europe, being pushed on and onward by the continual influx of fresh invading hordes. During four centuries they roamed over the land plundering the natives and carrying vast numbers of these as slaves to serve them in their interminable peregrination. Thus the barbarians became the master and the natives became the slaves. The last throbb of civilization was made silent by the screw of chattel slavery. At last, in the beginning of the tenth century, the barbarians ceased roaming. The most powerful among them assumed the mastery over the rest. Each of these lords selected a spot sufficiently elevated to command a good strategic position and built on it a castle which served at once of stronghold and of residence. Round that castle, beneath, at its foot, clustered mud huts: they were the dwellings of the slaves whom the lord owned as chattels. And yet, those slaves were not negroes, did not belong to a race so-called inferior. They were the descent of kings, princes, lords, and well-to-do merchants who had fallen prisoners of war and of barbarian conquest; they were the vanishing shadow of the great Roman and Greek civilizations—a shadow which shall retrace its steps, by and by, and shall grow dense and denser until it mingles anew with its substance, and then—look to your castle, your escutcheons and your dames, oh mighty, haughty seigniors!

Thus was feudalism established. In a short time Europe became studded with formidable, grim-looking manor houses, whose barons held men and the land on which they lived in dependency. Germany, the west and north of Europe, including England, became strongly feudalized. In southern Europe and in the center of France, including Flanders, a few cities—dilapidated remnants of the Roman empire—strove to preserve their existence amid the chaotic overturning of the barbarian invasion, the devastating wars of Charlemagne, and, later on, against the rapacious greed of the feudal lords of whom they had become vassals. These cities were commercial and industrial centers. Their inhabitants had preserved a few sparks of the spirit of liberty which, under Roman rule, municipal rights had elicited. In the eleventh century the sparks kindled into a flame and there was inaugurated a struggle known in history as the "Insurrection of the Cities," or commons, which lasted one hundred years and culminated in the victory of the commons over their seigniors. Charters were granted to the cities or communes (also called in Latin *gildonice*) and their autonomic liberties were guaranteed. The first freed communes in France were Beauvais, Laon and St. Quentin. These, strange

say, were vassals of bishops, and were led by their lords in their efforts to win their freedom. It is a popular belief that the Christian church in the middle age, and earlier, upheld chattel slavery and the bondage of cities. This, however, is erroneous. Reliable historians prove the converse to be true. In Greene's "History of the English People," date 1013, A. D., we read: "Slavery was gradually disappearing before the efforts of the church. Theodore had denied Christian burial to the kidnapper, and prohibited the sale of children by their parents after the age of seven. Egbert of York punished every sale of child or kinsfolk with excommunication. The murder of a slave by lord or mistress, though no crime in the eyes of the state, became a sin for which penance was due the church."

Althelstan gave the slave a new rank in the realm by extending to it the same principle of mutual responsibility for crime which was the basis of order among the free. The church was far from contenting herself with this gradual elevation; Wilfrid led the way in the work of emancipation by freeing 250 serfs whom he found attached to his estate at Selsey. Manumission became frequent in wills, as the clergy taught that such a gift was a boon to the soul of the dead. At the synod of Chelsea the bishops bound themselves to free at their decease all serfs on their estates who had been reduced to serfdom by want or crime."

In the history of France similar testimonies are given by Guizot and Jules Michelet, both reliable and unbiased historians. In thus siding with the harsh lot of the slave the church was doubtless actuated by a sense of morality and justice, but there was also a political reason which made it imperative for her to curtail the power of the barons, who were the great slave holders and even dealers, according to Greene's history, which states: "The wealth of English nobles was said sometimes to spring from breedingslaves for the market." Date 1113.

The church and feudalism stood for two powerful principles which repelled one another. The former was a pure expression of centralized authority, the latter that of decentralized and autonomic authority. Thus the church, true to the laws of her own being, hampered and harrassed feudalism. In the middle ages we find her allied with the king of a country against his vassal barons and other nobles whose might was a menace to the kingship. Rugged feudalism, then, had to contend against the three elements which, besides itself, constituted the nation, viz.: the king, the church and the common people. It was to the handicapping of feudalism by the crown and the church that the communes owed

their freedom and their vested rights.

Right on the steps of the final emancipation of the communes the spirit of liberty, long subjugated, began to rise and flutter about the minds of men. Abelard, in France, and his disciple, Arnold de Brescia, in Italy, discoursed on philosophy and reduced religion to it. Their teachings created an immense sensation and stirred the world. They threw about the sparks of free thought which, in the fifteenth century, were to set Europe ablazing.

The intellectual awakening of the twelfth century was partly due to the influence which the wars of the crusades brought upon the European nations. In these wars nobles and commons and slaves moved and mingled together and shared the emotions of danger, hope and glory. In the face of danger all sham distinctions vanish, nothing but the man is left and there he shines gloriously. The beneficial effect of the crusades went still further. Christians, Greeks and Mussulmen were brought face to face, the superstitious hatred they bore one another melted away when their close contact revealed their true nature, and, according to Guizot's "History of European Civilization," they mixed together in all kinds of social relations and formed ties of friendship. The crusades, I maintain, was the first serious blow given to religious superstition in our own era.

The primitive organizations in England which corresponded to the French cities or communes, were called merchants' guilds; those of Holland were called *Vroedschapen*; those of Schleswig *Heralagh* and those of Germany had several appellations.

The same characteristic, however, was common to all these fraternities. They were the merchants and small traders of the free corporate cities, organized for mutual protection and self-government. Guizot gives a clear definition of these communes:

"Let us enter one of these free cities," he says, "and see what is going on within. We find ourselves in a fortified town defended by armed burghesses. These burghesses fix their own taxes, elect their own magistrates, have their own courts of judicature, their own public assemblies for deliberating upon public measures from which none are excluded. They make war at their own expenses, even against their suzerain, maintain their own militia, in short, they govern themselves, they are sovereigns."—[History of Civilization in Europe, p. 153.]

Mechanics and persons employed in menial work were excluded from the communes and merchants' guilds. Manual labor was regarded as degrading. "One passage in a Brussels ordinance," says Mr. H. W. Cherouny in his work on the labor question, "dated 1229, speaks of the workingman as one without a hearth, without

honor, who lives by manual labor. It was legal for a guild member to box a laborer's ears on the street if he thought himself offended by words or gestures."

"There soon became formed a burghess aristocracy," Mr. Guizot informs us. "The notions of that day, coupled with certain social relations, led to the establishment of trading companies legally constituted. A system of privileges became introduced in the interior of the cities and, in the end, a great inequality."

History is the best text book for the political economist and the philosopher. Breadth of mind and soundness of judgment cannot be the share of the individual who neglects the study of human history. The efforts of man in the past and the results of these efforts are the molecules that constitute the Rock of Ages, the indestructible, because it is the material evidence of eternal truth.

The burghesses of the twelfth century, they whose fathers had shed their blood and offered up their lives to free themselves and posterity from the despotism of the feudal lords, were no sooner emancipated than they became in their turn outrageously tyrannical over the toilers whom they used for producing their wealth. Human rights is a truth to the oppressed, but to the ear of the oppressor it sounds like cant.

Was the tyranny of the burghesses as detestable as that of the baron? Oh! it was far more detestable, far more inhuman. To the burghess, the toiler was a thing, an instrument wherewith to realize profit, a tool to be used for all it is worth. In the relation of the baron to this slave sentiment held a place, were it ever so little; a kind of feeling analogous to that of a man for his horse, which he bought and which he feeds in order to preserve its existence. But in the relation of the burghess to his journeyman sentiment held no place. The burghess purchases not his laborer and had no interest in his preservation. The labor market is always well stocked, too well stocked sometimes, for the burghess is now and then very distressed by the mutinous tendencies of the human working machine. The religion of wealth dehumanizes man, the offerings to that insatiable deity are the flesh and bones of the toiler ground into bits of gold!

To the arbitrary conduct of the burghesses of the cities of the middle ages the laboring element often replied by riot and even insurrections. The merchants' guilds in England and Germany had now taken the title of Patricians and all mechanics were excluded from the fraternity, participating only in the burdensome taxation for the maintenance of the guild. Masters of crafts, some of them well to do, commenced organizing guilds of their own which com-

prised themselves, their workmen and apprentices. The patricians brought against those guilds (called *mechanics*) all the weight of their mighty power. Royal edicts interdicted all associations of mechanics. In Zurich it was ordained that "nobody should enlist to form a guild of mechanics under a fine of banishment for five years, payment of fifty marks and destruction of his house." At Magdeburg, in 1301, ten craftsmen's guild-masters were burnt in the market place; the weavers of Cologne lost a battle against the merchants' guilds, and on November 21, 1371, thirty-three craftsmen were decapitated, eighteen hundred banished and their guild hall was burned.

The London weavers, being a powerful organization, took the lead in petitioning the government for recognition. They and the Oxford weavers obtained their charters under Henry I. During the reign of Henry II. the Weavers' Guild of Nottingham, Huntingdon, Lincoln and Winchester were incorporated. The final victory of the mechanics' guilds occurred under Edward III and the name of "Great Livery Companies" was given them. These guilds were similar to our present trades unions with the exception that they embraced the manufacturers as well as the workmen. Each guild catered to the interests of its own trade in all the departments of production and distribution; they were free, self governing industrial centers. That they became wealthy and powerful need not be stated. Kings, princes and nobles sought the honor of membership. King Edward III. was enrolled member of the armourer's guild; the grocer's guild had sixteen aldermen among them. On reaching the summit of power they also reached the paroxysm of tyranny and corruption. The masters had become merchant princes, and the laborers had become their slaves. Enormous fees were demanded for apprenticeship and for the privilege of a journeyman to become master. The rigidity of restrictions consigned a large class of the people to idleness and pauperism.

The apogee of the mechanics' guild rounded another cycle of the workings of authority. The communes, oppressed by the seigniors, had revolted and won their liberty. Become merchants' guilds they set to oppressing the poorest among their fraternity—the craftsmen. These in their turn rebel, win their rights to form themselves into guilds and become powerful. Immediately they set to oppressing the poorest among them, the journeymen and apprentices. It is the same phenomenon eternally repeating itself under various conditions; it is a vicious circle; we can not get out of it. The words of P. J. Proudhon. "Invested with authority, all men are

alike," stand proven in all data of human history. It is not the man that is bad, it is the condition that forces him into haughtiness and cruelty. Oh, when will the working class learn that no one can do them justice, that they must perform that act themselves; they must do it or remain enslaved.

With the ascendancy of the mechanics' guild to local government and industrial supremacy in the 13th century, the class called in history the third estate had perfected its organism. From the ruined cities of barbaric times, the third estate has kept in constant process of formation. It silently, cautiously, and laboriously plodded along, gathering to itself all the good on its road, interfering with none of the rights of the barons or of the crown, but simply struggling to preserve its own existence and develop its vital functions. Year by year it grew in numbers and strength, absorbing the most intelligent and ingenious of the working class in the midst of which it moved like a centre of gravitation. At the end of the 13th century it had secured all the avenues of industry and monopolized all means of production. Then it turned round and put up a fence between itself and the working class which stepped on its heels. Thus was created the fourth class, the proletariat. With that proud and rigid upstart, the third estate, soon to be the bourgeoisie, we arrive at the threshold of the 14th century.

The church, as I have stated before, maintained during the middle ages an attitude of antagonism toward the barons and tacitly formed an alliance with the crown. The common people who instinctively hated the barons loved the church for her apparent equity and for the spiritual benefits she conferred on them. "The church," says Michelet, "was the real domicile of the people. A man's house, the wretched masonry to which he returned in the evening, was only a temporary shelter. To speak truly, there was but one house, the house of God. Not in vain had the church her right of asylum, she was now the universal asylum." \* \* \* Men prayed there, there the commune held its deliberations. The bell was the voice of the city; it summoned to the labors of the field, to civil affairs, sometimes to the battles of liberty. In Italy, it was in the churches that the sovereign people assembled. It was at St. Mark's that the deputies of Europe sought from the Venitians a fleet for the 4th crusade. Trade was carried on around the church, the places of pilgrimage were fairs. The articles of merchandise received the priestly blessing." \* \* \*

Patient, full of ambition and greed for wealth, the Christain church ingeniously brought within her grasp the land and the

riches of Europe. "In 1245," says Cassell's History of England, "the church's preferences alone held by the Italians in England, independent of other exactions, amounted to 60,000 marks per annum, a greater sum than the revenues of the crown." \* \* \* In 1279 she owned the three-fourths of the property of the whole kingdom and threatened to swallow up all its lands."

The barons were furious. They sent orders to the wardens of the sea-ports to seize all persons bringing bulls and mandates from Rome.

The pope, instead of relaxing his grasp as prudence suggested, sent an order demanding for himself the half of all the revenues of the non-resident clergy and a third of those of the resident ones. This last stroke broke the camel's back. It roused the English clergy and embittered the king. The bishop of Lincoln, Grotestate, tore up the bull and sent a caustic reply to the pope. The holy father was both astonished and indignant. "What!" he exclaimed, "is not England our possession, and its king our vassal, or rather, our slave?"

Henceforward the conflict between the church and the crown ran fierce. Edward I enacted statutes detrimental to the holding of mortmain property. That struck the church on her backbone. "In 1297 the king outlawed the clergy and ordered the sheriffs of England to seize all the lay fees of the clergy, as well secular as regular, with all their goods and chattels and retain them until further orders. He gave orders to all the judges to do every man justice against the clergy, but to do them justice against no man."—[Cassell's History of England, pages 455-6.]

These energetic measures on the part of Edward I were forced upon him by the absolute impossibility of raising taxes on his people whom the church had drained dry. The king was in great need of money to carry out his war against the Scots, but none could be levied. The treasures of the nation, the accumulated wealth of centuries, were stored up in churches, monasteries, and in the vatican at Rome. The king, it is said, was so distressed and perplexed that, in one of his parliaments, he was seen to weep.

Towards the end of the 13th century, monarchy, sustained as it had been in the past by the common people and burghesses, had shaken the foundation of feudalism and become solidified. It was fast approaching absolutism. The governmental machinery had undergone gradual and important transformation, had become huge and complex. The bankers and the legists now clustered round the throne and chased away the clerical element which hitherto had monopolized the secular power.

## OPINIONS VS. FACTS.

It is frequently much easier to give an opinion than to state a fact, opinions are plenty in the market, everybody has them, and can humor them, but when it comes to facts, right down hard facts, from actual observation it sometimes takes a good many days, weeks, or months, to dig a fact out of a mass of opinions. And the writer has often when comparing some statements with the facts, been reminded of his boyhood days, when sent out to look up the cows, and get them home for milking, accompanied as all boys are, by a good dog. Now and then on the way home the dog would find a wood chuck. The cows would find their way home alone, and after pulling down a rod or so of stone wall, more or less, the dog would get a grip on the wood chuck; and sometimes long after supper and after milking the boy, the dog, and the wood-chuck would find their way home, a good deal belated, though of little consequence, and sometimes the boy would get tanned with "oil of birch" but the *fact* was, the wood chuck was too much of a temptation.

So it is with a great many opinions, without stopping to consider all the resultant effects people attach a great deal of value to somebody's opinion, without looking carefully into the real facts. And while I don't propose to make war on anybody's opinions, the argument is intended simply to show that it is much better to pay careful attention to the facts, even if we don't pat ourselves on the back so much as to our opinions.

The discussion in the FIREMEN'S MAGAZINE of late, some of which I am sorry to see has taken a slightly sarcastic turn with reference to the clearance in a steam engine cylinder, as one of the subjects in which opinions on one side and facts on the other have been stated, with various references as to authority. Clearance has perhaps been one of the writer's hobbies for the last 25 or 28 years; men have frequently made war on clearance, and clearance remains to day, just as much as back pressure, it is one of the things we have to get on with. We know it is a nuisance, we are sure it is expensive, and it is a fact that it is rarely stated correctly, except by some man that pulls the thing to pieces and measures it, and finally ascertains the fact that it is much or little larger than was stated. Clearance properly is every particle of room be-

tween the face of the valve as it sits on the seat, and the piston head. It is not alone the clear space between the end of the piston and the end of the cylinder; it is the space between the piston head and the cylinder end together with the space connecting the valve port, whether in the middle or end of the cylinder, and the space connecting the port with the cylinder up to the piston head, when the crank is on either dead center.

The clearances on some of the steamships which have piston valves and where the cylinders are large, involves from one to three hundred cubic feet, and the percentage varies anywhere from two and a half on the most modern construction of the Corliss valve engine, up to thirty-six or thirty-eight on some of the high speed electric light engines which the writer has indicated. The locomotive engines where the valve ports are in the middle of the steam chest have clearances varying from seven to fifteen per cent., according to the steam valves and the way in which the motion is adopted. Four years ago the writer indicated for the builders some large freight engines with piston valves, and a very peculiar movement, in which the clearance was practically from fifteen to eighteen per cent.; in this particular engine the steam was more efficient than in the slide valve Richardson type, although the clearance with the piston valve was from five to six per cent. more than with the Richardson valve; and this assertion is borne out by the fact that very few piston valves were made, for while they were advantageous in one way, they made a good deal of trouble for the man who had to stay on and run them.

Here then an opinion is not borne out by the fact, while both are correct as far as they go.

The question of the effect of clearance on the economy of steam is one that has been very much discussed there being among its advocates men who claim, that so long as the clearance space is filled by compression that no more steam is consumed by the engine; on the other hand, we have the well known fact that clearance reduces the ratio of expansion, and while it increases the mean pressure to a certain extent it does it in such a way that it does not increase the economy of the engine, this may vary more or less, on a locomotive, according to the load, grade, curves, the pressure and the point at which the lever is set. While various opinions exist on clearance the facts are simply, that the less clearance it is possible to use in any engine with safety, all things considered, the greater the economy. And in some of the modern pumping engines, the builders have been to a very great expense by making the

valve ports and the valve seat of the Corlies engine in the heads, so as to get up nearer to the piston, and reduce the clearance. In a pumping engine examined by the writer only a few weeks since built by the Allis works, at Milwaukee, Wisconsin, probably the cost to the builders of that engine was more than \$1,000 simply to reduce the clearance one or two percent. Ordinarily it may be laid down that the greater the clearance, the greater the consumption of steam per indicated horse power, and on the other hand it is equally just to lay down the fact that conditions exist where economy is not so essential as first cost, or room, so that these engines which appear to be very lacking in economy are still demanded and must be used.

Conditions exist in all engineering where we cannot use the machinery valve gear, or the apparatus which we would like to. And it is the economy of different engines under different conditions, and we must consider all these things when making any statement with reference to them it is more or less trouble to get at the actual clearance of any engine but it can be done by turning the engine over, and by use of the water pail, rubber hose, thermometer, and a pair of scales.

The weight of water and its temperature being known it is easy to convert a certain number of pounds into exact cubic inches it occupies when the temperature is known. This is some trouble, takes time, but when this is known, the abstract fact is known and the percentage that the clearance bears to the whole cylinder volume can be very easily computed.

If an indicator diagram is taken and the clearance is added in proportion of its ratio to the whole cylinder volume it lengthens the lines of admission, or makes the cut-off later, and either one of these points which are practically one and the same, increase the terminal pressure, so that increase of terminal pressure increases the mean pressure, and increases the consumption of steam, but does not increase the power in proportion, for anything that reduces the ratio of expansion reduces the gain in economy of steam. The question is, does clearance cost something? And it comes down to the old question of getting something for nothing, most men have decided that it is impossible to get something for nothing, and have ceased to make efforts in that direction. This could be shown much better by an engraving, and it may come to that if the editor approves.

A curious statement has lately been made with reference to the "pre admission" of steam, the writer was always old fashioned enough to call "pre-admission" by its real name, which is *steam lead*; if the valve opens

before the crank gets to the dead center, it was steam lead twenty or thirty years ago, and the writer did not know the newfangled term; the same dudish expression has been referred to release, compression, etc., all this can be shown on one or two diagrams better than in a good many words.

What is a railroad any way? This question regarding it in a practical sense is nothing more or less than a combination of teams for carting to any point merchandise, or people, from one point to another, and the fact of its management settles the fact of its paying something back to the people who own it, speaking from a strictly commercial standpoint (certainly not where the receivers mismanage and others steal everything but the right of way and a streak of rust) and in place of the old four or six horse teams that used to travel over the country with a single wagon, a locomotive takes from five to twenty five variously loaded and cart them for from one-eighth to one tenth of what the price was thirty or forty years ago, having reduced largely the cost of transportation, and if the fact is to be stated, have still to reduce the cost by various economies, so that to make the thing practical or applicable we must study to do more with the same amount of fuel, and to use less fuel for the same amount of work or in some other way to accomplish more with the same outlay of money, whatever it may be.

The discussion of this topic by the readers of the MAGAZINE will be of far greater advantage to them individually, and to their employers than the wasting of pages on a question without coming to any actual facts, this kind of a discussion is also elevating to every one that participates, opinions are as good from one as from the other, if based upon fact, but it is frequently more trouble to get at an actual fact in a case than it is to simply express an opinion and let it go at that. The MAGAZINE is really for the benefit of those who read it, and through which they certainly do much to help each other, if only they will do so, and it would seem that much good might be done the advocates of both sides of the question, and such is the sincere hope of the writer, rather than to be considered as criticising in reference to the facts and opinions of others.

For firemen that will pay attention to the facts in his work, or his business, there is plenty of room. Men are wanted every day of the year who can do something better than the other fellow has done it. This is an old saying to be sure, but is just as true as when Daniel Webster said to his inquiring young friend, "there is plenty of room up-stairs."

Thos. Pray, Jr.,

## INSTRUCTION.

Mr. Weiler is as ready to learn as any of the rest of us and is ever on the lookout for new facts and theories, and the first fact noticed in the October MAGAZINE is that our friend Parshall should be thunderstruck. Up here it is the lightning which strikes, and if a man wishes to be so precise as our friend he should not start out with assertion so contrary to all natural laws. Again I have not been a student of Milton to any great extent, and it is therefore hardly possible that I have stolen any of his grandeur of language; indeed if correctly informed I believe Milton lived and wrote before the age of mul—(oh! I nearly forgot that I "almost bewildered" our friend by writing of a number of cylinders as multiplied, yet I can hardly call them by any other name; so at the risk of "almost bewildering" him again I must say it), before the age of multiplied cylinders and expansions. If our one cylinder be increased to two we have certainly multiplied by two, and if we have four as in the quadruple engine it certainly indicates another multiplication. I wish indeed that we were Titans so as to be able to reach the very skies of mechanics and be able to bring them to mortal view, but whenever we plume our wings for an aerial flight some critic makes it hot enough to soften our wax wings and lets us down. May our fall ever be into a soft spot as that of Icarus, who while flying with his father Dædalus out of Crete into Sicily, soared so high as to melt the wax in his wings and fall into the sea. Dædalus is said to have been a most ingenious artist and mechanic of Athens, who formed the Cretan labyrinth, and invented the auger, axe, glue, plumb-line, saw, and masts and sails for ships, and why Icarus should be brought to grief in the performance of his filial duty remains a mystery, just as great as the fact that friend Parshall should seek among ancient mythology for suitable words or illustrations to embellish a modern mechanical discussion. Let us leave these old gods and demi gods and come down to the present time when we have things fully as wondrous, and many of them far in advance of even the most vivid dreams and legends of the ancients.

Getting down to the point under discussion cleared from all verbiage it was simply this: was Bro. Daraghty right when he said that "Clearance is the space allowed for the piston to clear the cylinder head when engine is on the center" and nothing else. There was nothing in my article about the economy or wastefulness of clearance, but Parshall jumps at such a conclusion without any reason for it, and bases his arguments on that assumption. After 18 years of experience with all kinds of engines from locomotives (lowest?) up to

the compound condensing, he ought to go slow and not to forget some of the actions of steam and the most common laws of nature. One of the first laws we stumble upon is that in all nature there is no vacuum, and that it is very hard to produce a vacuum even with the best appliances for the purpose, and yet Mr. Parshall says that "every time the exhaust port opens, the clearance space is cleared of all the steam to the valve face, and that the space from the piston to the valve face is filled each stroke with steam that is thrown away." This of course does not settle the question of what is clearance, but it does settle the point whether Mr. Parshall is a safe authority to quote after, and in order to illustrate let us take an ordinary diagram of valve motion such, for instance, as may be seen in "Forney's Catechism," fig. 266, page 294, where we have motion curves laid out. Taking the mid-gear curve we find the port is open the amount of lead at the beginning of the stroke, that it never opens full width and closes at about  $15\frac{1}{2}$  inches. The exhaust port is open nearly full width at the beginning of the stroke, opens wider than commences to close at  $12\frac{1}{2}$  inches, but does not close till about  $21\frac{1}{2}$  inches of the stroke, thus leaving  $2\frac{1}{2}$  inches of travel to the piston out of a supposed 24 inches. The exhaust does not create a vacuum in the cylinder when it leaves it, and no indicator diagram ever made has shown that to be the case, hence we have if not more at least the usual atmospheric pressure in the end of the cylinder. If the clearance between the cylinder head and the piston was one quarter of an inch, and  $2\frac{1}{2}$  inches of atmosphere had to be compressed into it, we would obtain 126 lbs. of compression; of course not considering the steam-ways or passages. We would thus have not an empty space but a space filled with compressed steam of nearly boiler pressure, and even almost the same heat, and this is what is taking place with well designed locomotives on our roads every day. A caution was thought necessary by one of the best designers of locomotives, lest the compression be allowed to become too great and lift the valve from its seat against its face. So if this counts for anything it must certainly be safe to say that there is no vacuum in the end of the cylinder, but that there can be power enough created there to form a valuable aid to the further movements of the locomotive.

Now as a compromise I would propose that Mr. Parshall accept the term clearance as laid down by "Forney" to mean "the space between the head and the piston" and we will agree with him and "Forney" in calling it "clearance space up to the valves."

Wm. Weiler.

## NOTES.

In examining a fireman for promotion, "how much knowledge of the air-brake is it necessary for him to have to be considered fully competent to take a train out on the road?" is a question that formed the subject of a committee report, and created considerable discussion at the recent convention of the Traveling Engineer's Association. Firemen may read the following report concerning what the Traveling Engineers consider it is necessary for them to know, and then begin to study up, as it is possible that many will find themselves lacking in knowledge upon a few of these points, at least: "He should be able to follow the air from the time it enters the air-pump until it returns to the atmosphere at retainers or exhaust ports on triple, and know its different names and purposes. He should have a sufficient knowledge of the air pump to make an intelligent report of troubles, or work to be done, or repairs to be made. He should know when the pump has stopped because he is not giving it oil. He should know that if the pump stops on account of the governor shutting it off, that it is all right, for I saw a report on a work-book of a prominent road, not long ago, that there was something wrong with air-pump; he could not get over 70 pounds on either hand on gauge; that the pump would stop and then start up again. Now this man fired a passenger engine six months before he was promoted, and did not know anything about governor or brake-valve action. He should know the effect of main reservoir being full of water, the causes of pump heating, and tell which one is causing the trouble, so that he will not burn the pump up by poor piston packing or too much oil. He should understand the different positions of brake valve and the importance of excess pressure with long trains, and the why. He should know the damage he can do with rough handling, with both wholly or partially equipped air-brake trains, and the effect slack has on the trains. He should know that he should not draw less than 5 pounds from the train pipe, or rather gauge, for the first reduction, and why. That after the first reduction he should draw a little air at a time in making a stop, so as to make the stop with one application with a freight train, and make it stop a short distance from the point, we will say it is a water tank. Then if level release his brakes, and pull up and stop with reverse lever; if he has done it right, he should have only 40 or 50 feet at farthest to pull up. If he releases before he stops, not to open the throttle at the same time. The effect of overcharging train pipe if he wishes to apply brakes again before auxiliaries and train pipe have time to equalize. He should know that with a

train that has parted there is no necessity to bleed the air out of the auxiliaries on rear portion; if he handles his brake-valve right he can release them when he is sure the brakeman has opened angle cock again; if air has been let out he would not know it until he wanted to stop, and perhaps have a wreck because all cars were not working. He should know if hands on gauge stood ten pounds apart when valve is in full release the gauge is out; if together in running position the brake-valve is defective. He should know that the black hand on gauge is not connected to the train pipe, neither does it read that on gauge, it reads train line, which includes train pipe auxiliaries, equalizing reservoir, and when brake is fully applied he can tell very closely what pressure is in brake cylinders, by measuring piston travel. In handling trains wholly equipped with air he does not have as much shock as he does with partially equipped trains; then he will want to use all brakes, and not a few on head end of train, as some men now want to do. In plain words he will soon find out he can handle 50 as well as 10. As soon as he does this he will do better work for himself and the company employing him." One of the engineers, during the discussion on this report, said that the company he worked for did not undertake to put brains in men, or words to that effect, evidently intending to convey the idea that it required more brains than some firemen possessed to master thoroughly the points covered by the report. There would appear to be some good ground for this idea when it is considered that the report makes mention of a man who knew nothing about the action of the pump governor, although he had fired a passenger engine for a period of six months previous to his promotion. Although such ignorance as that might not be taken as absolute proof of want of brains, it certainly shows a sad lack of the power of common observation, the presence of carelessness, laziness, or something like those qualities which are exceedingly bad for engineers or firemen to carry around with them; and, in these days of active general discussion of air-brake matters in railroad circles, such ignorance certainly does furnish strong presumptive evidence of extreme weakness in the upper story. It would not be sufficient evidence to warrant commitment to a retreat for feeble minded persons, but it might be good enough on which to base a will contest after the individual's decease. Still, I have no doubt that there are many firemen who are in the same position with this individual spoken of, (although they must be among the callow ones) and there are many more who, although able to understand the functions of the pump gov

error, will yet need to do a power of hard studying in order to bring themselves up to the standard of knowledge required by the Traveling Engineers, to be possessed by candidates for promotion. The air brake is becoming every day a more complicated mechanism; one who was well versed in knowledge of the air-brakes ten or fifteen years ago would be completely at sea in attempting to successfully handle the apparatus of the present day, providing he had not kept himself fully posted in the meantime; and firemen need to keep themselves fully up with the times, by devoting plenty of study to this branch of their business.

\* \* \*

Isn't the air-brake becoming altogether too complicated a mechanism? Couldn't the same work, or equally as good and equally as safe work, be performed by a machine containing about half the number of parts composing the present apparatus? There are so many thing-um-a-bobs and rig-a-ma-jigs about the present apparatus that its very appearance is confusing to most persons, and it is not much to be wondered at that there are many whose business it is to handle it, day in and day out, who know considerably less about the air-brake than they ought to. Why, if this tendency towards complication and addition of parts is carried much further, one will need to take a thorough course of training in some technical school or other in order to be able to understand thoroughly the mechanism of the brake and give a clear description of the functions of its various parts. According to the evolution philosophy, as expounded by Herbert Spencer, progress consists in an advance from the homogeneous to the heterogeneous; the evolution of the air-brake has certainly proceeded in harmony with this condition of the law of progress. But there is another condition of the law of progress which says that progress is also a movement from the indefinite to the definite. As well as being a movement from the simple to the complex, progress is also a movement from the indefinite to the definite. That the evolution of the air brake has been such as to satisfy this latter condition of the law of progress is open to question; there are some mighty indefinite points about it.

\* \* \*

I was looking at the cut of a new quick-action triple valve a short time ago, the invention of Mr. Herbert M. Lofton, of Savannah, Ga., and it struck me as being a great improvement in triple valves. It seems to me that this triple is capable of doing all the work of the standard Westinghouse triple, although it is so simple that a child could understand it, and it has so few parts that one wonders what in the world is the necessity for all the parts of the Wes-

tinghouse triple when he examines this one. The principal claims made for this new valve are—quoting from the circular advertising it—"its simplicity, the absence of delicate parts liable to get out of order, the small number of working parts, and the ease with which they are accessible for cleaning and repair." Some such a triple as this one is needed badly; the tendency to complexity has been carried too far; the simple foundation principle of the air brake does not require so vast an amount of complex and indefinite machinery for the purpose of putting it in successful operation. But it is not at all likely that any device which represents a very radical departure from the Westinghouse apparatus stands any reasonable show of obtaining recognition to correspond with its merits. That is one of the beauties of the monopolistic régime we are living under. It is stated on good authority that there are many improvements in telegraphy—some of them of vital importance to the public—that the Western Union has bought up, or repressed in some way or other, so as to hold the field with their old instruments and shield itself from the competition of the new. It is some such condition as this, I imagine, that surrounds the air brake situation. The Westinghouse people are in practical control of the field, and by buying up or repressing improvements which promise to compete with their own instruments they may continue their apparatus in use until such time as it appears profitable to them to make a change. This, in spite of any benefits which might accrue to the railroad, and to the public at large, by reason of the introduction of such improvements. Outside of Westinghouse circles the inventor of air brake machinery stands a mighty poor show of getting any benefit out of his inventions. Thus the world must wait for progress until the millionaires are ready for the curtain to go up. *W. P. Burland.*

#### MONEY FOR THE EXTRA MEN.

If all governments who own the railways follow the practice of Brazil in purchasing big engines woe betide the poor fire boy—unless, like Brazil, they furnish two boys to the engine. The Brooks locomotive works are now constructing a class of engines which *Locomotive Engineering* aptly dubs mastodons. This publication gives the following information regarding these engines: "The cylinders of the engines are 21x26. The steam ports are 18½ in. long, 1½ in. wide and the exhaust port 3½ in. wide. Richardson balanced valves are used with ½ in. lap and 1½ in. lead. Driving wheels are 54 in. in diameter, with 9 in. axles. The boiler is 28 feet 7½ in. long, the smallest ring being 68 inches." The total weight is 170 000 pounds and is a mass of brass bands and casings. Wonder if the oldest man will kick for her."

## POETICAL MECHANICS.

THE CONFESSIONS OF "SHANDY MAGUIRE."

(Daily Telegraph, Harrisburg, Pa.)

TO WILLIAM E. LOCKWOOD.

Friend Lockwood, while the night is young,  
I have a ditty yet unsung.  
Just give me your attentive ear,  
Un il its music you will hear.  
I've often scrimmaged through my head,  
In search of rhymes ere going to bed,  
To dress up subjects rude and rough,  
Which I considered pretty tough;  
But, dear old friend, just now I find  
A nut to crack of hard st kind;  
To frankly tell you what I think,  
In language smeared with printer's ink.  
About that "Quest" you harp on so,  
Your everlasting hammer-blow.

I've often watched the wheels revolve, and sat  
With doubtful fancies 'neath my hat,  
As round and round they'd spin amain  
Before a swiftly moving train;  
I've often thought I felt the crack  
Parading up my aching back,  
Around my shoulders, ribs and sides,  
On ne'er-to-be-forgotten rides;  
I'd hear a thump above the din  
Of rolling wheels as on I'd spin,  
And from a heart o'ercharged with woe  
I'd say, "That's Lockwood's hammer-blow."

When joints were rough in early spring  
I'd feel some jarring round me ring;  
And when I'd too many cars,  
The thumping almost reached the stars.  
A deadhead often in the cab  
Would fire at me his fluent gab  
About the rods at every throw,  
Till told of Lockwood's hammer-blow.  
The engine foreman once got on,  
I almost felt my job was gone.  
He sat uneasy on the seat,  
And seemed affected with the heat—  
At least I thought so—till he said:  
"Instead of snoring in the bed,  
Key up your rods, your wedges set,  
Or on the carpet you will sweat."  
"Why, you're mistaken," I replied,  
"That jar you feel when open wide  
Is not from rods unkeyed, I'm sure,  
Besides the wedges are secure:  
Just watch the crank on downward throw,  
You'll find it's Lockwood's hammer-blow."  
Old friend, I took your name in vain;  
That chap he jumped the moving train.  
And muttered as he struck the ground:  
"How some men let their engines pound."

To legislative halls you go  
Expounding on the hammer-blow  
With railway presidents you're free  
To call at will, and make them see  
The strain on bridges, and on rails!  
When hammered by revolving flails;  
In institutes of science, too,  
Tough problems they receive from you:  
You've got a flowery gift of gab  
To win the heroes of the cab—  
And may you live for many years  
The sterling friend of engineers—  
And I shall pray that, ere you die,  
You'll look me squarely in the eye,  
Conviction flowing from your lips,  
Devoid of any verbal tips,  
And showing me, beyond a doubt,  
That you have solved the problem out,  
Just where to find and how to go  
To catch your famous hammer-blow.

Shandy Maguire.

September, 1894.

MR. EDITOR:—Bro. Fennell (Shandy Maguire) makes a loud call upon me to show him

"Just where to find and how to go  
To catch your famous hammer-blow."

Bro. Debs said or wrote to me, "the boys" are getting a little tired of the hammer-blow question, suppose you give them a dissertation on valve motion. My reply was: "So long as locomotives are counter-balanced in the present ignorant manner, I propose to keep up "protestation," "agitation," "demonstration," and time will bring about "revolution" in locomotive mechanics." Recent investigation goes far to convince me that the "Centrifugal Lift and Tangential" throw of the counter balance in a locomotive driving wheel may be worse in some regards than the hammer-blow. I begin with the intention of complying with "Shandy's request, "and showing me, beyond a doubt, that you (I, and others) have solved the problem out." The Purdue University at Lafayette, Ind., has done a grand work in the solution of this problem, by what are known as "shop tests." Just as these were bearing rich fruit misfortune came and fire destroyed the labor of years. Phoenix-like, she has risen from the ashes and is again restored and "ready for business at the old stand." Before this destruction, however, some tests were made which determined, with a 85,000 lb. Schenectady locomotive, on the locomotive testing machine, that the hammer-blow of the counter balance hammered a three sixty-fourth ( $\frac{3}{64}$ ) inch steel wire as flat as a piece of paper, while the lift of the same left the wire a circle, showing the driver left the rail by this action. If these shall lead to further tests in accordance with the recommendations of the committees of the Franklin Institute and American Railway Master Mechanics' Association, I believe these will prove my predictions more than fulfilled. The public and railway men owe a great debt of gratitude to Purdue University, and also to Professor William F. M. Goss, Director Engineering Laboratory, under whose charge the tests were conducted, and will be continued. Professor Goss has just sent me a recent pamphlet issued by the institute, entitled "Locomotive Testing at Purdue University, Lafayette, Indiana, 1894," with three photographic views of the locomotive "Schenectady" resting on the testing machine. 1st. A head view. 2d. A side view, with the wire passing under the front driving wheel. 3d. A photograph of the locomotive in the ruins after the fire. There are six other plates relating to the plans and details of these tests, besides eleven pages of printed matter.

The confessions of "Shandy Maguire," dedicated to myself, are those of a locomotive engineer in good standing with the Delaware, Lackawanna & Western R. R. residing at Oswego, New York, and last but

not least he is the acknowledged poet laureate of all the railroad brotherhoods. The way he captured the audience at the Locomotive Firemen's convention at Harrisburg on September 10th he might claim that other title, "Poet Lariat," for he surely "noosed" them. After Shandy's poetic confessions he still wants to know "just where"

"To catch my famous hammer-blow."

Let him, or for that matter, any lodge of locomotive firemen, or division of locomotive engineers, send to Professor Goss for a copy of the data herein referred to, and keep this on file in the lodge and division rooms. And further let the 60,000 men in these two brotherhoods heartily aid and support Purdue University in this grand undertaking. First, with their influence. Second, with their means and votes if necessary. This subject seems to be coming to the front again, if I may believe the recent photographic conditions of track as shown in the *Railroad Gazette*, and the confessions of "Headlight" and "Bridge Engineer" therein and relating thereto. This subject ought to interest and instruct the American "International Association of Railway Superintendents of Bridges and Buildings," who hold their next annual convention at Omaha in October.

*William E. Lockwood.*

Loch Erie, Glen Loch, Pa.

#### An Air-Brake Test.

Brother G. A. McLean, of Salt Lake Div., 222, sends us the following account of an air-brake test, which will no doubt be of peculiar interest to many of our brothers who are continually facing the danger of a "run-away" on our mountainous roads:

Mr. John M. Hurst, master mechanic of the Salt Lake & Hot Springs Railway, has invented an improvement on the Westinghouse automatic air brake, which, in the opinion of a number of prominent railway men who recently witnessed a practical test of the device on the line of the Utah Central Railway, bids fair to create entirely new possibilities in railroading on heavy grades. The invention is nothing less than a device whereby a continuous pressure is maintained on the brakes, after the application at the engineer's valve has been made.

In the Westinghouse automatic air-brake systems, the application of the air partially exhaust the supply of air carried in the auxiliary reservoirs, and in order to recharge these auxiliary reservoirs it is necessary to release the brakes, all but a pressure of fifteen pounds, and it is during these periods when the process of recharging is going on and the brakes are not fully applied, that the momentum of the train in-

creases. That these frequent releases of the brakes is a strong element of danger in railroading in a mountainous country is witnessed by the frequent disasters that have been the result of trains running away on heavy grades. These disasters are not altogether results of faulty construction in the Westinghouse brakes, but are frequently caused by faulty manipulation on the part of the engineer.

With Mr. Hurst's device the chances of improper manipulation are eliminated. The only safeguards that the railways have against such occurrences is that of reducing the down hill load behind an engine to a given number of cars, the number varying according to the different grades that have been encountered. Mr. Hurst's device effectually eliminates this dangerous element, and it was to give railway men an opportunity of passing on its merits that General Manager McGregor recently ran a special train from Salt Lake to Park City over the Utah Central Railway, on which road the appliance has been in continuous use since last December. The party was composed of General Manager McGregor and General Superintendent Mackintosh, of the Utah Central; General Superintendent Bancroft, Master Mechanic Patterson and General Air-Brake Inspector Theo. A. Hedendahl, of the Union Pacific; General Manager Simon Bamberger and Master Mechanic Hurst (the inventor of the device), of the Salt Lake & Hot Springs Railway; Mr. I. M. Burgoon, a prominent Eastern railroad man; Mr. George Goss, formerly chief engineer of the Rio Grande Western Railway; several prominent Salt Lake business men, a number of ladies and the *Tribune* reporter. Invitations had been extended to General Superintendent Welby and Master Mechanic Lamplugh, of the Rio Grande Western, but neither of these gentlemen were present.

The train consisted of an ordinary coach and the general manager's private car, in the observation room of which two ordinary duplex air gauges were attached to the train pipes, so that the occupants of the car could at all times read the pressure carried in the main reservoir and could note the pressure in the train pipes when the brakes were applied. Engineer Arthur Edison was at the throttle, and it depended on his intelligent handling of the air whether the peculiar merits of Mr. Hurst's device should be displayed to the best advantage.

The trip up Parley's canyon was without incident, and it was not until the down grade on the other side of the divide was encountered that the air was applied, and the experts had a chance to make notes on the value of Mr. Hurst's patent. Down the long stretches of  $2\frac{1}{2}$  to 4 per cent.

grade, from the divide to Park City, the eyes of the railway men were fastened on the two air gauges in the car, and every application of the air and its result was noted. The hand indicating the pressure on the brakes would show an application of 20 or 25 pounds to the square inch, and would remain at that figure until it was the pleasure of the engineer to increase or decrease the pressure; whatever application was made, could be maintained indefinitely, and the brakes never be released for the recharging of the auxiliary reservoirs, as in the ordinary automatic brake.

The best test was given on the return trip, when the steep grades that are a feature of the Utah Central on the Salt Lake side of the divide, had to be descended. The maximum grade here is 7 per cent., and application of 40 pounds pressure were frequently necessary to keep the train under control. Whatever the application, however, the apparatus did not fail to maintain it at that figure until changed at the engineer's valve.

This performance fulfilled all the promises Mr. Hurst had made for his invention, and he was congratulated by the railway men on having so successfully surmounted the greatest obstacle of the ordinary automatic system, and one which had been attempted by intelligent air-brake specialists all over the United States.

The device does not in any way displace the Westinghouse automatic brake, as the pump, engineer's valve, triple valve, auxiliary reservoirs and brake cylinders are all Westinghouse. Its features are the addition to the regular air-brake equipment of the engine of a small cylinder and a double train pipe instead of a single, as in the ordinary brake. The addition to the cars is simply the double train pipe, and the disadvantage attached to two couplings for the double line has been overcome by a specially designed duplex coupling, by which both air hose are connected as easily as in case of the single pipe.

The purpose of the second line of pipe is to retain the air in the brake cylinder while the auxiliary reservoir is being constantly recharged from the main reservoir on the engine, without varying the brake power, unless desired by the engineer. The device also economizes in the running of the air pump, as no air is lost except when the brakes are released for the purpose of increasing the speed of the train on a descending grade.

Further, the cars equipped with the Hurst improvement can be coupled indiscriminately with cars carrying the ordinary brake, without interfering in any way with the automatic features of either.

While yesterday's trip was undertaken

for the purpose of exhibiting the practical workings to prominent railway men, it was for the more immediate purpose of obtaining an opinion from Mr. Theo. A. Hedendahl, the air-brake specialist of the Union Pacific, than whom there is probably no higher authority on air-brake matters in the United States. Mr. Hedendahl's opinion will, therefore, be accepted by most railroad men as that of a strictly impartial judge. He states that the end which Mr. Hurst's improvement accomplishes is one that has been eagerly looked for by all progressive railway men, and in his opinion there is no doubt left, since the test, but that the problem of a continuous application of the brakes by air has been solved. While he does not claim perfection for the device in all its details, he is unqualified in his opinions as to its efficiency.

Mr. Hurst has labored for years on this problem that is now so signally demonstrated, and is very naturally elated over the good opinions of the high authorities who witnessed the tests—*Locomotive Engineer's Journal*.

#### Inter-state Commerce Report on Government Ownership of Railroads.

In compliance with a resolution of the senate, introduced by Senator Pettigrew, the interstate commerce commission has compiled some data regarding the ownership of railroads by foreign governments. This is summarized as follows:

It appears that ten countries do not own or operate railways, viz.: Columbia, Great Britain and Ireland, Mexico, Paraguay, Peru, Spain, Switzerland, Turkey, the United States and Uruguay. The following governments own and operate some of the railways: Argentina, Australasia, Austria-Hungary, Belgium, Brazil, Canada, Cape of Good Hope, Chili, Denmark, France, Germany, Guatemala, India, Japan, Norway, Portugal, Russia and Sweden—18. The following governments own part of their railways, but do not operate any, leasing all the present mileage to private companies, viz.: Greece, Holland and Italy—three.

Though not inclined to be accurate, it is believed that the foregoing summary represents an approximately correct statement of the relation of the various government to the railways of the world.

#### RELATIVE CHARGES.

The relative rates charged for freight and passenger service on the government owned railroads and the other facts cited in connection with such roads are calculated to afford little encouragement to the advocates of government ownership. A comparison of passenger charges per mile shows an average in Great Britain of 4.42

cents for first-class, 3.20 for second class and 1.94 cents for third class. In France the average is 3.86 cents for first-class, 2.86 cents for second-class and 2.08 for third-class. In Germany the average is 3.10 for first-class, 2.32 cents for second-class and 1.54 cents for third class. In the United State the average charge is 2.12 cents.

The average charges per ton per mile are as follows:

	Cents.		Cents.
Great Britain . . . . .	2.80	Germany . . . . .	1.64
France . . . . .	2.20	United States . . . . .	1.00

The interest on capital invested in the several countries is as follows:

	Pr. ct.		Pr. ct.
United Kingdom . . . . .	4.1	Austria . . . . .	3.1
France . . . . .	3.8	Belgium . . . . .	4.6
Germany . . . . .	3.1	United States . . . . .	3.1
Russia . . . . .	3.3	The world . . . . .	3.2

#### SYSTEM OF OPERATION.

The system of operation of the railroads in different countries is indicated:

In Austria about 4 per cent. of the railway mileage is owned and about 73 per cent. is operated by the state. Upon the expiration of charters, not exceeding ninety years, the lands and buildings of the companies revert to the government, but the equipment remains the property of the private owners. Before a railway is opened it must be approved by the minister of commerce. The tariff of state roads are fixed by the government; those of the companies are subject to revision by the government every three years, and government has power to reduce rates if the earnings exceed 15 per cent. on capital.

In Canada about one-tenth of the mileage of about fifteen thousand miles is owned and controlled and operated by the government. For the year of 1892 the operation of the government lines resulted in a loss of over \$600,000.

At the present date by far the larger portion (about five-sixths) of the French railway system is operated by private companies, each company serving a definite territory and being comparatively free from the competition of other lines. But the railroad properties are ultimately to become the property of the government. This system is a mixed one of state and private ownership.

In Germany nearly 90 per cent. of the railway mileage is owned by the government. Under the law the government is required to manage the railways in the interest of general traffic on a single system. It may cause the construction and equipment of roads and enforce uniform traffic and police regulations.

#### IN GREAT BRITAIN.

In Great Britain and Ireland the government does not own the railways. There are stringent regulations provided by law

and administered by the railway commission and board of trade.

Italy has tried both state and private railroads, and has come to the conclusion that it is not advantageous to own and operate the railways. The result was a reorganization of the whole railway system. Under the present system private companies operate the state roads under contract with the government.

In Russia the government is stated to own and operate about 40 per cent. of the railway mileage. Nearly all of the railways owned by private companies have received subsidies from the government.

It is stated that in the United States several of the states have tried ownership in a limited way. Illinois constructed a road at a cost of \$1,000,000, but disposed of it for \$100,000; Indiana had a similar experience; Georgia owns a railroad, but found it expedient to lease it to a private company; Pennsylvania constructed a railroad from Philadelphia to Columbia, but subsequently sold it; Massachusetts, Michigan and several other states tried the experiment without success.

The inter-state commerce commission disclaims any original investigation of this subject, the report being compiled from existing sources of information.—*Roadmaster and Foreman.*

#### USES OF ALUMINUM.

Ten years ago the uses of aluminum was confined to a few articles, chiefly scientific instruments. Now the metal is employed in the manufacture of cooking utensils, dental plates, buttons, combs, brushes, boats, surgical instruments, army and navy equipments and a thousand and one fancy articles.

Germany's soldiers are to have aluminum buttons, says the *Army and Navy Gazette*. and the other metal portions of their uniforms are to be made hereafter principally of the new commercial metal.

In England a new dress fabric is to be made of peat fiber, and the Marquis of Lorne believes that the use of aluminum will also be extended to drapery goods. "since it can be drawn into wires finer than a hair and yet so flexible that they can be woven with silk." The metal is certainly remarkable for its lightness and tenacity.

Among the equipments of a polar expedition recently fitted out in England was an aluminum boat of 146 pounds, which afforded accommodations that could not have been supplied by a boat of less than 800 pounds if made of any other metal. The barometers, cups and many other articles taken on the journey were made of aluminum.

According to the *London Engineer*, experiments are to be made with a pontoon

bridge made of aluminum at the next German army maneuvers, and the *Court Journal* reports that France will soon launch a torpedo boat made of aluminum.

In France aluminum pencils are made that write on glass. A permanent tracing is made, or one which is practically permanent. It can be removed with hydrochloric acid.

In Austria a pyrotechnic mixture containing aluminum is used for obtaining a very strong light. Photographers use the mixture in photographing at night.

The price of aluminum has been going down steadily with the discovery of new processes of reducing the metal from the crude clay or ore. A quarter of a century ago the price per pound was over \$16, and as late as the early part of 1888 it sold in this country at \$8. That year the price fell to \$4 and it has been falling steadily ever since until now the metal can be bought as low as 50 cents a pound. This is quite a reduction from \$16, or even from \$8, the prevailing price less than seven years ago.

St. Louis is particularly interested in this new metal for several reasons. The largest plant in America for reducing or extracting aluminum from the ore is a St. Louis concern. Its capacity is more than ten times that of the next largest aluminum plant in the United States. We have here too, several manufacturing establishments that use aluminum in the articles they manufacture.

And, then, St. Louis promises to be one of the chief producers in this country of the ore from which the metal is extracted. Our fire clay yields from 30 to 50 per cent. of aluminum. Outside of Missouri the best deposits of the available aluminum ore are in Arkansas, Georgia and Alabama.

#### WHY WAGES ARE REDUCED.

On the heels of the official report, says the *American Machinist*, certifying to the stealings in connection with Northern Pacific dealings, comes the report of the institution of a suit to recover nearly twelve millions of dollars charged to have been "wrongfully appropriated" by means of manipulating Hocking Valley railroad bonds, and it is explained "how a syndicate made \$11,589,000 without putting up a dollar.

The same paper contains accounts of numerous business failures attributable to increasingly fierce competition, and suicides of honest and industrious men and women, discouraged at their inability to find work to do by which they could earn an honest living.

Recent events seem to be pointing to the necessity for more governmental supervision of a service which has become an ab-

solute necessity to our modern civilization, and in which there cannot in the nature of things be free competition. This governmental interference, supervision, or ownership (whatever form may finally develop) may be looked upon as a necessary evil, but it would be hard to show that the probable evil would be nearly so great as the present system of speculation, discrimination, corruption and robbery. More rascality has been uncovered within the past few years in connection with railroad management than has been connected with the postoffice department in its entire history, and there is evidence that the people are becoming thoroughly alive to the evil and determined to right it in some way.

#### RAILWAY STATISTICS.

Through the courtesy of Mr. Edward A. Mosely, secretary of the Inter State Commerce Commission, the *MAGAZINE* is in receipt of the sixth annual report of the statistics of railways in the United States for the year ending June 30, 1893.

From a summary of railway mileage, published by states, it appears that there was in operation on June 30, 1893, 176,461.07 miles of track in the United States. "This shows an increase during the year," says the report, "of 4,897.55 miles, being an increase of 2.80 per cent. The previous report showed an increase during the year ending June 30, 1892, of 3,160.78, being an increase of 1.88 per cent. over the mileage of the year 1891. The rate of increase from 1886 to 1887 was 9.08 per cent.; from 1887 to 1888, 6.05 per cent.; from 1888 to 1889, 3.22 per cent.; from 1889 to 1890, 4.78 per cent.; and from 1890 to 1891, 2.04 per cent. By a comparison of the rates of increase for the years named with the rate for the year covered by this report, it appears that railway construction during the twelve months ending June 30, 1893, stands below the average of construction for the six previous years. It is, however, in excess of the rate of increase for the accounting year immediately preceding, and probably indicates a turn in the curve of railway construction.

"The state of Washington leads in construction with 556.32 miles; Montana shows an increase of 409.66 miles; West Virginia of 365.01 miles, and Texas of 298.97 miles. The other states which show an increase in mileage in excess of 100 miles are California, Florida, Indiana, Michigan, Minnesota, Missouri, New York, Ohio, Pennsylvania, Wisconsin and Wyoming. The states of Kansas, Oregon, the territory of New Mexico, and the District of Columbia, show a slight decrease in mileage, due to remeasurement of main lines or abandonment of small, unimportant lines.

## WOMAN'S DEPARTMENT.

EDITED BY IDA A. HARPER.

Letters for publication should be directed to Mrs. Ida A. Harper, Stanford University, California.

### THE MODERN WOMAN.

The daily newspaper is perhaps the best expression we can find in regard to social conditions. It does not pretend to offer a solution of the perplexing questions but it makes a record of them, and it portrays with accuracy the general progress of people and affairs. The constant reader cannot fail to be impressed with the change that has taken place in the newspaper with regard to women. In olden times women received no special recognition and, in fact, were scarcely referred to except when sold out for taxes or advertised by some vindictive husband as having "left his bed and board." Eventually the "Woman's Corner" or the "Woman's Column" was adopted by a few enterprising papers, which consisted of various recipes for cooking, a few hints on crocheting, and some masculine advice on the care of household and children. The evolution has been rapid. To-day the largest and most influential newspapers in the country devote an entire page to subjects exclusively pertaining to women and on almost every page is more or less reading matter in regard to questions directly concerning women. One of the large San Francisco dailies, a few Sundays ago, looked as if it might be a "woman's edition." There were pictures of women on nearly every page, and if the matter directly concerning men and directly concerning women had been placed side by side, I think the latter would have occupied the greater space. There is scarcely an edition of the prominent magazines that does not contain one or several articles on the various aspects of the "woman question."

The increase in quantity of such writing is no more noteworthy than the complete change in the character of it. We still find the cooking recipes, some of them very good and some very bad; in the dead of winter a column on canning and preserving fruits; in the middle of summer, on making mincemeat and plum pudding; directions for preparing an elegant dinner in twenty minutes, although some of the articles would need two hours for cooking; how to live luxuriously on fifteen cents a day, etc. And yet, on the contrary we have a great many scientific, practical and valuable articles on the preparation of food. The directions for fancy work still occupy considerable space, and although many rooms would be improved by the absence of most of these things, and although they

can be bought about as cheaply as made, yet they serve to occupy the time of women who would not use it in doing anything more useful. The fashion articles, while sometimes absurd, are in many instances of considerable benefit, especially to women who live away from cities and have no opportunity to see the shop windows and the walking fashion plates. Since these departments, for the most part, have been placed in the hands of women, most of their absurdities have disappeared. I remember in times past, that frequently the young men in the newspaper office would come into my editorial sanctum, where I was writing perhaps an article on "European Politics" or "The Present Campaign," and ask me to help them out of the dreadful muddle into which they had gotten their fashion column or their woman's department. And then I would have a quiet smile, all to myself, over the "small capacity of the female intellect."

The most significant change, however, is apparent in the different attitude toward the pursuits, the habits, the dress, and in fact all that goes to make up the life of the modern woman. Formerly but one type of woman was recognized, the purely domestic and effeminate. All women, no matter what their ability, taste, disposition or surroundings, were forced into this mold. But of late years there has been a complete revolution. We will not refer to the entrance of women into the industrial world or into the realms of the higher education. These subjects have been fully discussed in this department, but will illustrate the point we wish to make by several examples.

This is the age of the athletic woman. The clinging-vine type, who "swooned" and "burst into tears," and prided themselves on having the consistency of a jelly fish, have faded away and a new order of womankind has taken their places. The woman who is not athletic is not "up to date." All first-class girls' schools nowadays are supplied with a gymnasium and the girls have their tennis clubs, their boat clubs and their "basket ball," which is a modified foot ball game. I was never so much impressed as this summer with the popularity of the athletic girl. The one who could ride horseback, swim, bicycle and play tennis, was the one who was in constant demand. The wives who had most attention from their husbands and who seemed to have the best time were those who could enter into every pastime, and did not have to sit on the hotel veranda all day in a rocking chair while the husbands were off enjoying life. One of the happiest couples I met were some fashionable people from New York, who had travelled over the world and had come out to California on a hunting tour among the mountains.

had been sleeping in cabins and roughing it after the manner of hunters. She would follow the hounds all day and come into the hotel dining room in the evening arrayed like a princess. The newspapers are taking up and advocating hunting as a pastime for women. The *Chicago Herald*, which is, perhaps, as representative of progress as any paper in the country, has had several long articles lately on the subject, illustrated by pictures of women in handsome hunting costumes. In a recent article the *Herald* says:

If anyone had suggested to the grandmothers of long ago that a granddaughter of theirs would handle the rifle with as much ease and skill as that exhibited by her brother, he would have been mercilessly ridiculed. One change in the girl of to-day which makes her doubly attractive is the ability to enter into outdoor sports of any kind and still retain her love and delight in everything that is feminine.

After describing some excellent cases of marksmanship, especially among Western women, the article says:

Yet all these sports are entered into in a way that is delightfully feminine. The nicer sensibilities of the woman are in no way affected by the strength of nerve and physique acquired, but rather intensified. And that indescribable charm of womanhood, a mixture of independence and still dependence, without which she is a bore to the average man, is a noticeable attribute in the sportswoman of to-day.

It is hardly probable that hunting will become universally popular among women. There is a decided sentiment among many of them that it is cruel to hunt game merely for the sport of it. The *Herald* suggests that women should learn to use firearms as a protection against burglars and because they go about so much alone nowadays. Perhaps the woman of the future will not scream at the sound of a pistol or go into spasms at the sight of a mouse.

From a syndicate article used by many large papers, entitled "Some Smart Women Whips," we learn that "this is the era of the woman and the horse," and that "in the smart set the women who cannot drive one horse or two is the exception, while many can drive a tandem or four in-hand." Well, our great grandmothers drove an ox cart and our grandmothers could take Dobbin and go to church. From this, by evolution, comes the *fin de siècle* girl holding the ribbons over her four in hand, while the public applauds. The lady driving her carriage, the girl with her dog cart are an every day sight. This summer I boarded at the house with a beautiful young lady, a belle in Chicago society. She had come to California on a pleasure trip, become fascinated with it and bought a rancho. Every morning she jumped into her cart, picked up the reins and dashed off to her rancho, where she spent the day. She was building a house, setting out lemon and olive groves and making a beautiful place, without any assistance except what she paid for by the

day. This was unheard of twenty years ago, indeed, one might say ten years ago. It is one of the many straws showing the current toward the independence of women.

The bicycle is literally a "wheel of progress." All of us recollect distinctly the protest that was made when women first began to use it. A bishop in the Methodist church published a warning to women not to "unsex" themselves by riding a bicycle. It was too good a thing, however, to permit men to monopolize. The women concluded they would run the terrible risk of being "unsexed," and now there are thousands of women in this country and Europe who are enjoying the convenience and delight of this little machine. In a short time it was found that both were seriously interfered with by the inconvenience of the conventional woman's dress, and a few progressive women set to work to devise a safer and more convenient costume. Instantly the old fogies broke forth afresh. The newspapers joined in the clamor of ridicule and denunciation. Now the women were going to "unsex" themselves for sure. They must not discard the long skirt that made it awkward, dangerous and almost impossible to mount a wheel, because, well, because it would "unsex" them. The wagger may be safely made that if any man would put on a woman's dress skirt and try just once to mount a wheel, he would be forever afterwards a strong advocate of a short or divided skirt for bicycle riders. The better class of newspapers soon recognized this need and now they use columns in illustrating the different designs of bicycle dresses and advising their adoption.

I heard a number of gentlemen, this summer, approve of the "cavalier" style of riding horseback, for women. This, of course, would necessitate the divided skirt. This question has not attracted so much attention because comparatively few of our American women ride horseback, but it has everything to commend it. The uncomfortable and unhealthy position of a woman sitting sideways, the heavy and cumbersome riding habit, making her entirely helpless in case of an accident, should have been abolished long ago, indeed, should never have been adopted.

It was the intention to give a number of other illustrations of the changed sentiments, the exploded theories, in regard to women, but this article is so long that they will have to be deferred until next month. There are innumerable instances to show that the athletic girl is having her "inning" at the close of the nineteenth century; physical exercise means health and strength, bright eyes, clear complexion; it strengthens the nerves and cures "the blues"; by bracing up the system it gives broad and

cheerful views of life; it makes all kinds of burdens easier to be borne; it cures pessimism. In thinking of all the generations of women who have known only the exercise that is found in hard work, we can but exclaim, "O, the pity of it, the pity of it."

#### LIFE INSURANCE FOR WOMEN.

This subject is beginning to attract considerable attention and the insurance companies are making investigations as to the advisability of taking risks on women. At first the sentiment was strongly against it, and they are still refused by many companies. The railroad accident companies will insure women only against death and not against accident. That is, if a woman is killed the money will be paid to her heirs, but if she is injured, no indemnity will be allowed, even if it is shown that she is dependent upon her labor for her support or that others are dependent on her. Not many of the other accident insurance companies will insure her against anything but death. A few will allow weekly payments in case of accident, if she is engaged in some wage-earning occupation, but no value is placed on her services in her own household.

One objection to insuring women is that they have no "monetary insurable interest," that is their death would cause no financial loss to anybody. Now that we have probably 4,000,000 women in this country engaged in wage-earning occupations, outside of domestic service, this objection should begin to lose its weight. A second charge is the difficulty of securing thorough medical examinations and that women will not always tell the truth about their health. Perhaps they are like the man who being asked by the judge, "Guilty or not guilty?" replied, "Your honor must find out from the evidence." A man also would conceal his physical disabilities as far as possible from the medical examiner, (unless he were applying for a pension.) The life of financial dependence that has been forced upon women, the necessity of obtaining money by begging for it or by various kinds of deception, and the fact that, by having property placed in her name and by other tricks she is made to serve as a shield for man's dishonesty, make it not surprising, if, as one writer expresses it, "many women have the idea that the foundations of business are fraud and deceit, instead of honesty and integrity."

It was supposed, for a long time that the rate of mortality was greater among women, but this has been entirely disproved by statistics. Women live to a greater age than men and the death rate is smaller. Insurance statistics show the death rate per annum in each 1,000 to be 2.45 per cent. greater among men. The fraternal orders which have admitted women have found

them better risks than men. The Knights and Ladies of Honor, which contains the largest women membership, has this testimonial from its medical examiner. "The death rate each year, without exception, has been less among women than men, and, from a medical standpoint, I would urge the order to increase its ranks as far as possible from women." The perils of maternity have been considered a vital factor in increasing the death rate among women, but these have been largely overcome by the progress in medical science. The best authorities agree that "the dangers, exposures and various vicissitudes to which males are subjected, together with the evils of intemperance, more than counter-balance the risks of maternity."

An objection which underwriters recognize as important is that "husbands insure wives for the purpose of putting them out of the way to get the insurance." A prominent writer says:

It seems that the moral risk of insuring women is far greater than the physical; not that the woman herself is morally a risk, but that the avaricious tendencies of her husband make it a hazardous experiment. Permitting a husband to put a moneyed value on his wife is fraught with danger which has not been anticipated by loving, unsuspecting wives with their husband's welfare at heart. One large insurance company discovered a great increase in the mortality of their female risks, and upon investigation came to the conclusion that men are not to be trusted.

It is men, not women, who make this charge. The evolution of women from the position of a chattel to that of an independent individual has been in progress for centuries and is not yet accomplished.

#### EDITORIAL NOTES.

Since our last writing, the New York Constitutional Convention has gone on record as opposed to woman suffrage. The suffragists decided to rest the case simply on an amendment which should give the people an opportunity to vote on the question. This the convention refused by a vote of 97 to 60. It was not asked that women might be allowed to vote on the amendment but simply that it might go before the male voters for a decision. The action of the convention cannot be interpreted in any other way than that they were afraid the measure would carry. If there had been a chance of its being voted down, this would have been the easiest way of disposing of it for a number of years. The most despotic governments pay some regard to the right of petition but in this case a petition, signed by 625,000 persons over 21 years of age, received no consideration. So large and representative a petition was never before presented to a constitutional convention. The petition remonstrating against the suffrage was signed by 15,000 names. The action of the president of the convention, Joseph H. Choate, was

a great surprise. He was on record as in favor of women suffrage and its friends were rejoiced to have him in the chair. In the making up of committees and in every possible way he used his influence against the measure. He is a candidate for governor of New York, which possibly explains it. Of the 97 votes against it, 75 were cast by Republicans and 22 by Democrats, of the 60 in favor, 33 were Republican and 27 Democratic. It will be seen therefore, that the defeat was due to Republican votes. It is not probable that any further effort will be made to secure favorable action from the convention, but the forces will be centered on the next legislature. An amendment from this source will be just as effective. The campaign has been highly educational, the suffragists are well organized, there is a wide sentiment in favor of it, and there will be a strong attempt to elect men to the legislature who will vote for suffrage. Unfortunately women have only a negative influence, the men will do the voting, and it is the voting which counts.

According to the despatches both Governor Lewelling and Mrs. Lease, of Kansas, travel on railroad passes. One of two things might be expected, either that they would cease their attack upon the railroads or decline to accept favors from them. Mrs. Lease is quoted as saying:

All this talk that the women will improve the politics of the state is foolishness. We are no better and no worse than men. Women will call each other liars on the platform just like men. They will ride on passes just like men. You will find the worst set of cat-scratching cut throats among women that you can find anywhere.

Mrs. Lease should speak for herself alone. She is reported to have called Mrs. Diggs a liar on the platform. There is no other case on record in this country of such a thing being done by a woman on a public platform. The World's Fair Woman's Congress was the largest body of women ever assembled, but there was not a word spoken during its week's sessions that was not of the most dignified and harmonious nature. The Woman's Council, with hundreds of delegates, has met several times in Washington without one word on its platform that could be criticized by the most fastidious. The Woman's Christian Temperance Union has held mammoth conventions for twenty years without any "clawings" or calling of names. The suffragists have been holding large annual conventions since before the war without a single instance of undignified language or beligerent demonstration. The World's Fair Board of Lady Managers had some excited sessions but there was no calling of names or physical contests. The women of the country must emphatically decline to be designated by Mrs. Lease as "cat-scratching cut throats"

unless she can produce some examples besides herself to prove her charges.

We have had no more significant instance of the influence of women than in the defeat of Colonel Breckenridge for the Congressional nomination in Kentucky. It is true the combined influence of the clergy was against him, and that there was a certain amount of moral sentiment opposed to him among the other men of his district, but the general comment upon his defeat was, "The women did it." By every respectable method they worked against him. Never before did women take so prominent a part in a political campaign. They worked through the press, the pulpit, the public meeting, the clubs, the prayer meetings, the homes, and they accomplished their object. If they had had the ballot themselves, they could have done it with one-half the effort. If the women in all the districts in the United States, which are represented in congress by immoral men, should make a similar fight, there would be, to put it mildly, a general uprising from one end of the country to the other. In Colonel Breckenridge's case the sin of morality was intensified by his shameless effrontery and defiance. When women can express their sentiments by means of a vote, we shall have an entirely different class of candidates, and consequently a radical reform in legislation.

The committee on pensions has reported favorably Senator Peffer's bill to pay the pension to the wife where the husband is a habitual drunkard or neglects to support his family. This ought to be done, but the bill never will receive a majority vote.

The Republican state convention of Idaho adopted unanimously a woman suffrage plank. If the American sisters can secure enough of these planks they may be able to "get in out of the wet."

#### *For Baby's Sake.*

I do wish, for the mother's benefit, there was some way to keep baby's birth a secret. Or, better, I wish everybody had sense enough to stay away, and let baby and its mother alone. It isn't the first baby and it won't be the last unless Gabriel blows his horn as soon as the event is over. Previous observation has taught me that babies are usually either girls or boys, and weigh from five to fourteen pounds. They are generally bald headed and toothless. It won't die if you do not see it at once, but its mother may if you do. It really is none of your business whom it favors, nor what color its eyes are. No doubt it is awfully cute and ugly, all babies are. I think its mother would be very glad if you didn't

call until she was able to set up; although she may be too polite to tell you so. She needs rest and quiet and so does baby. Wait a week or ten days, then make your visit short. If baby is asleep do not disturb it, if it is awake look at its clothes so you can tell exactly how they are made and the probable cost. Of course you must see its cute little feet and its fat little legs, because it might be deformed if you did not. Of course it has got the hives and will die unless you prescribe some of the nas y tea that saved the lives of your own brood. But let me beg of you do not take baby up and kiss him; baby may not like the smell of your breath, and I know many wise mothers who do not like to have their babies kissed even by their friends. Babies have some rights which people ought to respect. They belong to their parents and are not public property, admire them to your heart's content, but, hands off, if you please. Babies are all very much alike, so don't worry over the next one in your neighborhood. If you do not see it for two weeks, the sun will rise in the east and set in the west, as usual. *Mrs. M. Orrell.*

MURPHYSBORO, ILL.

#### *The Rights Women Should Use.*

What great and grand rights the women have if they only would use them for the social purification of the world and quit that senseless clamoring for more, when they already possess enough rights to make a great change by banding together into one universal society. In union there is strength. The young men, for instance, may live a debauched, fast life, and many of them laughingly remark when remonstrated with for their evil ways, "Oh! don't you know the dear girls like us only the more the worse we are?" Think how we must be deteriorating in social ideas, if the girl of the period is thus spoken of. The young ladies of a certain Eastern town set a very laudable example worthy of following by all other places. They clubbed together and made resolutions to not speak or in any way notice the male portion of the population, until they gave up saloons and all vices. There was some ridicule and rebellion among the young men for quite a while. But upon seeing the girls were firm they became very tired of their enforced retirement from all social intercourse, gave in and reformed, which I think a great victory for the ladies and shows what rights for good or evil they possess. If they all would join in expurgation a vast improvement would be the result. With better men the consequence would be a better government, and there would be no need of further advocacy of woman's going to the polls.

*Mrs. S. Pattison.*

EL PASO, TEXAS.

#### **TO THE READERS OF THE MAGAZINE.**

Dear readers of the FIREMEN'S MAGAZINE.

It is very plainly to be seen  
That in your heart has crept the thought,  
That life for me is sorrow wrought:  
That I am sad the whole year 'round:  
The joys of earth I ne'er have found:  
And in the kindness of each soul,  
With tender words you oft console  
And sympathise with me, thus sad,  
That love of man has ne'er made glad:  
And when you read my sad, sad rhymes,  
Perchance you think my heart now pines,  
And grieves and sighs o'er blighted hopes,  
(For much I write would thus denote),  
Or that, mayhap, some faithless swain,  
Has torn and rent my heart in twain,  
And to relieve my feelings, I  
Have traced in verse so tenderly,  
The soul's keen pain o'er love's defeat,  
O'er which sad tears I oft must weep:  
This is the picture you now see  
In fancy's realm, or Mrs. B—.  
And now kind friends do you believe,  
If e'er in love I'd been deceived,  
That I would write in such a strain  
The world's cold sympathy to gain?  
I'd sooner shield the soul's keen pain,  
By writing in a mirthful vein.  
The sorrows of life fall to our lot,  
Though heart and lip betray it not,  
And I, perchance, have had my share,  
Yet no greater than others have to bear:  
So I write my verses whose sad refrain  
Is echoed and re-echoed again and again  
In the hearts of earth's toilers, where rests deep  
woe.

Whose burdens are heavy tho' we ne'er may know:

And now kind friends I'll bid you adieu,  
With the wish that no sorrows may come to you:  
Many thanks for your kind words written to me.  
And, for commiseration expressed  
For your friend, Mrs. B—.

*Mrs. Nellie Bloom.*

WEST OAKLAND, CAL.

#### *A Difficult Task.*

What shall we write about? This is a question which puzzles a great many of us. An essay of the school girl type is, so to speak "out of style" now, they are read in a careless, impatient manner by the majority, or still more often entirely ignored. Something startling or sensational is the only thing that will arrest the attention of the public in general. But those, who from year to year spend their lives in one place, performing the same monotonous routine of work, varied only by attending, occasionally, an entertainment or party except they are blest with an intellect above the average how can they write acceptably? Fresh fields and pastures new furnish material for the pen wielder. The tourist who is gifted with a good memory and can write entertainingly of his or her travels, is a favored person indeed. Nothing, I think, is more interesting, or enjoyable in the line of reading than a good descriptive account of some place or places made beautiful by nature, or the skillful hand of man. The articles we have been favored with from time to time by Mrs. Harper on subjects of this kind are invaluable. She has the faculty of making one almost believe that he has really been there also.

Mr. Debs' name is at the present time very prominent, not only among railroad circles but throughout the length and breadth of the land. That his motives are pure and free from selfishness and that he is earnestly striving to help uplift the down trodden will ever be the opinion of his friend and champion, *Mrs. C. S. Miller.*

WILLARD, MINN.

[It is a pleasure to hear from Mrs. Miller again. She writes that a short time ago she was called to give up a dear little nine days old baby. I am sure that all our readers will extend sincere sympathy.—*Ed.*]

*To the Readers of Woman's Department.*

The fourth biennial convention of the Brotherhood of Locomotive Firemen enacted a law which placed upon the Editor and Manager of the MAGAZINE the task of editing the Woman's Department. What will be the outcome remains with the ladies. It is to be hoped that beginning with the January number the readers of Woman's Department will contribute liberally to its columns. It will not be necessary that the names of correspondents be published, but of course the editor must know from whom the communication is received.

Write concerning the Ladies' Society of the Brotherhood; verses that contain merit will willingly be published, but never write very long letters; they are seldom read.

W. S. CARTER,  
*Editor and Manager.*

**THE FLIGHT OF THE FLYER.**

Near where the hill-girt Hudson lay,  
Down the steel track the engineer  
Checked his swift steed at close of day,  
As, leaping like a frightened deer,  
At each wild surge she seemed to say:  
Away! Away! Away! Away!

The slow team tolling up the hill,  
The light boat drifting with the breeze,  
The swiftest trains seemed standing still.  
Red vines were twining round the trees,  
Whose leaves made golden by the frost  
Gained more of lustre than they lost.

The trackman tamping up the rail,  
Felt the perfume of dying flowers;  
The shadows lengthened in the vale;  
And watchmen watched from out the towers  
The little cloud of dust behind,  
As we went whistling down the wind.

Night's curtain falls; and here and there  
The housewife lights the evening lamp;  
And where the fields are cold and bare  
His fire is kindled by the tramp.  
Down through the midnight, dark and deep,  
The world goes by us, fast asleep.

Up through the morning, on and on!  
The red sun rising from the sea,  
As we go quivering through the dawn,  
Lights up the earth, reveals to me  
In the first ruddy flush of morn,  
The golden pumpkins in the corn.

From west to east, from shore to shore,  
The black steed tramples through the night.  
And with a mighty rush and roar  
Breaks through the dawn; and in their flight,  
Wild birds, bewildered by the train,  
Dash dead against the window pane.

"Be swift," I cried, "Oh, matchless steed,  
The world is watching, do your best!"  
With quick and ever quickening speed,  
The hot fire burning in her breast,  
With flowing mane and proud neck bent,  
She laughed across the continent.

—*Cy Warman, in N. Y. Sun.*

**THE FALLING LEAVES.**

The leaves are falling, the beautiful leaves,  
The russet, the golden, the red;  
So bright in their way, yet how short was their stay,  
It is sad but 'tis true they are dead.

The leaves are falling, the beautiful leaves,  
In a silent way speaking to all,  
In beauty to-day, to-morrow decay,  
So prepare! for like me you must fall.

The leaves are falling, the beautiful leaves,  
From their heights they come silently down  
To the mother earth that gave them their birth,  
The red and the gold and the brown.

The leaves are falling, the beautiful leaves,  
They but brighten a desolate day;  
They speak to the heart and a lesson impart.  
All are silently passing away.

# THE MAGAZINE.

Published by the Brotherhood of Locomotive Firemen on the First Day of each Month, at Terre Haute, Indiana.

**Manuscripts, Exchanges, Remittances, Subscriptions, Changes of Addresses, and all correspondence relating to the MAGAZINE, should be directed to the Editor and Manager.**

**Advertising.** Correspondence relating to advertising should be directed to Wm. N. Gates, Agent, 29 Euclid Ave., Cleveland, Ohio.

W. S. CARTER . . . . . Editor and Manager.  
W. N. GATES . . . . . Advertising Agent.

NOVEMBER, 1894.

THIRTY-FIVE THOUSAND readers will probably expect from the new editor a salutatory overflowing with gems of rhetoric, replete with promises and rosy-hued visions of the future. Thirty-five thousand readers are doomed to disappointment, sad, dispiriting disappointment. The new editor makes no great and glowing promises, paints no soul-entrancing pictures of the future.

Of course it will be his desire that the MAGAZINE shall fulfill all requirements, meet all expectations of friends; in fact, he has instituted great changes for the coming year, which, it is hoped, will redound to the benefit of the brotherhood, but prefers to let the MAGAZINE speak for itself.

## THE JENKINS CASE.

Judge Jenkins has been turned down once more. After resolutions of impeachment and investigations by congressional committees poor Jenkins is now humiliated by the decision of Justice Harlan, but, inasmuch as Judge Jenkins has a lifetime job, is beyond the reach of the American voter, he will continue to draw a princely salary and grind out injunctions as of yore. Regardless of what the law may be or that his injunctions fall flat when appealed to the United States Court of Appeals, he can, of course, do again what he did in the Northern Pacific case, be used in an emergency.

Some may say that this is all that was ever expected of him, and that this injunction which restrained the employes of the Northern Pacific from striking was never intended to be the law, but simply a process by which Henry Villard could make a

few more millions. Be that as it may the fact remains that a strike is legal. This fact was decided by the United States Court of Appeals sitting in the city of Chicago on Monday, the 1st day of October, Justice Harlan, of the United States Supreme Court, presiding. The opinion in the case was delivered by the Justice. A review of the case will lay the facts before the readers of the MAGAZINE, and show them what members of labor organizations may and may not lawfully and legally do.

In 1890 an act was passed known as the Sherman act, or anti-conspiracy act. This act and the inter-state commerce act, which was intended to restrain corporations, has been invoked by corporations to oppress laboring men, especially those engaged upon railways, and it was held: In *Re Higgins*, in the 27th Federal Reporter 44, by Judge Pardee that "the employes of the Receiver, although *pro hac vice* officers of the court, may quit their employment as can employes of private parties or corporations provided they do not thereby intentionally disable the property, but they must quit peaceably and decently. Where they combine and conspire to quit with or without notice, with the object or intent of crippling the property or its operation, I have no doubt that they thereby commit a contempt, and all those who combine and conspire with the employes to thus quit, or as officers of labor organizations issue private orders to quit or to strike, with the intent to embarrass the court in the administering of property, render themselves liable for contempt of court."

Cogley on Strikes, a recent work issued in Washington, has said "that the ingenuity of man could not conceive of a lawful strike."

In the case of *Waterhouse vs. Comer* Judge Spear, the District Judge of Georgia, said, in referring to the inter-state commerce acts and the Sherman act, that "In the presence of these statutes, which we have recited, and in view of the intimate interchange of commodities between people of several states of the Union, it will be practically impossible hereafter for a body of men to combine to hinder and delay the work of the transportation company without

becoming amenable to the provisions of these statutes."

This case was followed by what is known as the "Ricks case," and the decision of Judge Taft in the Lake Shore case. Step by step the Federal Judges encroached upon the rights of the laboring men by virtue of these statutes.

On December 19th, 1893, a petition was filed to restrain the employees of the Northern Pacific railroad company from striking. On the 22nd day of December a supplemental bill was filed in the said case restraining the employees from striking and from doing various other acts, such as destroying locomotives, injuring cars, destroying telegraph lines and committing various acts of violence. It also restrained the officers of the various labor organizations from advising with the men belonging to their organizations, from quitting the service of the railway company or communicating with them in any manner whatsoever. The men were enjoined from quitting the employment of the railroad company on the 1st day of January, 1894, or at any other time, without the consent of the court. The various labor organizations met and determined to resist this injunction so issued by the court at Milwaukee, and while they did not desire to strike out all the matters of injunction, such as that restraining the men from destroying locomotives and committing various acts of violence, yet they moved the court to modify the injunction in the following particulars, to-wit, "and to strike therefrom the words:

"From combining and conspiring to quit, with or without notice, the service of the said receivers with the object and intent of crippling the property in their custody or embarrassing the operations of the said railroad.

"From so quitting the service of the said receivers, with or without notice, as to cripple the property or to prevent or hinder the operation of the said railroad.

"From combining or conspiring together or with others, jointly or severally, or as committees or as officers of any so-called labor organizations, with the design or purpose of causing a strike upon the

lines of railroad operated by the said receivers.

"From ordering, recommending, approving or advising others to quit the service of the receivers at any time.

"From ordering, recommending, advising or approving by communication or instruction or otherwise, the employees of said receivers or any of them, to join in said strike at any time.

"From ordering, recommending or advising any committee or committees or class or classes of employees to strike or join in a strike at any time."

It was directly alleged in the bill praying for an injunction that the railroad company had no contract with its employees. Such being the case the railway labor organizations insisted that the men had the right to quit at any time that they might see proper. The court below (Judge Jenkins) refused to modify the injunction and continued the same in force for all purposes, and an appeal was taken from the decision of Judge Jenkins to the United States Court of Appeals. In the meantime several other courts had decided the various questions involved. Some decided in favor of laboring men and others deciding otherwise.

Railway labor organizations insisted that the law as laid down in Pomeroy's Equity Jurisprudence, section 1343, applied to this case. He says:

"It is, however, a familiar doctrine that courts of Equity will not exercise its jurisdiction to grant the remedy of an affirmative specific performance, however inadequate may be the remedy of damages whenever the contract is of such a nature that the decree for its specific performance can not be enforced and its obedience compelled by the ordinary processes of the Court. A specific performance in such cases is said to be impossible; and contracts stipulating for personal acts have been regarded as the most familiar illustration of this doctrine, since the court can not in any direct manner compel an actor to act, a singer to sing, or an artist to paint."

Labor organizations also claimed that the men could not be compelled to work for a railroad company, having no contract with

it, for any definite period of time and that any attempt to compel them to labor against their own inclination and wishes was contrary to the 13th amendment of the Constitution of the United States, which provides as follows: "Neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States or any place subject to their jurisdiction."

In the decision of the case by the United States Court of Appeals the court held that Judge Jenkins had exceeded his powers, and sustained the motion of the various organizations to modify the decree. The court cited the doctrine as laid down in *Pomeroy*, and reversed the entire decision of Judge Jenkins, excepting that part of it which provides and enjoins the men "from combining and conspiring to quit, with or without notice, the service of the said receivers with the object and intent of crippling the property in their custody or embarrassing the operations of the said railroad." The court sustained that part of the injunction upon the ground that if a man should quit the service of the company for the sole purpose of injuring the property of the company then in the hands of the receiver that they would be liable. If they should quit, not for the sole purpose of injuring the property but for the purpose of bettering their own conditions, then they would not be liable. The court held that they would have a right to quit under such circumstances. They have a right to combine if combining was not for the sole purpose of injuring the company, but to better their own condition, and the fact that they did so quit and did so injure the company was not the object of their quitting.

In this case, the *MAGAZINE* is informed, there is no appeal. The Supreme Court of the United States might order the case certified up to that court if they should see proper but we are informed that this is not at all probable and therefore this case settles once and for all the rights of the laboring men belonging to the railroad organizations in this country to at any time cease their employment and quit the service when he deems it proper.

### CONSOMME ARBITRATION.

The Union League Club of Chicago held high carnival a few nights since in *memoriam* of Mrs. O'Leary's cow, which bovine of the gentle sex in a moment of rudeness kicked over the lamp that set fire to Chicago away back in '71. The club's "Committee on Political Action" selected for discussion on this enjoyable occasion the subject of arbitration as being of paramount interest to the three hundred members of the Union League Club and fifty invited guests who were present. Many prominent speakers voiced opinions upon the question, whether or not the time had come when the strong arm of the law should be invoked to prevent those great social upheavals commonly known as strikes, whether or not compulsory arbitration was a panacea for those little differences that continually bob up between capital and labor. The Union League Club, the fifty invited guests, and many prominent speakers with surprising unanimity arrived at the conclusion that compulsory arbitration was not exactly what the doctor ordered.

That this elite body of social economists were actuated in their conclusions solely by unselfish motives, actuated by a love of humanity, is evidenced by the arguments and menu introduced. Of the arguments only cursory extracts can be produced, but of the menu the gentle reader shall not be deprived. While philanthropic sentiment reigned supreme, while the love of the poor and lowly hovered o'er that festal board, there was also a smell of machine oil and a suggestion of overclothes in the following:

#### MENU.

Oak Island in Half Shells.	Stuffed Olives.
Celery.	Consomme Rachel.
	Troncon of Salmon a la Joinville.
	Hollandaise Potatoes.
	Sliced Cucumbers.
Haunch of Venison a la Londonderry.	Browned Sweet Potatoes.
	Champaign Punch.
	Quail Farcie au Cresson.
	Chicory Salad.
Brie and Gorgonzola Cheese and Crackers.	Cafe Noir.

What a beautiful, typical picture of enlightened civilization! A parable of edibles! Here we see that great commoner,

the oyster, given the precedence, the place of honor, indicative of the humble makeup of the assembly. The poor man's sweet potato was given preference over the millionaire's champagne punch. The Union League Club, while invigorated with sliced cucumber, sweet potatoes and champagne punch, voted on an amendment which "opens the doors of the Union League Club to army officers located at Fort Sheridan and to officers of the navy and army happening to be assigned to duty for a time in or near Chicago." And who does not know of the undying love that army officers located at Fort Sheridan have for striking workmen?

Innocent laymen of schools of economy have, perhaps, in their innocence welcomed the idea of compulsory arbitration, taking into consideration only the effective settlement of labor disturbances. The leading speaker at this banquet quickly opened the eyes of these innocents by stating at the outset:

The settlement of labor controversies by arbitration involves many considerations outside of the settlement of the difficulty pending. Some of these considerations reach the vital questions of private property, its management, its uses and its control. The sacredness of private property even is involved in this question of industrial arbitration.

That's where the shoe pinches. A sacred right of property has been the right to collect a bounty from the consumers, form trusts by which profits are increased, reduce wages, hire Huns and Dagoes and send for the militia. Compulsory arbitration might invade upon these sacred rights.

"The first question," continued the speaker, "which will be asked is, 'shall a man carry on his own business in his own way?' This is not a new question. Some of you may remember that many centuries ago—more than twenty at least—there was a proprietor of some great vineyard who hired a lot of men one morning to work, and they worked all day. At the eleventh hour there were some men employed to work in the same vineyard, and at night, when the men came to the master for their pay, they all received wages alike: those who came in the eleventh hour being paid precisely the same as those who had borne the sweat and the toil all day. They struck, these men who had been working all day. They said: 'It is not fair that the man who has come in here and worked only one hour, the last hour of the day, should be paid the same as we who have worked all day. And the knock down argument which was made at that time was this: 'Is it not lawful for me to do what I will with mine own?'"

[Applause.] Nothing more was said at the time, as I remember the story. It seemed to be a convincing argument to the men themselves that the proprietor of the vineyard had a perfect right to spend his money in his own way, and if he chose to pay men for one hour's labor the same rate that he paid men for twelve hours, there was no fault to be found with it—at least the argument ceased then and there. But the question has been asked ever since, and in recent times it has been answered in another way than it was answered in the story I have related. [Applause.]

The audacity! The unreasonable gall of working people to ask that those who "had borne the sweat and the burden of the toil all day" should receive the same rate of pay that the lad who stood in with the boss did. If compulsory arbitration will establish standard wages in any branch of industry, take from employer the right, the sacred right, to pay who and what he pleases, what is to become of these scriptural manners and customs? It is not surprising that the Union League Club of Chicago decided against compulsory arbitration.

The first part of the speaker's address was intended, no doubt, to jolly the champagne punch and *quail farcie au cresson* part of his audience, the latter portion of the address was of an entirely different nature. The speaker said:

"Arbitration cannot settle strikes, cannot avoid them entirely, but arbitration in the true spirit is the greatest thing on earth, which is love; arbitration in that spirit can do much toward reducing the number and the severity of industrial controversies. Under the principle of arbitration—compulsory arbitration—the workman becomes a slave. We have abolished slavery in this country. Every man shall have the right and liberty to work. Every man shall have the liberty to make his own contracts. I am sorry to say that the idea of freedom of contract is too much of a fiction. If you make a contract subject to the compulsory forces of a court you have gone to a great depth of damage. It sounds well to say that there is a freedom of contract, but it does not exist. Every man must take such conditions as society law forces upon him. The laborer who works with his hands is obliged to take the wage his kind gets. If he goes into compulsory arbitration he has lost whatever there is left of the freedom of contract, because he has allowed a court of law to fix the price at which he will sell his labor. He must sell it at the price the law directs or not sell it at all. So on either hand, looking at the interest of the workman and of the employer and of the community itself, compulsory arbitration means death to industry and the enslavement of workingmen generally." [Applause]

The speaker, who was no other than Mr. Carrol D. Wright, is in hearty accord with

the idea of optional arbitration but draws the line at compulsory arbitration. Mr. Wright is a broad guaged man and has always taken a liberal view of the labor movement, but when his remarks before an audience like the Union League Club have been flavored with *Troncon* of *Salmon a la Joinville* they sound somewhat fishy.

#### THE BRAYING OF A LION.

Perhaps an enterprising showman of the Barnum type could successfully palm off on an unsuspecting public an ass disguised in a lion's skin as a genuine specimen of the *genus felis Africanus*, but there is one thing that would probably cause this experiment to result disastrously; in fact, would inevitably bring the showman to grief—the lion would bray. In the city of St. Louis there is a great daily publication that, just at present, is having paroxysms of grief because of the number of idle men in the country. This great newspaper goes into editorial spasms because the noble working-man has suffered terribly during the past depression in business. That this commiseration for the poor of the land is not affected might have passed as being real, but like the ass in the lion's skin, it could not forego the exquisite pleasure of braying. The *Globe-Democrat* gleefully recites the fact that in the city of Philadelphia there is a judge of the Jenkins calibre—a judge who has smiles for representatives of capital and frowns for representatives of labor.

Under the glaring caption of "The Walking Delegate," the *Globe-Democrat* proceeds to dissect that opprobrious gentleman as follows:

That peculiar and more or less pestiferous character, the walking delegate, has received a backset which ought to materially modify his offensive arrogance and self-importance. It was in the Circuit Court of the United States at Philadelphia, Judge Dallas presiding, where this interesting event occurred. Grand Master Wilkinson, of the Brotherhood of Railroad Trainmen, petitioned the court to enjoin the Reading railroad from discharging employees alleged to be members of said labor organization. As soon as the fact appeared that Mr. Wilkinson was not himself in the employ of the Reading railroad, Judge Dallas informed him that he had no standing in the court, and could not be allowed to interrupt the regular order of its proceedings. In other words, he was told that the court could not recognize him in his capacity as a walking delegate, assuming to represent members of the order over which he presided. The petition

was dismissed without any decision upon the issue that it involved because it was presented by a man exercising official authority unknown to the laws of the country and not entitled to the notice of the courts. And so Mr. Wilkinson went away, judicially snubbed, and admonished to mind his own business.

If Grand Master Wilkinson had been the representative of capital, had been the grand master of some commercial organization instead of an organization of workingmen, his "offensive arrogance" would not have been so painful to the *Globe-Democrat* and Judge Dallas. If a representative of the Reading railroad had "petitioned the court to enjoin" their employees from "quitting or combining to quit" the services of that company, a special train would probably have conveyed Judge Dallas to his "chambers," and an injunction would have been granted that would make the *Globe-Democrat* shed tears of joy.

In its ecstasies of delight at this Jenkinsonian action on the part of Judge Dallas, the *Globe-Democrat* gives its editorial scalpel another whet and proceeds thus:

This action on the part of Judge Dallas serves to emphasize the fact, generally overlooked by men like Mr. Wilkinson, that the labor organizations have no legal existence, and so can not claim any rights or privileges as such in the courts. They are simply voluntary associations of men engaged in given pursuits, and the officers chosen to conduct their affairs have no powers or functions that judicial tribunals are bound in any sense to respect. The walking delegate is irresponsible, like the organization that he represents. His authority is not such as justifies him in asserting himself in a case at law. He does not stand for anything that can be reached by judicial process, and so the courts can have nothing to do with him as an intermediary agent between the employer and the employe, and a specially commissioned adjuster of labor controversies. This fact should be carefully studied by those whom it particularly concerns—the members of labor organizations who habitually surrender their right of independent thought and action to the walking delegate, and fancy that they must obey him because of his official consequence. The truth is that he does not possess any legal authority, and when he goes into court for any purpose pertaining to the office that he holds, his importance quickly becomes a fiction and an absurdity.

So "labor organizations have no legal existence and cannot claim any rights or privileges as such in court." If the *Globe-Democrat* was as anxious to champion the poor man's cause as its campaign taffy would indicate, it would not have forgotten that Judge Caldwell said: "A corporation is organized capital consisting of money and

property. Organized labor is organized capital consisting of brains and muscle. What is lawful for one to do is lawful for the other to do." The *Globe-Democrat* overlooks the fact that it was labor organizations that knocked out Judge Jenkins; that upon an appeal by labor organizations Judge Harlan set aside the famous injunction restraining members of labor organizations from striking.

If a "walking delegate," that "pestiferous" character, "does not stand for anything that can be reached by judicial process," how is it that judicial processes are always resorted to by judges when they conclude to put a stop to a strike? Did Judge Ricks resort to a "judicial process" when, at his behest, "Walking Delegates" Arthur and Sargent were arrested and brought before his court for alleged connection with the Ann Arbor strike? The trouble with the *Globe-Democrat* is, the lion's skin it dons just previous to every election cannot drown its bray.

#### NATURE'S NOBLEMEN.

James Root and J. E. McGowan, engineer and fireman, are receiving the praise so richly deserved for their heroic deed in saving the ill-fated passenger train from the terrible forest fires in Minnesota; but, as usual, the fireman is overlooked entirely by many of the writers, poets, etc., who seek to immortalize the event.

All are familiar with these terrible forest fires from accounts published in the daily press, but from a personal communication from Master Mechanic Brooke, of the St. P. & D. to *Locomotive Engineering*, the following account was taken:

"Engineer Root left Duluth on the afternoon of September 1st," says Mr. Brooke, "on our limited train for St. Paul. Train consisted of combination car, one coach and two chair cars, engine No. 69, Fireman John McGowan, and Conductor Thos. Sullivan. During the previous two weeks the smoke from the forest fires was so thick in the vicinity of Hinckley that the front of the engine could not be seen from the cab in the day-time, and it was frequently necessary to run with the headlight lit in broad daylight.

"The conditions on this day were not different from what they had been contending with for a number of trips until they began to approach Hinckley, when the smoke became denser and more oppressive. They kept on, however, expecting to get through it shortly after leaving Hinckley. When within three-quarters of a mile of the station they ran amongst a lot of fleeing people, signaling them to stop, which they did. The engineer and conductor then found out that Hinckley was all on fire and the track impassable, and that our bridge right at the town was on fire.

"There was an extra freight train running behind them, but the conductor and engineer decided that it would be safe for them to back up as far as Skunk Lake, six miles back, which owing to the total absence of rain for the last three months, had evaporated down to a mere mud hole and morass. After loading up all the refugees in sight, and waiting until the cars began to catch fire, they started back. Although they ran the six miles in about eight minutes, the hurricane of flame overtook them. Almost at the start the heat bursted cab windows, pieces of glass cutting Engineer Root severely in the neck near jugular vein and in the head. The cab was on fire with flames shooting in at the windows, which, with the loss of blood, soon weakened Root so that he fell over on deck, while the fireman had gone to drop himself in manhole of tank in order to thoroughly wet his clothes, after which he came back with a bucket of water and throwing it on Engineer Root revived him and assisted him to his place again. About this time the cab curtain strings burned off letting curtain down, which immediately took fire, but was torn off by the fireman. Fireman McGowan then commenced drawing water from tank, throwing it continuously over the engineer, himself and a refugee who had crawled on the engine just as they started back, and who lay overcome in the gangway.

"With the reviving action of water, Engineer Root managed to retain his seat, while the fireman fed the firebox and operated the injector. After reaching the trestle at Skunk Lake the engineer stopped his

train, which in the meantime was all on fire, with windows all out on one side, and the train crew unloaded the passengers and got them down in the lake. All that remained in the lake were saved. Some of the refugees, however, jumped off before the stop was made, owing to the heat and flames, and were burned.

"In the meantime the fireman helped Root down from the engine to the lake, and then went back to try and get the engine away from the burning train and off the trestle. He endeavored to put out the fire on tender, but as the coal was on fire he had to give it up. He then filled the engine with water, put in a good fire, and cutting her loose from tender, ran her ahead. He then went down in the lake and spent the rest of the time caring for his engineer and others until the relief train reached them from Duluth.

"This limited train had between 125 and 140 regular passengers, and they picked up at least 200 refugees, if not more; the exact number can never be determined. The conductor, Thos. Sullivan, as soon as his passengers were unloaded, started back to protect his train and send notification of the disaster. After reaching Miller station and sending his message, human nature could stand no more, and he had to succumb to the strain.

"Our brakeman, colored porter and news agent proved themselves the right men in the right place. The porter using the fire extinguishers putting out the flames as they broke out in the dresses of his lady passengers.

"Of the heroism of Engineer Root too much cannot be said, and a close second comes his brave fireman, John McGowan, whose physical ability not only sustained himself but assisted Engineer Root to stick to his post. To give you a faint idea of the condition of affairs in that cab, the lagging caught fire and notwithstanding the rapidity with which they backed up the flames were swifter and blew back in the cab, setting front of cab on fire, burning all the wooden handles of steam connections, and melting cab lamp. Running boards were also burned as well as cab seats charred."

Mr. Brooke says "Of the heroism of En-

gineer Root too much cannot be said, and a close second comes his brave fireman, John McGowan." THE MAGAZINE agrees with Mr. Brooke on the first proposition, too much cannot be said of the heroism of Engineer Root, but that his brave fireman comes a close second, THE MAGAZINE will not admit, relying as it does upon the facts set forth in Mr. Brooke's own account, John McGowan saved the train!

#### ANARCHY IN HIGH LIFE.

The Pullman Palace Car Company had a hearing on October 3d, says a press report, before the capital stock committee of the State Board of Equalization of Illinois in the city of Springfield, which episode brings to light the fact that the Pullman people are not the only ones dodging the tax collector. The report says:

Mr. Crandon then read a long list, compiled by an expert, of large buildings in Chicago which are assessed at from 5 to 10 per cent. of their real value. The list included the Unity building, of which Gov. Altgeld is the principal owner, and there were winks and smiles when Mr. Crandon got this far down the list.

"The Unity building," said Mr. Crandon. "I believe there has been some question about that. [Laughter.] I want to make no mistake about it. Of the Unity company the authorized capital stock is \$1,000,000, all paid up. The company has issued \$300,000 of first mortgage bonds. That makes \$1,300,000. The building occupies a space of ground 80 feet on Dearborn street and 120 feet on Court alley, leased for ninety-nine years. The renting capacity of the building is about \$180,000 per annum. At 5 per cent. that gives it a valuation of \$3,600,000. But let us be liberal. Suppose it pays only 2½ per cent. on its valuation: that would make its value \$1,900,000. I understand it is assessed at \$141,800. [Laughter.]

Mr. Crandon declared property in Cook county is assessed at little over 1 per cent. of its actual value. He said he had compiled a list of the millionaires and multi-millionaires of Chicago, together with the assessment of their personal property. He would not, he said, make the list public, but would file it with the committee for the private inspection of its members. These millionaires, he said, were assessed on their personal property from \$200 to \$1,000. "And as to Gov. Altgeld's personal property assessment," said Mr. Crandon, "I tried to find it, but find that he is not assessed at all."

A member—But he is assessed down here.

Mr. Crandon—No, he is not assessed in Sangamon county, either.

Mr. Maxwell (in astonishment)—Is it true that Gov. Altgeld is not assessed in either Cook county or Sangamon?

Mr. Crandon—I examined the assessment in Sangamon county this morning, and could not find the

name of Altgeld. The county clerk in Cook county set a man to work last week, and he could not find the name.

Continuing, Mr. Crandon said that the book value of the tangible property of the Pullman company was as follows: In Illinois, \$8,466,224.51; outside of Illinois, \$45,925,852.14; total, \$54,392,076.65. On this basis he thought last year's assessment of \$1,600,500 was in excess of the assessment of other property in Chicago. The report of the Pullman company filed with the capital stock committee shows its capital stock to be \$56,000,000, paid up, \$35,430,000; fair cash value, \$133; number of cars owned, 2,576, of which sixty are in use in Illinois.

It seems that one of the "rights of property" which must be protected against the invasion of the common herd is the right to make the small propertyowners bear the burden of taxation. Here we have a "compiled list of millionaires and multi-millionaires" who are only assessed on personal property "from \$200 to \$1,000." This is anarchy in high life which is surely breeding anarchy in low life; the latter can be checked with gattling guns, of course, but from the former there is no escape.

#### DOES "IT COST TOO MUCH?"

The list of fatalities resultant from railway accidents is continually increasing. Particularly is this true with regard to enginemen. It is not surprising that old line insurance and accident companies hesitate to take what they term "extra hazardous risks," except at greatly advanced rates, yet it is a still greater surprise that the brotherhoods can insure this same class at less than one-half the amount charged by some old line companies.

The brotherhoods insure not only against death from any cause whatever, but pay full face of policy for total disability. A fireman, for a small sum, can carry a policy of \$1,500, payable at death or total disability; secure all other advantages of the organization, which advantages cannot be secured elsewhere, and in addition to this prove his manhood by sustaining an organization that has sustained him. It is sometimes said by non-union firemen that "the brotherhood costs too much," or "men on the outside get along just as well as brotherhood men." That such "dead beats" of the labor movement should be suffered to reap some of the hard earned profits of organized labor is one of the stumbling blocks

of the labor movement. If "men on the outside get along just as well as brotherhood men," and "without costing too much," it is for the same reason that "men" can get their stomachs filled at a charity entertainment and then slip out without paying, that men can draw pensions who never smelled powder.

But with all their boasts these "men" have their days of reckoning. There are but few train or enginemen who have time to read "letters;" they are too busy as a rule, even though the bearer of the "letter" be searching employment. That hearty grasp of the hand is missing, a grasp that to be appreciated must be experienced—experienced when friends are in need, among strangers, far from home, and wife and babies. These "men" enjoy a cheaper life and enjoy a cheaper death; just fifteen hundred dollars cheaper. Of course the aged mother, the weeping widow, the little toddling babies may be left in abject want, stricken with poverty, but what does that matter to these "men?"

#### WHAT ARE STRIKES?

The columns of the daily press are seldom without accounts of strikes or rumors of strikes. Hardly a day passes without something being printed about a strike, and, yet, what is a strike?

"War between capital and labor" says one, "an industrial insurrection!" says another, and last, but not least, lexicographers say that a strike is "the act of quitting work; specifically, such an act by a body of workmen done as a means of enforcing compliance with the demands made on their employer."

The latter definition is taken from the 1893 edition of Webster, and is accompanied by this quotation as a corollary:

Strikes are the insurrections of labor.—F. A. Walker.

An insurrection is a "rising against civil or political authority." Judges Caldwell and Harlan say that strikes are legal. How can insurrections be legal? In face of these incongruities what better authority could be appealed to than the great orders under whose jurisdiction strikes are conducted—labor organizations?

The representatives of capital, when involved in disputes with labor, bring into

service the lock-out, the black-list and the impoverished condition of employees, while the latter can rely solely upon the strike; therefore, labor organizations should be the best authority on what a strike is.

The "golden rule" of all labor organizations is that *no strike can take place without the consent of the majority*. If one, two, or a dozen men quit the service of a corporation without consulting the wishes of a majority in that branch of the service, it is no strike, they simply quit. If they call to their assistance, previous to quitting, the advice and services of other associates, and their grievance is not ratified by a majority, and yet they sever their connection with the company, it is no strike. If a majority decide against a strike there can be no strike, in fact most labor organizations exact a two-thirds majority vote in favor of a strike before one can take place. Then what must these great upheavals of labor that ignore all laws of all labor organizations be called? "Insurrections of labor?"

#### STILL ANOTHER.

United States Circuit Judge Woolson on October 11th decided that the Receiver can not reduce wages of employees of the Omaha & St. Louis (Wabash) Railway.

Judge Caldwell ruled in the Union Pacific case that "employees must be paid fair wages even though no dividends may be paid." Judge Woolson's decision recites the above and holds that this is law. Of course the general rule is that a court must turn the road over to the stockholders as soon as such a thing can be safely done. The retention of faithful, intelligent and capable employees is of more importance than a temporary increase in earnings, and the court would not be justified in discharging satisfactory employees because of present ability to employ others at reduced wages. The evidence shows that some of the employees are hardly able to maintain their families on the present wages. The highest and best services cannot be expected from men compelled to live in a state of pinch and want. "It is conceded by the employees that the rate of local freight enginemen and trainmen on this road are greater than on other lines with which

comparison has been made, and their wages should accordingly be reduced. The petition of the Receiver is overruled except as to these two particulars."

#### NO DIVIDING LINE.

The brotherhood knows of no geographical boundary between the United States and Canada. It is all one country to locomotive firemen regardless of what politicians may say. Speaking of some recent "campaign talk" of a prominent politician the *American Machinist* says: "It will be remembered that during the visit of the American Society of Mechanical Engineers to Montreal last June, the then recent declaration of Senator Frye that "Canadians hate Americans," attracted considerable attention and adverse criticism by the Canadian hosts of the society. Another proof that Senator Frye's declaration was not correct is found in the recent generous action of Sir Donald Smith, who, it will be remembered, took a prominent part in the entertainment of the society. He has just given the sufferers by fire in Wisconsin the sum of \$5,000, indicating that his generosity and humanity does not stop at political boundaries." American members of the brotherhood who have met and mingled with the lads from Canada, especially those members who were so fortunate as to attend the Toronto convention, can brand as false such accusations as that credited to Senator Frye.

#### CIVIC FEDERATION OF CHICAGO.

Under the above title some of the citizens of Chicago have formed what they declare "a non-partisan, non-sectarian association, inviting the co-operation of all forces that are now laboring to advance the municipal, philanthropic, industrial and moral interests of Chicago."

Under the auspices of the Civic Federation a conference will be held on November 13th and 14th for the purpose of discussing the subjects of industrial arbitration and conciliation. The first day will be devoted to "such industrial disputes as might be properly controlled by national legislation;" the second day to a "general discussion by experienced persons, representing both capital and labor, as to the best method

of arbitrating the differences so frequently arising between the two."

Mr. Ralph M. Early, the secretary, continues: "It is further expected that the conference would bring into view the methods heretofore or now employed in this or other countries, and that the information thus gathered would prove of great service in the formulating of legislative action, which, in some of the states, if not in congress, will, no doubt, be attempted in the early future. In fact it might be deemed expedient by the committee to recommend such legislation."

Grand Master Sargent has received an earnest invitation to be present, to which he responded that the Brotherhood of Locomotive Firemen will be represented at this important meeting.

#### THE RAILWAY LABOR MOVEMENT IN GREAT BRITAIN.

American railway employes, generally speaking, have little or no knowledge of what their cousins in John Bull's domain are doing. With many the opinion prevails that an employe of a British corporation can hardly call his soul his own, much less demand justice through the service of a representative committee. If American workingmen would interest themselves in the labor movement in other countries they might discover, to their surprise, that others are making great strides in bettering their condition.

*The Railway Review*, "a (British) weekly newspaper for railwaymen," carries at its mast head the assertion that "All Men Are Brethren," and is not backward in demonstrating the proposition. The *MAGAZINE* reproduces a few notes and editorial mentions from an issue of this progressive labor publication which will throw considerable light upon the relative positions of railway officials and employe in the land of our forefathers.

Students of the unemployed problem should note this. On Monday, the 3d inst., a passenger guard at London Road Station, Manchester, M. S. & L., came on duty at 5:15 A. M. and finished at 2:30 P. M., when he commenced work on the platform till 11:30 P. M. Thus he put in over eighteen hours, but he was still not satisfied. After walking two miles to his home, he enjoyed himself in luxurious ease until 3:15 A. M., at which time he began to get a special train ready.

With a little luck he could get back about 11:30 P. M. on Tuesday, and he was thus on duty over forty-two hours with less than three hours in bed. Now, we quite admit that the company ought to be punished for such a flagrant violation of the hours act, but what about the man? It is useless to disguise the ugly fact that overwork is encouraged by many employes, and this is the secret of its prevalence. Though we do not know this passenger guard, we feel sure that he has contributed to the Watkin charity appeal. Some men do not want the old system to pass away; it provides too much overtime. Nevertheless we are making it more and more uncomfortable for the selfish individual who, too cowardly to contend for better conditions for themselves and fellows, seek to add to their wages at the expense of the unfortunate out-of-workers who have none at all. It is no use railing at capitalists only, for the worst enemy the employes have is the man whose hunger for overtime leads him to sacrifice everything, even the interests of himself and family, to satisfy it. Such a policy is at once dangerous to the public and detrimental to the men, and should be condemned by all right thinking people.

Have we progressed this well in America? The companies here are not guilty of "a flagrant violation of the hours act" when they "double men out" at both ends of the road; there is no "act" against it. Are we "making it more and more uncomfortable" for men who are content to draw double pay while members of the same division or lodge are in distress for the necessities of life?

In speaking of the membership of the "Associated Society of Railway Servants," the *Review* says:

Leaving out of count four who consider themselves too old to join, we learn that there are only three signalmen and one emergency signalman in the Atherton and Tyldesley district who are outside the A. S. R. S. What an unenviable position to be sure. We wonder whether the wives or sweethearts of these men had a look at our leading article last week. It would not be a bad idea of the competitors for the splendid medallion offered for their capture to attempt to snare their birds in this direction. Somehow or other, we have a presentiment that our brothers will soon be able to bring them into the fold. It must be so lonely outside.

How does this strike you for organization? Only four signalmen in two entire districts who remain out of the fold.

Regarding recent favorable legislation, the *Review* says:

Now, a word to railwaymen on this reform which has just been introduced. The central feature of it is the part played by the Amalgamated Society. But for its advocacy and work, these two sub-inspectors would be now non-existent. This is a mere truism, and one of the many which non-unionists conven-

iently ignore. It has been trade union energy and money which have brought it about, but all the advantages which may result from the new departure will be shared by every man in the railway service. A few have sown; the many, as usual, will reap. We appeal to non-unionists whether this is fair.

A Welsh correspondent enters complaint of the "chilliness" of certain men who call themselves brotherhood men:

From information to hand, I cannot but draw the inference that at Barry, Havod, men toward men are deplorably lacking in that brotherhood of man which should stand out prominently in all trade unionists. Endeavor at all times cheerfully to carry a manly bearing in all your acts and thoughts; do not stoop to such mean, frivolous, yet despicable action, one by another: curry no favour, ye then are not bonds and tattlers in return, for, mark you, I am inclined to think that the management is totally ignorant of the feater that exists among you, and would not take advantage of it, if they did. But were you to fall in the hands of some men, what ready-made tools you would be found for your own and fellows' destruction. Thus far on this occasion and no further, and may I not, I pray, need to make my knowledge known.

#### POLITICAL HEROES.

What a pity that workingmen do not expend the energy wasted on both sides of the tariff question in securing stringent laws prohibiting "black-listing," laws that can be enforced against employers as effectually as others are enforced against employees. The season of political festivities is at hand. Many weary wage-workers will spend sleepless nights, wielding leaky torches, shouting themselves hoarse in lauding and denouncing the protective tariff; yet no flaring of flambeaus, no tramping of clubs, in the interest of an anti-black-listing law, an anti-Pinkerton law or any other law that has for its purpose the helping of the wage-earner. Who ever heard of a bank president or railway official soiling a dress suit with kerosene oil from a campaign torch? The wage-earner does all this gratuitously, but seemingly enjoys himself amazingly.

#### A SOCIAL REFORMER.

The October *Arena* is, as usual, filled to overflowing with good things. Henry Latchford in "A Social Reformer" brings prominently before the reading public one who has done much for his fellow man, Henry D. Lloyd of Chicago.

In speaking of the home life of this great reformer Mr. Latchford says: "One always meets at that home, gathered around a

table which accommodates from twenty to thirty people, rich and poor, white and black, gentle and simple, college president and seamstress, artist and mechanic, divine and layman—all on a basis of liberty, fraternity and humanity." This picture is but typical of his whole life and is an open index to his character.

Perhaps the fairest estimate, says Mr. Latchford, of his position may be formed from his speeches. On the occasion of a mass meeting in the Chicago Armory, to protest against a raid made by the police on some workmen peacefully assembled in Greif's Hall, Mr. Lloyd presided, and said at the close of his address:

Everybody is predicting revolution, shall it be a French revolution, which God in his infinite mercy forbid, or shall it be an Anglo-Saxon revolution of peace, compromise and progress? That will be a question of temper. Every noble voice that speaks to us across the civil flames and social wreckage of the past warns us not to repeat the fatal blunder of the bad temper with which faulty humanity has debated all its past difficulties.

Once upon a time there was a union of workmen, artificers in precious metals, who with toil and sacrifice found out how to make for themselves magic rings—these rings more beautiful than any kingly crown and stronger than the will of a tyrant—these rings they had but to turn on their fingers, and a mighty spirit appeared, who would execute for them any command that was honest, kind and pure. The very gods looked down with admiration upon these rings and rewarded the makers by decreeing that their descendants should be born with the rings already upon their fingers. Upon the gifts of their ancestors and their gods only one condition was imposed. They must use the rings. If left unused their power would grow less until it disappeared.

That union was the union of these United States and its walking delegate was George Washington.

The ring of citizenship is upon the finger of every American. With this ring you can break the rings of boodlers, rings of politicians, rings of money power, street car rings, gas rings, railroad rings, rings of monopoly. You must use it or lose it. If with this magic ring on your hand you drift into disaster, it must be that you prefer it.

On another occasion Mr. Lloyd, while addressing the American Federation of Labor, said:

In seven years—Jan. 1, 1891—the twentieth century will open. The eighteenth put an end, by the American and French revolutions, to the ancient regime of political and social tyranny. The nineteenth century has seen the last chain of chattel slavery broken. In seven years the century will open which, before its close, will see the social crime of enforced poverty, and the dependence of any human being upon another, for the necessities of life or the means of industry forever abolished throughout Christendom. Let us begin to make ready now for that next emancipation, that new liberty, that enlarged democracy. Let America, the leader of liberties of mankind, make the first move, and let the federation of trades unions of its working people lead America.

In conclusion Mr. Latchford says of this philanthropist: "His noble personality, his elevated character, his pen and voice and purse are now, as they have ever been, on the side of those in all countries and of every creed who suffer from what he believes to be injustice. . . . This Christian gentleman is admired by people of intellect, he is respected by rich men, and he is loved by the poor of Chicago."

## CURRENT COMMENT.

**A Worthy Undertaking.** The Railway Young Men's Christian Association of Kansas City is doing a good work in a noble cause. Their membership is large and composed almost entirely of railway men. In addition to the usual advantages of such associations, classes in penmanship and spelling, shorthand, mathematics and mechanical drawing will shortly be established solely for the benefit of railway or expressmen. In these classes the tuition is free, which will prove a blessing to those who are so unfortunate as to have been disabled in railway service. Such an institution as this should receive the support of every member of the brotherhood though he be not a professed Christian. *The Monthly Mirror*, published by the Kansas City Association, says:

Any male officer or employee of any railroad, telegraph, express, fast freight, or palace car company, or of any railway pool or commission, the Union Depot company, or either cable railway company, or the stock yards company, or of the railway mail service, who is a member in good standing in any evangelical church, may become an active member, and if not a member of any church but is of a good moral character may become an associate member. The active members only shall vote or hold office. All other privileges of the association are common to both classes of members. The annual membership fee is \$2.00. You can become a member whether you are a Jew or a Gentile, Catholic or a Protestant, Christian or unbeliever. All we ask is that you are a gentleman. For loafers, tramps, bums, men who want to use the association as a cover for their meanness, and men who want to make it a hiding place from work we will not admit at any price; though we are always ready to do our part in the work of regenerating into new life any man.

**A Center Shot.** The *United Mine Worker* hits the nail on the head and presents the facts of the case in a nut shell when it says: "The man who starts out a speech or a written article with the exhortation to workingmen to arbitrate ought to be shunned as soon as he makes the first break, for it is evident he knows nothing about what he essays to enlighten people on. Workingmen are always willing to arbitrate and don't need any persuasion on that point; it is the other side that ought to be educated on that score. When people learn that the aggressive side in this whole contention is capital they will quit shouting 'arbitrate! Don't strike!' to the workingman. The very first time we learn of a labor dispute in which the employees refuse to arbitrate we will give it due prominence, but we don't expect to hear of such a thing for some time to come. There is no need to tell laboring men to arbitrate; they are always willing to do so. Turn your batteries in the other direction, gentlemen, please."

**Dual Organization.** Union, on dividing lines of policy, results in disunion. Centralization of interests can never be accomplished through diver-

gent channels. Unity of purpose should be accompanied by unity of actions. Generally speaking, wage-earners assert their citizenship at the polls, yet in such a manner that the efforts of one half are neutralized by the efforts of the other half. Speaking of similar organizations of different policies, the *Machine Wood Worker* says:

Dual organizations in one trade are antagonistic to the best interests of the wage workers. One organization for each trade or industry is sufficient, and it is well to bear in mind that too many organizations mean the less organization.

The *Machine Wood Worker* is also responsible for the following:

When fool lecturers talk about the high wages paid American labor over European labor, the enhanced purchasing power of the dollar abroad is invariably lost sight of. If the cost of living in America averages \$10 per week and in Europe \$5, and if the wages of the European averages fifty per cent less than on this side of the Atlantic, yet they are relatively the same. In England an ordinary mechanic will earn in two days enough to pay a week's board bill. In the United States he can do no better, and as all other necessities of life are correspondingly cheap his wages are no better here than there. It is not the dollars a man receives for his labor that determines how well he is paid, so much as it is the quantity and quality of the products of others that he can secure with what he receives for what he produces.

**What Strikes Have Done.** It has become extremely popular in many quarters to cry down the efforts of organized labor. Not only from the ranks of capitalists but from labor circles comes the statement that "strikes are never won, organizations are useless." The great good done by labor organizations is ignored and particular stress is laid upon the fact that strikes have been lost notwithstanding the large expenditures of hard earned cash. These critics seemingly forget that it is the fear of a strike and not the strike itself that wrests justice from unwilling hands. The *American Federationist* says truthfully:

The number of strikes that have been averted by the trades unions can never be correctly recorded. The efforts to reduce wages and increase working hours successfully checked will be but half written. The concessions gained in the matter of wages, hours of labor, conditions of employment and legislation, are but grudgingly acknowledged and frequently unappreciated. As a matter of fact, the great victories of the labor movement are those which are achieved unheralded and unknown to the general public. They are obtained by the unions in conference with employers or their representatives in their offices and in many cases a condition of settlement being the fact that the victory should not be proclaimed to the world.

**Compulsory Arbitration.** Great opposition to compulsory arbitration comes from both capital and labor. Capital views the movement with dread, fearing an invasion of "rights of property," a curtailment of prerogatives; while labor fears the persuasive influence of a crisp bank note. If it takes a half dozen bailiffs, soul paralyzing oaths and barricaded doors to keep an ordinary petit jury above suspicion what could be expected of a board of arbitration when "intimidated" with a certified check

for a hundred thousand. If all were actuated by a sense of justice and love of fellow-man compulsory arbitration would be the proper thing and from the results of recent strikes it may be the least of two evils, certified checks notwithstanding. The *Cigar Makers' Journal* objects to the matter on general principles and says:

Compulsory arbitration means compulsory compliance with the findings and awards of such boards of arbitration, which means a complete surrender of the industrial freedom we have been able to force and hold through the power and efficacy of our labor organizations. If the principle that the state, as such, can force any of its subjects to submit to arbitration is once established in law and practice, then by the same rule and logic it can force those same subjects to accept the terms submitted, and all semblance to industrial freedom, in so far as the workers are concerned, is at once completely destroyed. Under such a régime we would be at the complete mercy of domineering capitalistic slave drivers; in trade disputes injunctions would fill the air, and not only the leaders, but the workers as well, would be arrested and tried for conspiracy, and those who resisted would be held to be traitors in open rebellion and would be treated as such. Beware of all attempts to bring about compulsory arbitration. Free and voluntary arbitration in trades disputes may be and in some cases is all right. However, the result of such arbitration is generally dependent upon the strength and ability of either side to the controversy to back up its position and demands.

**Riots vs. Strikes.** Many people confound a strike with a riot, simply because strikers sometimes lose their heads, and under the influence of excitement do things that no labor organization approves. It should be borne in mind that when a striker breaks the law of the land he is also a violator of the laws of his organization. In most instances rioting originates among the unorganized, in fact among the sympathizers instead of the strikers themselves. The *Railroad Telegrapher* delivers the following "short sermon":

Labor is the capital of every workman. If he sees fit to cease giving it to any one, and is not under contract to give it for a stated period, he can withdraw it. He can also talk to other workmen and persuade them to do likewise, but it should be remembered that the right of free speech does not give any citizen the right to trespass on the property of another citizen while exercising such right. It is also unlawful for a man to pick up a club and thump another man who applies for the work he has withdrawn from. Organized labor must fight fairly and squarely to win. Violence may secure a temporary victory, but after the battle is over the loss is greater than the gain and the victors themselves are dissatisfied for the reason that the principle involved was hidden from the eye of the world by the conflict itself and the confusion and losses incident to the same.

The *Telegrapher* also says:

When Horatio Seymour was governor of New York state a strike occurred on the New York Central railway. The road was tied up and business was suffering. Seymour was equal to the emergency. He sent for the officials of the road and said to them, "Gentlemen, this road was chartered to do the business of a common carrier for the benefit of the people of the state. I will give you just twenty-four hours to settle this strike and resume business, or I shall seize the road and operate it in the interest of the state."

Alas! good friend Horatio is dead, and his successors are not built of the same kind

of timber. In these later days of civilization, the governor generally sends for the sheriffs and adjutant general and says:

"Gentlemen, this road was chartered to do the business of a common carrier for the benefit of the people of the state. I will give these riotous strikers just twenty-four hours to go back to work and cease this invasion of rights of property, or I shall bring down upon them the entire militia of the state."

The *Foreman's Advance* reproduces from the *New York Sun* one Eccentric. of Cy Warman's poetic gems, "The Freight Train." Cy is a rhymster with a brilliant future, he can reproduce a lame exhaust to perfection; listen:

How I love to watch the local  
Winding up around the hill  
In the sunrise of the morning  
When the autumn air is still,  
And the smoke, like loosened tresses,  
Floats away above her hulk,  
And to hear the chucka, chucka,  
Chucka, chucka, of the stack.

The Union Pacific officials, noted for dealing in politics, have reformed to a certain extent by eliminating from employees, at least, this objectionable feature. In September a bulletin was posted which says: "On account of personal strife being engendered among employees by active participation in political matters, it has been decided to request all employees to refrain from becoming particularly identified in any way. Should any employee desire to accept a nomination for office of any kind, he will be required to resign from the service." In regard to this circular the *Union Pacific Employees' Magazine* expresses the following opinion:

There is nothing new about this matter. Men accepting nominations were held to be unable to do a full day's work and have their minds on a political office at the same time. It has always been a question as to the justice of such a ruling. For there are thousands of things a man could have his mind on rather than his work that would be more detrimental than running for office. Falling in love, or "getting religion" would be worse, but a man running for office usually can find plenty to do looking after his canvass but when it comes to the prevention of the discussion of politics, there is no two sides to that. A man has no time to discuss politics when at work. As far as discussing politics outside of working time is concerned, that is positively none of the business of any employer; and it never has raised as much disturbance as the discussion of the differences in religion has, which in no way pertains to the welfare of the men, being an absolute waste of time. The circular is simply advisory, it is no order, and the least attention that is paid it the better, outside of the time actually in service.

The *American Engineer and Locomotive*. The *Railroad Journal* has commenced the publication of a monthly list of accidents to locomotive engineers and firemen which, it is hoped, will draw the attention of the many readers of that excellent publication who are in official circles, to the crying need of safety appliances. The October number of the *American Engineer* reports for August 41 accidents, which list was compiled from newspaper

reports and therefore necessarily incomplete. Of this number 17 engineers and 15 firemen were killed, and 22 engineers and 15 firemen were injured, which would indicate that the running of an engine was a more dangerous occupation than firing. The causes of the accidents are specified as follows: Collisions, 14; cattle on track, 4; derailments and unknown, 3 each; land slides and struck on siding, 4 each; other causes, 1 each. The *Journal* explains the purpose of this new departure as follows:

The object of publishing this monthly list of accidents to locomotive engineers and firemen is to make known the terrible sacrifice of life and limb that is constantly going on among this class of people, with the hope that such publications will in time indicate some of the causes of accidents of this kind, and help to lessen the awful amount of suffering due directly and indirectly to them. If any one will aid us with the information which will help make our list more complete or correct, or who will indicate the causes or the cures for any kind of accidents which occur, they will not only be doing us a great favor, but will be aiding in accomplishing the object of publishing this report, which is to lessen the risk and danger to which the men to whom we intrust our lives are exposed.

With the exception of political questions there is probably no subject attracting so much interest at present as the arbitration of disputes which continually arise between capital and labor. If some means could be devised whereby strikes, expensive and obnoxious to all concerned, could be prevented by the arbitrament of a just and equitable commission or board it would be hailed with delight by working people. No one is more averse to a strike than a laboring man with a family dependent upon his efforts for sustenance. History reminds one that the American colonists were averse to their great strike, a strike that cost untold numbers of broken heads and hearts. But when no power can be appealed to for justice and right the workingman, like his forefather the colonist, strikes, and strikes hard. With him it is not a matter of choice but of necessity.

Under this head the *Eight Hour Herald* aptly says:

Never before was such wide-spread interest manifested in measures calculated to prevent strikes and lockouts as is noticeable at the present time, conciliation and arbitration being the especial measures more frequently alluded to. Reform organizations, as well as our great colleges, are contributing to the agitation, addresses, lectures and papers being delivered upon the subject without end. Public discussions on arbitration are frequently being held, while the best minds in the nation are contributing to the result of this conclusion through the medium of their magazines. Certainly some good should come of all this discussion.

Another election is upon us and Convict Labor will soon be gone and in how few localities have the working people concerned themselves about the convict system, that system prevailing in many states that brings prison made goods in direct competition with those of honest labor.

Only a short while ago the state militia of Tennessee were in the field for weeks and months to protect mining contractors who preferred to lease convicts from the state to paying their old employes twice as much wages per day as was paid for convicts. The laws of Tennessee provided for just such transactions as that and it is safe to say that but few of the thousands of working people who voted in Tennessee protested against it in the proper manner. As long as working people sustain such laws with ballots they should not attempt to repeal them with bullets.

The *Railroad Telegrapher* says concerning convict labor:

Convict labor should be used to make our country more habitable for free labor; not as a factor to drive free labor into idleness and poverty. The population of our "slum" districts is sufficiently large already. Every citizen whose labor is depreciated in value by competition with convict labor is forced from his respectable home into the tenement and enforced idleness obliges him to hide his honest face in the shadows of our cities, where the hand of vice soon chokes all honesty and love of law and order out of him.

Among the five hundred lodges of the Brotherhood of Locomotive Firemen it would not be an easy task to find one that did not include in its membership some persons capable and willing to lend interest to the *MAGAZINE* by contributing to the correspondence columns. There is nothing that brings a publication of this nature in closer touch with the members than brief, newsy letters concerning the conditions surrounding the membership. Of course, all should not write at once, but if it was necessary the *MAGAZINE* could be enlarged to accommodate these members. They own the *MAGAZINE*, it is their property. Each and every member is a stockholder, and every effort should be exerted to make this fact apparent. The *Trainmen's Journal* thus exorts its readers:

We urge our brothers to write of the industrial situation in their respective localities. There is something interesting and instructive in having the facts made known through the medium of the *Journal*, and any suggestions that would tend toward a betterment of conditions are what we need to make it valuable and readable. Anything touching on the general welfare is given attention, and we ask our brothers to tell how the situation looks and what could be done to improve matters in the section where they are located.

#### THE LABOR MOVEMENT.

On October 3rd, the Farmer's National Congress convened at Parkersburg, W. Va. The delegates, 500 in number, included many representative farmers from all parts of the country. Among the matters urged before the congress at the session were free rural mail delivery, rural telephone lines, the enlargement of the work of the weather bureau, good roads at a reasonable cost, fuller agricultural statistics, accurate crop reports, better supported and managed

agricultural experimental stations, judicious legislation effective in stamping out infectious live stock diseases, a national and systematic improvement of the waterways and such revision of railway legislation as will, while preventing abuses, remove needless interference with proper railway management.

Among the prominent men in attendance were Colonel Needham, president of the New England Agricultural Society; Judge Lawrence, president of the National Wool-Growers' Association; Mr. Bontam, president of the National Swine-Breeders' Association; Colonel Cunningham, the largest tobacco grower in the world, and O. T. Johnson, of California, the pioneer successful beet sugar producer of the country.

It is cheering news, indeed, to hear that trades unions throughout the land are coming closer together, meeting and greeting and settling differences by fraternal, yet business-like methods. During the month of September the United Brotherhood of Carpenters held their convention in the city of Indianapolis, on which occasion the Machine Wood Workers urged the Carpenter's Brotherhood to relinquish all claims on machine men, mill bench hands, etc., and to grant to the Machine Wood Workers sole jurisdiction over mill hands. The request was granted and all mill hand unions will be transferred to the Machine Wood Workers. The carpenter's brotherhood also decided that as far as possible it would aid the international union in organizing factory workers throughout the country. This is as it should be; no two organizations should claim for membership men employed in the same calling.

Terrence V. Powderly, so long the great leader of the Knights of Labor, has joined the legal fraternity. His complete knowledge of the labor question, taken in connection with his marked ability, will make his counsel invaluable in cases involving labor law.

The Central Labor Union of Nashville, Tenn., is wide awake in the protection of free labor and home industry. Upon the report becoming current that the state proposed to let the entire contract for building the new state prisons to one person or firm, and that the contractors would probably use convict labor, the union entered the following protest:

WHEREAS, It has come to our notice that the duly authorized agents of the state of Tennessee, who have in charge the awarding of contracts for the construction of the new state penitentiary, intend to "lump" said contracts to the detriment of the smaller contractors of the state of Tennessee, who will thereby be prevented from bidding on same, therefore, be it

*Resolved*, That we, the Central Labor Union of Nashville, Tenn., in special session assembled, hereby condemn the said proposed mode of awarding contracts.  
*Resolved*, Further, that we protest against the employment of convicts on said new prison, the employment of such labor on state work being inimical to the best interests of the tax-payers of the state.

A struggle long averted, but inevitable, between capital and labor, took place in the cities of New York, Brooklyn and Newark in the early days of September, resulting in a brilliant victory for the latter. That odious, poverty-breeding, sweat shop system has succumbed to the onward march of the United Garment Workers of America and another system substituted, that of weekly wages, a ten hour day and a minimum scale.

On October 3rd, the Second International Congress of Railway Workmen was held in the city of Paris, France, on which occasion there were assembled delegates from the different railway labor organizations of many countries. No report of the proceeding has been received in time for publication in the present issue of the MAGAZINE.

The United Brotherhood of Carpenters held their convention in Indianapolis in September. Hard times seems to have affected the membership of this organization as severely as many others, but its financial condition is excellent. With the finances all right, a return of prosperous times will soon bring increased membership.

The Road Master's Clerks' Association met at Chicago on Wednesday, Oct. 16th. Among the many subjects discussed were "Best Method of Letter Filing," "Best Method of Keeping Material and Tie Reports," "Best Time Book and Distribution of Labor Sheets." Sessions were held at the Palmer House.

On the first of October there were 2,000 miners out on strike at Massillon, O., 900 at Denton, Ky., 600 at Whitwell, Tenn.; all fighting against unjust reductions of wages.

The International Typographical Union held its convention at Louisville, Ky., during the past month. The officers chosen for the ensuing year were: President, W. B. Prescott, Toronto and Indianapolis; First Vice President, Theodore Perry, Nashville; Second Vice-President, Frank G. Boyle, St. Paul; Third Vice-President, Charles B. Lahan, Chicago; Secretary and Treasurer, A. G. Wines, St. Louis. The following delegates to the American Federation of Labor to be held at Denver were chosen: Wm. M. Higgins, Louisville; A.

gust McGrath, Boston, and John W. Bramwood, Denver. For trustees of Childs-Drexel fund, James J. Dailey, of Philadelphia; Alexander Duguid, Cincinnati; Henry E. Dorsey, Dallas, Tex., and L. C. Shepard, Grand Rapids, Mich., were chosen. Colorado Springs was selected as the place for holding the next meeting.

The actors of Boston recently formed a union of the theatrical profession. The many grievances which led up to this procedure on the part of actors of the Hub City are set forth at length. "The managers of many of the theatrical employment agencies," so says the *Labor Leader*, "were particularly complained of, and their system of taking 'blood' money from members of the profession seeking employment was denounced. One cause of complaint was the lack of protection from irresponsible managers who leave companies stranded on the road without making provisions for their members reaching home."

#### Unemployed Labor in France.

The latest returns of the Central Labor Office in Paris are not particularly encouraging, according to the statistics just published. In the country districts, 67 per cent. of the agricultural laborers are out of work; while in the wine districts of the Cher and Herault the number of idle hands amounts to from 75 to 80 per cent. As a set-off all but 3 per cent. of the miners and quarrymen are fully occupied. In the food trades 7 per cent. of the bakers, 20 per cent. of the cooks, and 15 per cent. of the butchers' men are without occupation. The state of things in Paris, as acknowledged by the representatives of the various trades unions, is still worse. Whereas only 7 per cent. are wanting work in the book trades in the provinces, the number is 19 per cent. in Paris, while 13 per cent. of the workmen in the leather and fur-dressing trades, 27 per cent. of the shoemaking trade, and 77 per cent. of the glove trade are out of work. It is reckoned that of the men engaged in the mechanical, spinning and weaving industries, 12 per cent. are idle; among the hand-loom weavers 31 per cent.; in the hosiery trade, 24 per cent.; in the dyeing, bleaching and sizing trades, 13 per cent.; in the lace and embroidery trades, 36 per cent.; of the upholsterers, 15 per cent.; of the tailors, 20 per cent.; and of the hatters, 16 per cent. The position of hand-weavers is getting more precarious from day to day, as, apart from the difficulty of obtaining work, by reason of overproduction in factories, they have had to submit to a sensible reduction in pay. This is particularly the case in the Department of the Maine et Loire, whereas full work is going on in the Rhone and Haute Loire.—*Exchange*.

#### TRADE UNION CONGRESS.

A Trade Union Congress was held by British workingmen at Norwich, England, during the month of September. A reading of the proceedings would put to shame the much vaunted freedom of political action among American workingmen, inasmuch as while British workmen were fraternally meeting in one representative body for the purpose of procuring favorable legislation, their American cousins were allying themselves with the different political parties, hurling epithets at each other—completely disfranchising themselves, neutralizing their efforts, by pulling in opposite directions.

This congress was made up of representatives of all trade unions and was a non-partisan political brotherhood. A parliamentary committee was elected to lobby in the interests of labor, to meet capital with their own weapons, to fight the devil with fire. If the lobby of capital succeeded in purchasing a member, the lobby of labor would see that that member stayed at home the next time the votes were counted. The MAGAZINE hopes and prays, anticipates and predicts, that the day is not far distant when American workingmen will follow in the footsteps of Great Britain's yeomanry.

From the published proceedings of this congress of trade unions the following extracts are presented, hoping that similar action will be taken by American labor organizations:

#### PARLIAMENTARY PROCEDURE.

Mr. Charles Fenwick, M. P., rose to move the first resolution on the agenda paper, which ran as follows: "That in the opinion of this congress the shameful and unpatriotic practice of obstructing public business in the house of commons has now developed to such an extent that further reform in the rules of parliamentary procedure is urgently demanded, in order to put an end to such disgraceful proceedings. We further hereby instruct the parliamentary committee to urge this matter upon the attention of the government, and request them to take such steps as will enable parliament to give effect to the wishes of the people."

Mr. Rudge seconded the resolution, which was carried unanimously.

#### CO-OPERATION.

The consolidated resolution on co-operation ran as follows: "Recognizing that the ultimate well-being of the workers depends on their being able to retain all they produce, this congress recommends all trade unionists to extend their rules so that they can be enabled to invest some of their funds in co-operative production, whereby they may be able to obtain possession of the raw material and means of production; and urges all workers to endeavor to make both the trade union and the co-operative movement a successful means towards that end; but this congress strongly condemns co-operative societies trading with non-union or black-leg firms, and asks a joint committee of trade unions and co-operators to investigate the case of Harrow-on-Soir."

This was accepted by the congress.

#### AMALGAMATION AND FEDERATION.

Mr. McManus (Belfast) moved, "That this congress is of opinion the time has arrived when, in the interests of trade unionists, there should be a general

amalgamation or federation of the trade councils of Great Britain (and Ireland) for the more effective organization of the workers in each country; a better method of enforcing their rights and privileges with regard to matters relating to labor, and whereby the combined organization can be utilized for the betterment and strengthening of trade unionism; that it be an instruction to the parliamentary committee to adopt such means as will give effect to the early carrying out of this resolution; and that financial provision be made for the payment of additional clerical and other assistance to the secretary of the parliamentary committee."

The resolution was put and carried unanimously.

#### CONSPIRACY AND BREACHES OF PEACE.

Mr. Alderman Inskip moved, "That this congress instructs the parliamentary committee to take immediate steps to bring pressure to bear upon the government to include in their program for next session a bill to amend the law relating to conspiracy and breaches of the peace." He said that none of them wished for any latitude in the eyes of the law. All they asked was that the law itself should be made clear. They remembered the Plymouth case, which cost the trade unions so much. If Mr. Robertson's bill had been carried, the matter would have been placed on a satisfactory basis. He hoped the new parliamentary committee would take the matter up.

Mr. Cort seconded the resolution, which was carried unanimously.

#### COMPULSORY INSPECTION OF BOILERS.

Mr. E. Fisher moved, and Mr. Whitburn seconded, the following resolutions: "That we request the parliamentary committee to introduce a bill to provide for the compulsory half-yearly examination and registration of steam boilers; and that the boiler attendant may have power to call for a special examination whenever he may deem it necessary." "And further, that this congress reaffirms the decision of previous congresses as to the necessity for all persons in charge of steam boilers and steam engines being required to undergo an examination, and being granted certificates to show their practical fitness for such duties; and that the parliamentary committee be instructed to introduce bills to give effect to this resolution."

Mr. Whitburn (Newcastle) begged to direct the attention of the parliamentary committee to the efforts which were being made to defeat the end which they had in view. Compulsory inspection in this direction was absolutely necessary, and steps should at once be taken by the house of commons. [Cheers.]

The resolution was carried unanimously.

#### PRISON-MADE GOODS.

Mr. Rudge moved and Mr. J. H. Walker seconded, "That the parliamentary committee be instructed to promote and support legislation to prevent the importation of all goods made or produced, either wholly or in part, in any foreign prison, gaol, house of correction, or penitentiary; also to promote and support legislation to prevent the importation of all foreign manufactured goods not bearing the mark of origin, where practical; if not practical, the purchaser shall be informed of the origin of all foreign manufactured goods offered for sale by invoice or board."

This was carried.

#### THE FACTORY ACTS.

Mr. Ben Turner (Rutley) moved, "That this congress instruct the parliamentary committee to introduce a bill at the earliest possible opportunity to amend the factory and workshop acts of 1878 and 1891, such bill to include the following points: (a) That all places wherein work for sale is made shall be duly licensed for that purpose; (b) That employers shall be held responsible for the sanitary condition of all places in which their work is carried on; (c) That owners of property, or their agents, shall be liable to a penalty if any portion of their premises be used for a workplace, unless the same has been previously licensed for that purpose; (d) That all employers shall keep a register of names and addresses

of all out-workers employed by them, and forward the same at least once every six months to the proper authorities, who shall cause the said list to be exposed in some place for public inspection; (e) That the building of backhouses in cellars or below the ordinary street level be prohibited; (f) That all employers be compelled to provide workshop accommodation; (g) That the sanitary authority for workshops be the same as for factories; (h) That the following be substituted for the twenty-fourth clause of the act of 1891: 'Shall furnish to every person, or exhibit in every room or factory or workshop in which any such person is employed, a list containing in a plain and definite form the particulars which determine the rate of wages payable for any piecework to be done by any such person in that room, and shall also furnish to every such person, on giving out work to him, a statement in writing containing a plain and definite form, the particulars of the work to be done by him that determine the amount to be paid for the work, and also the price he is to be paid for the same; and such prices that are due shall be paid from the date the work is given out: (i) That all fines, deductions, charges for workrooms, light, motive power, tools, implements, materials, or anything else, be prohibited; (j) That all laundries be treated alike in any new factory and workshop legislation.'

The resolution was carried unanimously.

#### "BLACKLEGGING."

Mr. Leonard Hall (Manchester) moved, "Any society engaged in a dispute, and considering themselves aggrieved by reason of members of another society taking the place of the men on strike, may report the circumstances to the parliamentary committee. If that body consider the said society to have a just cause of complaint, they shall appoint three of their number to act as arbitrators, who shall consider the whole circumstances of the case, and if they find the society against whom the offense is alleged to have been guilty of blacklegging, they shall suspend them from representation at congress for a term not exceeding two years, and shall also make them responsible for the whole or such proportion of the cost of the investigation as they may deem adequate."

Mr. Mosses seconded.

The discussion on this resolution was adjourned, and a long argument arose as to the position of the Irish delegates, who were nominated. The discussion was originated by Mr. David Holmes.

Mr. Crooks, L. C., on behalf of Mr. John Derlin, moved that the following words be added to Mr. Hall's resolution: "That no labor union shall allow or enforce any tradesman, following his own occupation, to join their organization; but shall encourage and advise all such persons to keep up their connection with the society belonging to their own trade."

Mr. Tylor seconded.

Mr. A. T. Dipper (National Labor Union) said this union found that four-fifths of its work was keeping mechanics out of laborers' work. [Cheers.] He went on to give instances which had come under his notice in which skilled unions had blacklegged unskilled unions. If labor unions ought not to force mechanics into joining them, surely the converse was true, and mechanics' unions ought not to blackleg labor unions.

Mr. Maddison (iron-molders) replied to Mr. Dipper. He was proceeding to complain of some things done by the latter's union, when Mr. John Ward rose to order. He thought these discussions between different unions added nothing to the dignity of the congress. [Cries of "Vote."] The previous question was moved by Mr. Andrew Clark, and carried.

#### EMPLOYERS' LIABILITY BILL.

Mr. J. E. Collins moved, and Mr. Bowers seconded, "That the parliamentary committee be instructed to press upon the government the necessity of at once re-introducing the employers' liability bill."

Mr. Ward moved the suspension of the standing orders so that the whole question might be discussed.

Mr. Will Crooks moved an amendment: "That this congress heartily approves of the employers' liability bill as introduced to parliament in the last

session of the house, containing as it did the principal points for which we as workmen have contended for years: the most important being the provision against contracting out of the act, without which no measure will be acceptable to the workers of the United Kingdom. We, therefore, call upon the government to re-introduce the measure, and further instruct the parliamentary committee to insert a clause making employers financially and criminally liable for all accidents caused by defective plant and machinery." He said that to hear Lord Dudley and others talk, one would think that the only reason why they wanted an employers' liability bill was because they wanted the money to have a good "flare-up," not caring whether they got a broken leg or a broken head. Of what use to a man was £500, or his widow, if he got killed? He wanted to see employers made criminally liable for all defective plant and machinery.

Mr. P. Curran seconded the amendment, which was carried unanimously.

#### ALIEN IMMIGRATION.

Mr. Alderman Inskip (Leicester) moved, "In view of the injury done to a large number of trades and trade unions by the wholesale importation of destitute aliens, this congress calls upon the government to take the necessary steps, either by bill or order in council, to prohibit the landing of all aliens who have no visible means of subsistence." He desired to point out that they were taking a serious responsibility in asking the congress to pass such a resolution. But the time had arrived when it was absolutely necessary to protect British workmen from the aliens who cared not at what price they worked. In Manchester, work which was five years ago done for 3s 6d, was now done for 1s. 2½d. ["Shame!"] He had no wish to take away the right of political asylum which existed in England, but he did ask that those who were willing to take work at starvation prices should be prevented from landing, as was now done in America. The results of all their work as trade unionists in the tailoring, boot-making and cabinet-making trades was slipping through their hands and if something was not soon done, the wages of workmen in England would descend to the Continental level. [Cheers]

Mr. Inskip's resolution was put and carried by 143 to 73. [Cheers]

The above quotations from the minutes of this meeting will enlighten the reader upon its object, and when it is taken into consideration that this congress is made up of representatives from all classes of trade unions, it will be seen with what unanimity they act in political matters.

The city of Cardiff, Wales, has been selected as the next meeting place, and the MAGAZINE hopes to give a complete account of same.

The labor conferences held in Philadelphia April 28th, and St. Louis June 11th, were movements in the right direction. The future has much in store,—an American Labor Congress will be the outcome.

#### JUDICIAL DECISIONS.

##### REASONABLENESS OF REDUCTION OF WAGES BY RECEIVER.

A railway company, whose sole property was the equipment and leasehold of another road, passed into the hands of a receiver. The annual rent was the first lien on the equipment, and the leasehold was subject to forfeiture for nonpayment of rent. Owing to general business depression, the earnings of the road fell off, until

they were not sufficient to pay the rent, and the receiver ordered a reduction of ten per cent. in the wages of all employees. It appeared that a like reduction had been theretofore made by competing roads, and that, in order to avoid discharging many employees, the receiver had been compelled to lessen the working time of each one. Held, that the reduction was not unreasonable. Where a ten per cent. reduction of wages is reasonable in itself under all the circumstances and the general condition of trade it is not rendered unreasonable by the fact that his employees were already working on short time, with a proportionate reduction of wages; the shortening of time having been directed with their own consent, in order to avoid the discharge of many of their number.

Thomas vs. Cincinnati, N. O. & T. Ry. Co. (Circuit Court, S. D. Ohio, W. D.) 62 Fed. Rep. 17. (192).

##### DUTY AND LIABILITY OF EMPLOYER.

It is the personal duty of an employer to use ordinary care that the machinery necessary to conduct his business is maintained in a reasonably safe condition for use. The delegation of that duty to subordinates does not bring the latter into the relation of fellow servants, within the rule of exception as to employees injured by reason of a breach of that duty. The master must use reasonable care not to subject his employee to an extraordinary risk in the service, unknown to the employee. When an employee sustains injury by the combined negligence of a fellow servant and of the master, the latter cannot, on that ground alone, avoid liability.

Browning vs. Wabash Western Ry. Co. (Supreme Court of Missouri). 27 S. W. Rep. 644. (117).

##### LIABILITY FOR NEGLIGENCE OF FELLOW SERVANTS.

Railroad section men and laborers on repair trains, employed by the same master for the same general purpose of keeping the roadbed and track in order, and working for the same general result, are fellow servants; and the employer is not liable for injuries to one, caused by negligence of another, even though such other has supervision over either gang of men.

Thom vs. Pittard. (Circuit Court of Appeals, Fourth district). 62 Fed. Rep. 232. (68).

##### CONTRIBUTORY NEGLIGENCE BY SERVANT.

Where one who had been employed as brakeman for several months, was placed on a car in order to give the necessary signals to the engineer of a train which was being loaded with crushed stone. The dust of the crusher interfered with his view of the engineer, and he got down from the car and stood on the main track. After stand-

ing there about five minutes he was struck by a passing engine. There was nothing to interfere with his observation in each direction. It was held, that he was guilty of contributory negligence.

Clark vs. New York, L. E. & W. R. R. Co. (Supreme Court, General Term, Second Department). 30 N. Y. S. 126. (99).

The Supreme Court of Minnesota holds, that the rule that one who attempts to cross or places himself upon a railroad track without looking and listening, when, by so doing, he may discover the danger from an approaching train, is guilty of negligence, does not apply to the case of one who is employed in a railroad yard, and whose duties frequently make it necessary for him to go upon the tracks. Where, in a railroad yard, there are tracks of several companies, and the employees in the yard of one company are accustomed to go, in performing their duties, upon the track of another, the jury may find a license from the latter to do so.

Jordan vs. Chicago, St. P. M., & O. Ry. Co. (59 N. W. Rep. 633). (117).

#### LIABILITY OF MASTER FOR INJURY TO SERVANT.

If an employee is injured while in the service of his employer by negligence of a co-employee engaged in the same general employment, when the master has exercised reasonable care in the selection of the co-employee, the employee who is thus injured cannot, as a general rule, recover damages of his employer. But this rule has no application in a case where the master owes a duty to the servant directly. In such a case if the master entrusts the performance of that duty to a fellow servant, the negligence of the latter is the negligence of the master, and the master is liable to another servant who is injured by such negligence.

Blondin vs. Oolite Quarry Co. 37 N. E. Rep. 814. (125).

#### LIABILITIES OF RAILROAD AND TELEPHONE COMPANIES FOR INJURIES TO BRAKEMAN.

Where a brakeman in the employ of the receiver of a railroad company is injured, without fault on his part, by being thrown from a freight car by a telephone wire which the telephone company negligently allows to hang too low over the railway track, and the receiver and telephone company knows, or by ordinary care and diligence might know, the condition of such wire, both the receiver and telephone company are liable to such brakeman for damages sustained.

Southwestern Telegraph and Telephone Company vs. Crank. (Court of Appeals of Texas). 37 S. W. Rep. 38. (89).

#### STATUTORY PROVISIONS FOR INJURIES TO EMPLOYEES OF RAILROAD COMPANIES.

Comp. Laws Kan. 1879, making a railroad company "liable for all damages done to

any employee of such company in consequence of any negligence of its agents, or by any mismanagement of its engineers or other employees," having been construed by the Supreme Court of the state as not limited to injuries caused in the movement of trains, is properly applied, in the Federal Courts, to a case where one employee was injured by negligence of another while both were engaged, in a roundhouse, in putting a recently-arrived engine in condition for immediate use.

Chicago, R. I. & P. Ry. Co. vs. Stahley. (Circuit Court of Appeals, Eighth Circuit). 62 Fed. Rep. 363. (103).

The Supreme Court of Pennsylvania holds that the provision of a membership certificate in a benefit association, made up of the employees of a railroad company, under which the benefit becomes due to the member whenever he is disabled from any cause, that acceptance of benefit shall be a release of the railroad's liability for the disability, is not against public policy, it not having the effect of a release till the member accepts the benefit.

Johnson vs. Philadelphia & R. R. Co. 29 At. Rep. 854. (76).

#### LIABILITY FOR INJURY TO RAILROAD EMPLOYEE.

In an action by an engineer against a railroad company for personal injuries caused by the negligence of a brakeman, it is proper, after giving evidence that the brakeman had been drinking just before the accident, to show his reputation for intemperance, for the purpose of charging the company with knowledge of his intemperate habits.

Norfolk & W. R. Co. vs. Hoover. (Court of Appeals of Maryland). 29 At. Rep. 994. (61).

#### CONSTITUTIONAL LAW FOR PROTECTION OF RAILROAD EMPLOYEES.

Laws 1893 entitled "An act to compel street railway companies to protect certain of their employees from the inclemency of the weather," is constitutional.

State vs. Hoskins. (Supreme Court of Minnesota). 59 N. W. 545. (31).

#### CONTRIBUTORY NEGLIGENCE IN DISOBEYING INSTRUCTIONS.

Where a railroad employee is injured in consequence of his failure to signal a train to stop, as his instructions required him to do, he is guilty of contributory negligence.

Le Bahn vs. New York Cent. & H. R. R. Co. (Supreme Court, General term, Third department). 30 N. Y. S. 7. (35).

#### LIABILITY IN HANDLING DISABLED CARS.

Where an employee handling a disabled car, which was being transported to the shop for repairs, and having the control of the action of the engineer, steps between the cars, on which the disabled car had no

drawhead, is injured, he cannot recover for such injury, as he knowing the danger was negligent in placing himself in such a position.

Illinois Cent. Ry. Co. vs. Bowles. (Supreme Court of Miss.) 15 So. Rep. 138. (66).

#### WHO MAY BE FELLOW SERVANTS.

A train dispatcher, employed by the division superintendent, though he has power to employ and discharge brakemen and flagmen, and has general charge of the movement of trains, is a fellow servant of an engineer, who is also subject to the instructions of the division superintendent.

Norfolk & W. R. Co. vs. Hoover. (Court of Appeals of Maryland). 29 At. Rep. 994. (51).

The Supreme Court of Tennessee holds, that the mere fact that a car inspector goes on one track in order to inspect cars going on another—such track being an appropriate place to inspect cars from—does not render him guilty of contributory negligence, so as to prevent a recovery in case he is injured through the negligence of an engineer running a switch engine on the track on which he is standing, though he knew a train was likely to pass along such track.

Taylor vs. Louisville & N. R. R. 27 S. W. Rep. 663. (86).

#### Contributors and Correspondents.

An earnest invitation is extended to all members and other readers to contribute to the columns of the MAGAZINE. Within the ranks of the Brotherhood of Locomotive Firemen there are endless numbers of members who have the ability to write intelligently upon subjects pertaining to mechanics and other matters interesting to the membership at large.

It is not necessary that contributors should sign their names to articles for publication, a *nom de plume* or simply the initials will do. But, of course, it is necessary that the editor should know with whom he is dealing, therefore your full name and address should accompany each communication. Write concerning the condition of your lodge, enclose newspaper accounts of special occasions, such as balls, picnics, etc. It is the purpose of the editor to make the MAGAZINE just what its name indicates, a locomotive fireman's magazine, pure and simple. It is edited by a fireman and read by firemen, and it is hoped that members of the firemen's brotherhood will leave nothing undone to promote its welfare.

#### Recent Publications.

STEAM TABLES AND ENGINE CONSTANTS. BY THOS. PRAY, JR. D. VAN NOSTRAND CO., 23 MURRAY ST., N. Y. PRICE \$2.

The readers of the MAGAZINE will recognize in the author of "Steam Tables and Engine Constants" an old friend and contributor. This work contains original and up to date information and is a valuable reference book for those engaged in mechanical engineering. Of the many subjects treated are the following: Ratio of Expansion; Cut-off, etc.; Heat Units in Water 32° to 212°; Factors of Evaporation; The Economy of Feed Water Heating; Heat of Steam; Engine Constants; The Efficiency of Burning Coal; etc.

AID TO ENGINEER'S EXAMINATIONS. BY N. HAWKINS. THEO. AUEL & CO., 91 LIBERTY ST., NEW YORK.

"Hawkin's Aids" is just what its name indicates, being a complete summary of the principles and practice of steam engineering arranged for reference catechetically. The author says: "Men often operate steam plants satisfactorily who can not tell how they do it, and a thorough practical engineer may make a very poor showing when questioned by an examiner."

#### The International Railroader.

The above named publication, Messrs. D. G. Ramsay, manager; A. J. Arkin, editor and A. D. Thurston, general agent, pays its first visit to THE MAGAZINE and is a welcome guest. As its name indicates its geographical and social range is international in character. The *Railroader's* columns are filled with crisp railway news and editorial comment.

#### Machinery.

Vol. I. No 2, of *Machinery*, "A practical journal for machinists and engineers and all who are interested in machinery," has reached this office and is a typographical beauty. The Industrial Press of New York City are the publishers and Fred H. Calvin is editor-in-chief. May success attend their efforts.

DONAHOE'S MAGAZINE, in the October number, propounds the query, "Which Party Should the People Support in November?" In this triangular debate the Democratic party is represented by Josiah Quincy, the Republican party by Eliot Lord and the People's party by George H. Cary, candidate for governor of Massachusetts on the latter named ticket. The discussion is interesting, although only a "four round contest for points."

# THE BROTHERHOOD.

TO CORRESPONDENTS.—Brief, newsy letters are desired upon subjects of general interest. Sign name and *nom de plume*, the latter for publication.

## FAREWELL TO THE BROTHERHOOD.

Byron sang:

"Farewell! a word that must be and hath been;  
A sound which makes us linger; yet Farewell!"

And Shakespeare says:

"Fare thee well  
The elements be kind to thee and make  
Thy spirits all of comfort."

Having severed my connection with the LOCOMOTIVE FIREMEN'S MAGAZINE, it suits me to ask for so much space in its columns as will suffice to say farewell to its readers and to the brotherhood.

My connection with the MAGAZINE began in September, 1878, when, at the Buffalo convention, I was elected associate editor. In 1880 I became editor, and resigning the position at the Harrisburg convention in September, 1894, makes a continuous service of sixteen years. Such dates are in the line of reminiscences, and considering the age of the brotherhood, have a touch of ancient history.

I took charge of the MAGAZINE during "the times that tried men's souls," their courage and their fidelity. The brotherhood was bankrupt and the outlook was gloomy. The supreme demands were courage to fight its battles and confidence that success would be achieved. It was not long before the skies began to brighten, clouds rolled away, victories were recorded all along the line, and there was never a battle for the right that the MAGAZINE did not participate in, seeking always the place where the fight was fiercest.

I began my career as editor with a monthly circulation of less than fifteen (1,500) hundred, which steadily increased until a circulation of thirty-seven (37,000) thousand copies per month was reached.

It would be rank egotism to claim the credit of such success, but this may be said, the MAGAZINE kept fully abreast of the most exacting requirements of changing conditions, and if the brotherhood grew, the MAGAZINE helped it to grow. It championed every new demand for intellectual advancement and gave to its various departments the best thought it could command and was more widely quoted than any publication of its class in the country.

For my successor, in the responsible position the late convention assigned him, I shall confidently hope for a large measure of success. Ready, studious and capable, he will have a wide field for the display of his learning upon the various subjects relating to the welfare of labor. Brother

Carter will, I doubt not, put forth his best efforts to make the MAGAZINE a power in the labor literature of the country, and most cordially do I bespeak for him the good will and consideration of the brotherhood.

In severing my official relations with the brotherhood, I think of the grand lodge officers with whom I have been associated during the past sixteen years. Of the Grand Masters there have been Joshua A. Leach, W. R. Worth, Frank B. Alley, W. T. Goundie, F. W. Arnold and F. P. Sargent; Grand Organizers S. M. Stevens and John J. Hannahan. Of these, Brothers Sargent, Hannahan and Arnold are still on the deck of the brotherhood ship, and as

"I remember all  
The friends so link'd together,"

I confess to feelings which betray emotion and ask, when shall we meet again, and as wearied hopes expire, I content myself in believing, if not in the whirl and bustle incident to official life, still in "Fancy's wide domain" we shall meet again.

True it is that our pathways diverge and true it may be, nevertheless, that we may work on chosen lines for the amelioration of the condition of men in the railway service of the country.

And to the rank and file, to the old battle-scarred veterans with whom I have tramped from valley to highland, with whom I have sat around our lodge fires and conned our plans for triumphs—I send them all greetings of "Auld Lang Syne." They are to me what "John Anderson, my Jo John" was to Burns—and to them I say farewell with my heart in my mouth. In relinquishing my position as editor of the MAGAZINE I abate not a jot of my esteem for the *true* men of the brotherhood. They have been, and are, my friends "without variableness or shadow of turning," and I shall be theirs until my days are ended.

"Here's a sigh to those who love me,  
And a smile to those who hate;  
And, whatever sky's above me,  
Here's a heart for ev'ry fate."

EUGENE V. DERS.

TERRE HAUTE, IND., October 13th, 1894.

## CHANGE OF FISCAL YEAR.

Pursuant to laws enacted at the Harrisburg convention, relating to the change of the beginning of the fiscal year from August 1st to July 1st, it will be necessary to change the beginning of the quarters one month earlier. Collectors will collect as usual on or before November 1st, 1894, for quarter ending January 1st, 1895 (this under the old law). Circulars of instruction will be issued requiring the collection of two thirds of a quarter's dues on or before February 1st, 1895, under the new law, at which time collectors will issue receipts for the quarter ending March 31st, 1895.

## THE NEW LAWS.

Of the amendments to the present constitution adopted by the Harrisburg convention the new beneficiary law is probably the most important. After January 1st, 1895, any member of the organization passing the medical examination can carry insurance of five hundred, one thousand or fifteen hundred dollars. The details of the beneficiary law will be arranged by the Grand Executive Board, acting in conjunction with the Grand Master and Grand Secretary and Treasurer, at a special meeting to be called by the Grand Master. At this meeting also will be decided to what city the grand lodge of the brotherhood will be removed. The convention decided, with no opposition, that such action was essential to the welfare of the order, but left to the grand officers and grand executive board the election of a city offering the best inducements.

Another important law enacted was the provision for three Vice-Grand Masters instead of one as at present, and the creation of the office of editor and manager of the MAGAZINE, the MAGAZINE department being entirely separate from the Grand Secretary's, but all departments and officers under the general supervision of the Grand Master.

The new constitution provides that the loss of hand at or above the wrist or loss of foot at or above the ankle will entitle member to beneficiary claims. The following resolution also passed which goes into effect immediately, therefore is the law now:

"A beneficiary member in good standing who shall be totally and permanently incapacitated from performing manual labor by reason of the following diseases, to-wit: Consumption, Bright's disease of the kidneys, or total and permanent paralysis, shall be entitled to the full amount of his beneficiary certificate, providing that all claims arising under this section shall be referred to the grand lodge officers, etc. This law shall be of full force and effect immediately upon its passage."

The beginning of the fiscal year shall commence on July 1st instead of August 1st, as at present.

The committees on beneficiary claims and on constitution and by-laws shall meet at least three days in advance of the conventions in order to have reports ready when called for by the convention, and all amendments to the constitution and by-laws shall be forwarded to the grand lodge office by the subordinate lodges at least sixty days previous to convention.

Members expelled for non-payment of dues may be reinstated by subordinate lodge within thirty days without special dispensation from the Grand Master.

Orders for the secret work will be entered in a printed form on the back of members' receipts for dues.

No member of any other labor organization shall hold the position of a grand officer of the brotherhood.

Striking firemen shall be allowed \$25 per month for three months only.

Strikes may be declared off by the Grand Master with the consent of a majority of the members of the grand executive board.

The Grand Master shall prepare a new ritual to go into effect on March 1st, 1895.

There were 104 death and disability claims acted on. Of this number ten were allowed for \$1,500 each, one for \$1,000 and one for \$338. The remaining claims were either rejected or referred to grand officers for examination.

Resolutions passed recommending the holding of union meetings with other labor organizations, calling on members to sustain all contracts made by the brotherhood and protesting against sympathetic strikes.

Mr. H. N. Norton, an ex-member of Lodge 145, was elected a grand honorary member of the brotherhood.

The next convention will be held in Galveston, Tex., on the second Monday in September, 1896.

The following is the list of grand officers elected for the ensuing two years:

Grand Master—Frank P. Sargent.

First Vice-Grand Master—John J. Hannahan.

Second Vice-Grand Master—Charles A. Wilson.

Third Vice-Grand Master—Charles W. Maier.

Grand Secretary and Treasurer—Frank W. Arnold.

Editor and Manager of Magazine—William S. Carter.

Board of Grand Trustees—Wm. F. Hynes, Alex. H. Sutton; A. H. Hawley.

Grand Executive Board—Eugene A. Ball, H. N. Lamb, Asa Dillon, F. J. May, D. J. Byrne.

## ADDITIONAL GRAND OFFICERS.

In addition to the creation of the office of editor and manager of the MAGAZINE, the Harrisburg convention added to the list of Grand Officers the positions of Second and Third Vice Grand Masters. The necessity for these additions were pointed out very plainly in the Grand Master's report. He said: "For a long time I have realized that there was a necessity on the part of the grand lodge of closer attention to subordinate lodges; that it is necessary that lodges of our brotherhood be visited at least once a year; that to allow a lodge to go without a visit from a representative of the grand lodge for an indefinite period causes the membership to

lose interest and a falling off in attendance at meetings, and finally the lodge begins to think that the grand lodge has no interest in them. \* \* \* What we need at the present time is additional grand officers in the field to visit subordinate lodges, to encourage our membership, to visit railway officials, talk with them about the brotherhood and endeavor to overcome that ill feeling that has been created during the past ninety days by the hasty action of many of our members. There will be many new lodges to organize during the coming two years. Members are coming back who have left the order and there will be a process of rebuilding going on throughout the country."

The sentiment voiced by the Grand Master in his recommendation was in accord with the wishes of the delegates, and from January 1st, 1895, the Brotherhood of Locomotive Firemen will begin a new era in its progress. Our watchword will be "upward and onward." We will set our faces toward the rising sun and have no heartburnings for that which has been. We will live for the future, profiting by the past.

The Harrisburg convention could not have decided more wisely than when they selected Bros. Chas. A. Wilson of No. 12, and Chas. W. Maier of No. 24, to aid the Grand Master and First Vice Grand Master in carrying on this work. The many years of efficient service of these two brothers places them in positions that requires no introduction of them by the MAGAZINE. The membership will find in Bros. Wilson and Maier men whose enthusiasm in their work will be contagious—even to those members who haven't seen inside of a lodge room since they were initiated.

On the first day of January Bros. Wilson and Maier will begin their new work in territories assigned them by the Grand Master, and the MAGAZINE predicts that they will receive a hearty welcome.

#### CONVENTION NOTES.

Bro. Charles W. Maier, Third Vice Grand Master, and his little daughter, Josie, of Parsons, Kas., did New York to a finish. Charlie was "chaperoned" by Bro. Al. Hawley of No. 149, and was in excellent hands. After walking Al's legs off up to the knees Charlie said that he would come again to the metropolis and look it over well, and if he liked it he thought he would buy it and take it out to the Territory.

The fraternal feeling that exists between members of the federated orders of railway employees was demonstrated in a happy manner by the many cordial courtesies extended to delegates by the Harrisburg members of the O. R. C., B. L. E. and B. R. T. It suggested the idea of our forefathers, "*E pluribus unum!*"

Very important duties are assigned to the present Grand Executive Board before its retirement. The convention instructed that when called by the Grand Master the board should convene in Terre Haute, and in connection with the grand officers prepare the amended features of the insurance law for publication and also to select a future location for the Grand Office of the Brotherhood.

At the union meeting held September 22d under the auspices of Just-in-Time and J. F. Bingham lodges of New York City a large crayon picture of Grand Master Sargent was decorated with two new brooms. It was quite appropriate. Bro. Shime of Just-in-Time lodge says "its a good thing—push it along."

Bro. Springweiler, of No. 241, was a welcome visitor at the convention. He has been prominently identified in the past in securing legislation favorable to working-men and has been actively engaged during the past summer as a member of the New York state constitutional convention at Albany.

If anybody should ask him Bro. Fred Keeler of the Grand Executive Committee, could tell a very interesting fairy tale as to how a lion at Hagenbach's circus, in New York City, was the medium through which he became acquainted with a lady of the swell 400, don't cher-know.

Harrisburg's hospitable reception could not have been surpassed and if Galveston thinks anything of her reputation as a convention city the members of 115 will have to get down to business early in the season.

The W. D. Robinson fund was placed in the hands of a committee consisting of Grand Master Sargent, Bro. E. V. Debe, and a committee of two to be appointed by the Grand Master.

Huber wore the "convention rooster" on the lapel of his coat from Cincinnati to Harrisburg and Finnegan bore the trophy to Texas for his Galveston colleague.

Bro. Harry Walton received a unanimous vote of thanks for long and efficient services on the Grand Executive Board, a compliment well deserved.

Bro. C. A. Wilson, 2nd Vice Grand Master elect, is an ideal Grand Chaplain, a second Beecher, a Talmadge in overclothes.

His high silk hat, poetic productions and sylph-like form won for Bro. Alex Sutton the admiration of the ladies.

Powderly, Clark, Gompers, Everett and other noted labor leaders joined the fire-boys in having a good time.

The city of "O'Rourkeville" got one vote for the next convention.

It remained unsettled who was entitled to the appellation of "The Texas Steer," Fred Keeler or Charlie Turner. Both claimed to be the original and all others spurious imitations.

The Pennsylvania Railway Company entertained the delegates royally with excursions to the battlefield of Gettysburg and to Steelton.

Secretary of the Inter-state Commerce Commission, Edward Mosely, was a welcome guest of the brotherhood.

The Lehigh men have an eloquent and earnest friend in Bro. Frank Hocking of 507.

The Committee on Welfare of the Order were ready to report early and often.

The delegates should not forget their resolution to buy union made goods.

Hawley and 149 represent an entire block of the brotherhood.

Shandy McGuire has lost none of his popularity.

#### TO SUPT. BOGART, SCRANTON, PA.

My dear Bogart, I've long had an inkling to fling  
A few stanzas of rhyme at your head;  
So to-night I will lift on a seldom used string,  
Till I get it melodious, and then I will sing.  
A few staves floating round on sincerity's wing.  
While my darling old girl's in the bed.

I have heard of your record for many long years,  
And I've known you, old friend, about ten.  
You are noted for soothing unfortunate's fears;  
You are famed for encouraging good engineers;  
And, when trains are behind, you make gophers shed  
tears  
Till they get on their schedules again.

You are not quite so young as you were when I first  
Got a squint at your beautiful face;  
In the damp air of churches too long you were nursed,  
For the waters of Zion you had such a thirst.  
That your friends said you quaffed till they thought  
you would burst,  
Yet, from them all good luck you can trace.

On the highway of life, in the front of the fight,  
You have stood with your face to the foe;  
Waging warfare for everything noble and right,  
Never flinching an inch in the daytime or night,  
Till the goal of success proudly dawned on your sight,  
Gained without a dishonorable blow.

From the midst of your teens, when the battle begun,  
For full forty long years, till to-day,  
You have toiled on the road, and the honors you've  
won,  
Have been carved from the hardships you never yet  
shun,  
When you marched in the ranks and you carried a gun,  
Driving obstacles out of your way,

Like the Halsteads, you know how to win the regards  
Of the men you successfully lead;  
With your smiles of approval you lavish rewards;  
Never serfs more fidelity gave to their lords;  
Than they lovingly give, and such knowledge affords  
Me a subject to laud you, indeed.

For a satrap I've ne'er prostituted my brain  
To salute him in stanzas of song;  
For a good man, like you, my dear Bogart, I'll drain  
The last drop in the bucket to toast him amain.  
And if full and swell headed, I'll never complain,  
For I don't think such drinking is wrong.

—Shandy McGuire.

#### THE SWITCHMEN'S UNION

Phoenix-like the Switchmen's union is springing from the ashes of the Switchmen's Mutual Aid Association. No truer friends of the labor movement than the switchmen can be found. All should help the organization. Brotherhood firemen should assist in organizing new unions of the switchmen everywhere there is unorganized material. Let the good work go on.

#### VICE GRAND MASTER HANNAHAN.

The MAGAZINE is pleased to announce the nomination of Bro. John J. Hannahan, Vice Grand Master, as a candidate for congress from one of the Chicago districts. When friends of labor have the unusual honor of a congressional nomination bestowed upon them it is the duty of every laboring man to vote for friends of labor regardless of party lines.

The attention of all subordinate lodges is called to the special notices published in the Grand Lodge department of this issue of the MAGAZINE. Collectors and receivers, by paying particular attention to these instructions, will save themselves and the Grand Secretary and Treasurer much correspondence, as the notices are self-explanatory.

#### Wanted.

In order to fill out a complete set of the FIREMEN'S MAGAZINE, the Editor will pay liberally for the following back numbers:

- 1877—January to November, inclusive.
- 1878—January, February, May, June, July, August, September, October and November.
- 1879—January to December, inclusive.
- 1880—April, May, July, September, November and December.
- 1881—March, April and December.
- 1882—January, February, April and November.
- 1883—June and November.

#### Addresses Wanted.

O. D. HILLEGAS.—The relatives of Bro. O. D. Hillegas are anxious to hear anything concerning him. It is possible that he is no longer a member of the organization, but it will be an act of kindness for anyone knowing his whereabouts to correspond with Bro. J. E. Shafter, Secretary of Lodge No. 334, East Syracuse, N. Y.

THOS. B. CUBBINS.—Information wanted as to the whereabouts of Thos. B. Cubbins. Was last heard from in Yucatan; is a locomotive engineer and fireman; about six feet high, slightly stoop-shouldered; dark complexioned, with very black hair and moustache; aged 35 years. Any person having knowledge of his whereabouts or having seen him within the last three years will confer a favor by addressing his brother, J. F. Cubbins, North Second street, Memphis Tenn.

## FOURTH BIENNIAL CONVENTION

## Of the Brotherhood of Locomotive Firemen.

HELD IN THE CITY OF HARRISBURG, PA., COMMENCING SEPTEMBER 10TH, 1894.

The Fourth Biennial Convention of the Brotherhood of Locomotive Firemen is a thing of the past. The MAGAZINE stands upon the threshold of another epoch of the Brotherhood's history. What the future has in store for the firemen's organization is, indeed, promising, if the interest and patriotism exhibited by the delegates recently assembled at Harrisburg is indicative of progress and prosperity. Coming, as they did, fresh from the ranks in active service their strong determination to make the Brotherhood of Locomotive Firemen an organization the peer of any, is conclusive evidence that the members have lost none of their faith in the firemen's great order.

The legislative actions taken, the new laws enacted proved that no matter what the emergency may be the membership has the ability to cope with it, the mental sagacity to strengthen the weak points, to repair the broken parts, a characteristic of men reared in railway service.

On September 9th, the day preceding the opening of the convention, the streets and hotel corridors of the city of Harrisburg presented the old familiar scenes of hearty hand shakes and fraternal greetings so oft repeated in the past on similar occasions. The east bid the west welcome, Canada clasped hands with Mexico, all proclaiming in actions stronger than words that the Brotherhood was international in fact, as well as in name. Here could be seen groups of old time friends, friends of years, parted only to meet again at each recurring convention.

Had it been a national holiday one could not have expected a greater display of bunting. Buildings gaily decorated with national colors, streamers announcing a cordial welcome met the eye at every turn, and the hospitality of the capital of the "old Keystone State" was made evident upon first introduction. The committees of arrangement and reception did themselves great. Here and there and every where the members of these committees could be seen working like beavers and all with one object in view, to make everybody feel at home. This they did to the satisfaction of all, and the recollections of the city on the banks of the Susquehanna will ever be a bright spot upon the memories of those delegates who were so fortunate as to attend the Fourth Biennial Convention.

The Grand Master's gavel fell at 8:30 sharp on Monday morning, September 10th, in Chestnut Hall.

The first business of importance coming before the body was the

## GRAND MASTER'S REPORT.

Preliminary to a great mass of statistical and historical information pertaining to the business of the past two years Grand Master Sargent said:

SIRS AND BROTHERS:—Again we appear before the chosen representatives of the brotherhood to render an account of our stewardship. Bidding you farewell at Cincinnati two years ago, after the close of the Third Biennial Session, your chosen leader, I started out to fulfill the duties of my office, determined to return to you with your organization in a prosperous condition, if my life and health were spared. Little did we realize the trials and hardships that were before us. Our prosperity in the two preceding years may have made us too sanguine of success. Everything moved along successfully until July, 1893, one year from our parting at Cincinnati, and during that time our membership was constantly increasing and everything pointed to a season of great prosperity, when there came the panic, the like of which the country had never seen. In the twink of an eye we saw our industries paralyzed, banks fail, mines and factories close and business come to a standstill. Necessarily railroad corporations felt the effects of the depression and immediately the managers set about cutting down expenses. Members of the brotherhood were thrown out of employment, wages were reduced and our troubles began. Our increase in membership was light for the reason that the material comes from the youngest firemen in the service and they were the ones to be thrown out of employment first. Older members were also making but half time and it was a hard task for many to keep up their membership. Yet through all these trials we have endeavored to conduct the affairs of the Brotherhood in accordance with the policy laid down in its constitution and today we bring to you our report and ask at your hands a hearing. If you find that we have been neglectful of any duties, we shall expect your censure. If, however, you find that we have done our duty as we understood it and that if we made mistakes, they were of the head and not of the heart, then we trust that you will give us the credit of being honest.

I desire here to pay tribute to my faithful and earnest associates: Our Vice Grand Master, for his sincere kindness and unswerving fidelity to me during the last two years. In many instances when I have been pressed with duties I could not attend to, Bro. Hannahan has promptly responded and rendered me valuable assistance. During the two years sickness and affliction has been a constant visitor in his household and I have compelled him to remain at home, as I considered his duty to his wife and child was paramount to the work of the brotherhood. I have aided him in the discharge of his duties so far as I was able, but that was nothing compared to the service he was required to perform for me, and I do not wish to appear unappreciative. The brotherhood has a faithful servant in her Vice Grand Master. At the last convention the brotherhood was compelled to part with a brother who had for years been the pride of the organization and one to whom the brothers had pinned their faith, but he, believing that the brotherhood was not so progressive as it ought to be, was not in sympathy with its policy and bade farewell to the grand lodge. In the place of Bro. Eugene V. Debs the delegates placed our new Grand Secretary and Treasurer, Bro. Frank W. Arnold. He needs no introduction from me. Long before I came upon the scene of action, the name of Bro. Arnold was a household word in the home of every locomotive fireman, and while for a few years Bro. Arnold was out of active service in the grand lodge, he was always a faithful member of the order and interested in her welfare. When at the Third Biennial Convention, the delegates elected him to succeed Bro. Debs, I assured him of my hearty support and that it would be my purpose to encourage him and assist him in every way possible. For eight years I had associated with Bro. Debs, we had worked harmoniously together, and I accorded to Bro. Arnold the same fidelity that I had given his predecessor.

For nearly two years we have been associated together in your grand office. Never during that time have we been other than friends and I have never since I have been in the grand office been more assisted and encouraged in my duties and aided by the Grand Secretary and Treasurer than I have by Bro. Arnold. He has promptly responded when I have called and his past experience as our Grand Master fitted him for responsible and arduous duties, which he performed cheerfully and to the best interest of the brotherhood.

At the last convention I was given the authority to press into service the members of the executive board if occasion required. Several times since then I have called upon them and I have always found them ready to do their duty and do it well. They have all been kind to me and I here return my sincere thanks to them, one and all, for their faithful discharge of every trust and uniform courtesy to me. Our Board of Grand Trustees have been faithful servants of the order, and I am not unmindful of the encouraging words that I have received from Bros. Hynes, Muir and Sutton.

At the grand lodge of the brotherhood where I am supposed to have my office, I have always been kindly treated by the assistants of the Grand Secretary. There has been a close application to duty on the part of the employees and to them, one and all, I express appreciation of their labors and recognize their true worth to the order.

To the brotherhood at large, the members of our subordinate lodges, all with whom I have come in contact, I have but feelings of respect, and appreciate the fact that but for their loyalty the work of the past two years would have availed nothing. I owe to them more than I can express in words.

And now, brother delegates, I offer you my report. It is a truthful record of my past two years' labor as your Grand Master. It is all I have to stand upon and I await your action. I have seen fit to recommend certain changes in our laws that I believe will be beneficial, to point out wherein we can improve our facilities for doing our grand lodge duties. I hope you will consider them, and if in your wisdom you find anything that will advance the welfare of the brotherhood it is your duty to adopt them, but if in your judgment I have not made recommendations that will be beneficial, then it is incumbent upon you, as representatives of the subordinate lodges, to set them aside. Let us labor to advance the interests of the brotherhood above everything else and faithfully discharge our duties in this session of our grand body.

Since the last convention the Grand Master has been appealed to on twelve different occasions to settle differences arising between lodges and members. Of the decisions rendered by subordinate lodges, seven were affirmed, three reversed and two remanded for new trials.

A greater portion of the report was taken up with a detailed statement of the matters that required adjustment with railway officials, and the MAGAZINE recommends that each and every member acquaints himself with their details by referring to the printed proceedings furnished all subordinate lodges.

In regard to the

#### BENEFICIARY DEPARTMENT

the Grand Master said:

I doubt if it is possible to find a benevolent organization that has expended more money during the last two years than the brotherhood at so small a cost to the individual member. From August 1st, 1892, to August 1st, 1893, there were paid 259 beneficiary claims, 225 being death, 74 being total disability, amounting to \$448,500. From August 1st, 1893, to August 1st, 1894, there were paid 289 beneficiary claims, 199 being deaths and 90 being total disability, amounting to \$433,500.

The sum total for the two fiscal years is \$882,000. Twenty-two of the disabilities for the year 1892-1893

were for amputation. Twenty-nine of the disabilities for the year 1893-1894 were for amputation.

During the fiscal year, commencing August 1892, ending July 31st, 1893, nine assessments were levied by the grand lodge, costing each member for the year \$18.00.

During the fiscal year commencing August 1st, 1893, ending July 31st, 1894 eight assessments were levied by the grand lodge, costing each member \$16.00 for the year, a sum total for the two years of \$34.00.

If there is any other organization that presents a cheaper insurance feature than this, when the risks of the membership is considered and the liberality of the law in the allowance of claims, I have failed to learn of it. I am of the opinion that we are too liberal and that this convention should curtail to a certain degree the allowance of disability claims.

It may be of interest to you to know the sum total of moneys that have been paid out by the brotherhood through the beneficiary department during the years of its existence. This statement covers the time from 1880 to August 1st, 1894, and in round numbers amounts to \$3,181,732.50.

The report dwells at length upon the all important subject of federation and contains much that is edifying and instructive. Bro. Sargent has given the matter great study and his statements place him well in the lead of advanced federationists, of men whose sympathies for their fellow man has overcome all selfishness. His report quotes from a stenographic record of the position taken by him at the meeting of the chiefs of the several organizations held in Chicago last January as follows:

"I am at this time disposed to open the door for admission to the federated organizations to such national orders of railway employees as are at present organized on these different systems of roads. The experience of the past two months has convinced me that there is a disposition on the part of the railway train service to co-operate with and have the assistance of the members and men employed in different branches of the service. For example, the machinists, the carmen and the boilermakers. Now I go on this proposition: If I want the assistance of everybody when I am in trouble, I ought to be willing to show a little inclination to those individuals when I am not in trouble. Now, in every instance where we have had this wage question up for consideration there has been a desire on the part of all organizations to embrace all the employees in that company's service, and in many instances they have been represented by their committees and there has been a desire on the part of the federated bodies on those systems to take these men in. If there is a desire now to take them in at a time when it is absolutely necessary that every branch of the service be united in an issue like the question of wages, I say, Mr. Chairman and brothers, that we should open the way so it can be done when there is no immediate necessity for it on account of trouble. The time has come when we can give the privilege to employees on any system to federate, so long as they have a national organization. Now, there is nothing compulsory about this federation. We have simply provided a federation or a plan of federation which the men can accept if they want to. There is a desire on the part of the firemen on many systems, and the other gentlemen can speak for their own organizations, to federate with the boilermakers, with the machinists, and with the carmen, who have national organizations. I take the position that if the carmen on that system desire to federate, and the other organizations desire to federate, that we, as executive officers, should open the way so it could be brought about. If it is their disposition and wish to do it, let us give them the privilege.

I am in favor of it and will support an amendment to our present articles of federation which will permit of the admission of national organizations of railway employees on any system of railway when it

is the desire on the part of the different branches of the service to federate. I know the boilermakers have a national organization. Now take for instance, a system like the Union Pacific. Supposing there is a thorough organization of the carmen, boilermakers and machinists on that system, a national association. Why should we not allow them to become parties to the system of federation on the Union Pacific if the men want it.

I know there is a national organization representing the carmen, and there is a national organization representing the machinists. I believe the truck men also have a national organization. Now, here is a desire on the part of these men to federate. I, for one, want to give them that privilege.

We have our laws so framed that it is not possible for those organizations to bring us into any conflict, as they must first take up their grievances and endeavor to adjust them before calling together any federated board, and when that board is called, as a safeguard and a protection, the executive officers are called. I contend that we can very consistently and prudently admit or give the privilege to these men if it is their desire. There is a criticism passed upon the executives of these organizations claiming that they are holding themselves aloof, and that we do not want to affiliate with these day laborers, etc. That is one argument used by a great many of our members. I believe that if there is an organization of railroad employes on any railway system that we can just as consistently permit them to federate on that system as we can to accept their services when we happen to be in a hole and want somebody to lift us out. In every grievance we have had yet we have been willing as an organization to have the help of everybody and catered to their help. But when they got into trouble we simply said that our laws do not permit these things to be done. We have had an application sent into us for permission to federate from the carmen. We have to say, we cannot do it. I don't know why we should not provide a way so that if they desire they can have that privilege. We should not bar the door against their having that opportunity. I do not allude to any statements made by other people. I simply confine myself to my own desire. If it is wrong, this is the time and place to have it demonstrated. Those here to day are the ones to determine whether it is prudent. I suggested this to the committee and I believe that we can more consistently provide for the admission of the Carmen's Association and the National Association of Railway Machinists, we can more consistently provide for their admission than we can say to them, we should be glad to have you help us, and then when they have some trouble, to leave them simply to themselves.

The fact that the sentiments expressed in the above have been ratified by the subordinate lodges of the Brotherhood of Locomotive Firemen shows the rank and file keep pace with the progress of the times; that with all their conservatism the membership is ever willing to press forward to that ultimate outcome of the railway labor movement, unity of action of all sources. The report further said in connection with the subject of union meetings:

It is the intention to hold these meetings at stated intervals in different sections of the country, believing that they will be of great benefit to the order at large, and we hope that whenever a notice is issued of a meeting of this character that our subordinate lodges will interest themselves and be present in as large numbers as possible.

I have always encouraged our membership to affiliate with the different labor trades unions in their labor councils, urged them to sustain the union label movement, and it is very gratifying to me to find that in New England our organization is in close alliance with the different trades assemblies and that much good is being done through their united efforts.

I have been advised by representatives of the other labor organizations that they would be glad to join

with the members of the firemen's brotherhood in arranging meetings, and it would be a pleasure to me, during the remainder of my term, to attend meetings at any point, providing the duties of my office will permit, and if we are to add to our force, as I trust we will, we can have representatives of the grand lodge at all these meetings and it will create a new interest on the part of the membership, strengthen our organizations and help us in the work we have to perform.

I therefore recommend that it be the sense of this convention, when the delegates return home, that they shall join hands with the representatives of their organizations in their localities and arrange for a series of meetings at such times as will be convenient for them.

**Grand Master Sargent had many kind words for the**

#### LADIES' SOCIETY

**of the brotherhood. He said in connection therewith:**

It will be remembered that at the last biennial convention of our order, there assembled in the city of Cincinnati the representatives of the Ladies' Auxiliary of the B. of L. F., at that time represented by seven delegates, besides the official staff of seven, making fourteen in all. The Grand Treasurer's report at the time showed quite a large membership and a good balance in their treasury and everything prosperous with the auxiliary. We know from advice that we have received that the past two years have been a season of prosperity with the society, and that they come here to this convention with a most excellent standing. Under the able leadership of their Grand President, Mrs. Eugene A. Hall, and their secretary and Treasurer, Mrs. J. I. Moore, the ladies' society has become a fixed institution and a very valuable assistant to the B. of L. F.

I hope that this convention will extend to them every courtesy during their session in this city, and that our brother delegates will call upon the ladies of the auxiliary and encourage them in every way possible, and after you return to your subordinate lodges in those localities where an auxiliary has been instituted, aid it in every way that you can, and where they have not been able to organize previous to this time, interest yourselves in the work and help to institute lodges in your several localities. I have received a great many letters from our local lodges in the localities in which the auxiliaries have been instituted, in which they express their appreciation of the work of the ladies' society, and they are taking great interest in this movement, and we hope that the time is near at hand when the auxiliary will become as influential as the brotherhood itself.

The report shows that during the two fiscal years ending July 31st, 1894, Grand Master Sargent travelled in the interest of the order a distance of 113,265 miles.

Bro. Sargent recommended the addition of two Vice Grand Masters and says concerning these

#### ADDITIONAL GRAND OFFICERS.

This is a matter to which I have given a great deal of thought during the last year. For a long time I have realized that there was a necessity on the part of the grand lodge of a closer attention to subordinate lodges; that it is necessary that lodges of our brotherhood be visited at least once a year, that to allow a lodge to go without a visit from a representative of the grand lodge for an indefinite period causes the membership to lose interest and a falling off in attendance at meetings and finally the lodge begins to think that the grand lodge has no interest in them and they commence to criticise the administration of the affairs of the brotherhood.

During the past nine years the Vice Grand Master has labored hard to keep up with the work that properly belongs to his office. There have been a great many lodges to organize and it has kept him busily engaged. He has visited as many as possible, but with over five hundred subordinate lodges it is an

tirely out of the question for any one man or any two men to reach them each year and give them that attention that they are entitled to. Had we had additional force during the last year we could have saved our organization from a great deal of trouble that she now has to confront. Circulars are a very good medium through which to communicate in some instances, but there is nothing that gives the satisfaction to a subordinate lodge that a visit from one of the grand officers does. I know that from my own experience. It has always been my purpose, since I have been your chief executive, to visit as many local lodges as possible and I have been in quite a number, not nearly as many as I would like, for there is no work in the brotherhood so pleasant to me as visiting our local lodges and holding meetings with them. That territory has to be visited by representatives of the grand lodge, men who are alive to the interests of the order and who are willing to devote their time and attention to the B. of L. F. It is a work that cannot be done by deputies appointed for that special service. It must be done by men who have taken upon themselves the obligation of a grand officer and who are devoted to the interests of the order and who will work early and late to promote her welfare. The Vice Grand Master has done all that he possibly could do. I can say the same of my associate, Bro. Arnold, and myself. The records will speak in louder tones than I can of the work that has been done during the past two years. What we need at the present time is additional grand officers in the field to visit subordinate lodges, to encourage our membership, to visit railway officials, talk with them about the brotherhood and endeavor to overcome that ill feeling that has been created during the past ninety days by the hasty action of many of our members. There will be many new lodges to organize during the coming two years. Members are coming back who left the order and there will be a process of rebuilding going on throughout the country. In order to carry on this work successfully, in order to keep our membership alive and interested, grand officers have got to be in the field, they have got to labor with the men, encourage them and enlighten them and to do this we must have additional help. I have concluded that there is but one way to successfully carry on this work and that is to elect, besides our present Vice Grand Master, two additional Vice Grand Masters, who will work under the supervision of the grand lodge and whose duties shall be prescribed in the constitution.

The report recites the many pleasant relations with our kindred labor organizations and is indeed gratifying to those who have ever held to the belief that federation was a successful, permanent undertaking. Conditions as they exist are compared with the past and never in the history of organized labor has such changes been wrought in so short a space of time, changes beneficial to the cause of federation.

#### GRAND SECRETARY AND TREASURER'S REPORT.

SIRS AND BROTHERS:—In accordance with my duties as prescribed by the constitution of our organization, it now becomes my pleasure to submit for your consideration my first biennial report as your Grand Secretary and Treasurer, for the term beginning February 1st, 1893, and ending with the fiscal year, July 31st, 1894, covering the period of one year and six months.

I have sought to condense this report, not to save space so much as to simplify and make more convenient its perusal. I trust you will compare it with previous reports made by my predecessor with the sole object of determining whether or not the Brotherhood of Locomotive Firemen has or has not retrograded in all particulars, as well as to learn to your satisfaction whether or not I have done my full and bounden duty.

I beg to state that upon assuming the duties of Grand Secretary and Treasurer I found the condition and affairs of the brotherhood in an excellent and well systematized condition.

While the following report shows for the full term

of two years, yet that portion of it which begins August 1st, 1892, and closes January 31st, 1893, is the business of the office during the term of Bro. Eugene V. Debs, Past Grand Secretary and Treasurer, and is submitted in conjunction with my report for the reason that I took up the thread where he left it and continued under the same system.

I invite your attention to my report, which is as follows:

The following exhibits supply accurate figures relating to the receipts and disbursements of moneys in the various funds from August 1, 1892, to July 31, 1894, inclusive:

GENERAL FUND.	
Balance on hand August 1, 1892	\$11,563 94
Received during fiscal year ending July 31, 1893	76,216 61
Total	\$87,780 55
Disbursed during fiscal year ending July 31, 1893	78,624 25
Balance on hand August 1, 1893	\$9,156 30
Received during fiscal year ending July 31, 1894	72,682 51
Total	\$81,838 81
Disbursed during fiscal year ending July 31, 1894	65,006 31
Balance on hand August 1, 1894	\$16,832 50
PROTECTIVE FUND.	
Balance on hand August 1, 1892	\$2,411 95
Received during fiscal year ending July 31, 1893	15,000 00
Total	\$17,411 95
Disbursed during fiscal year ending July 31, 1893	12,746 20
Balance on hand August 1, 1893	\$4,665 75
Received during fiscal year ending July 31, 1894	115,871 00
Total	\$120,536 75
Disbursed during fiscal year ending July 31, 1894	107,557 89
Balance on hand August 1, 1894	\$12,978 86
BENEFICIARY FUND.	
Balance on hand August 1, 1892	\$37,607 75
Received during fiscal year ending July 31, 1893	481 878 00
Total	\$37,607 75
Disbursed during fiscal year ending July 31, 1893	476,750 00
Balance on hand August 1, 1893	\$42,735 75
Received during fiscal year ending July 31, 1894	440,200 00
Total	\$482,935 75
Disbursed during fiscal year ending July 31, 1894	435,467 90
Balance on hand August 1, 1894	\$47,467 85

After going into a detailed statement of receipts and disbursements of cash remitted to the grand lodge office during the two years ending July 31st, 1894, he said:

All things considered, the record of the Brotherhood of Locomotive Firemen since the last convention, in so far as its acts are concerned, has never been surpassed, not even by itself during the justly celebrated C., B. & Q. strike.

What with the unparalleled depression of business in all channels, such as the country is experiencing to-day and has experienced since more than one year ago; the closing of the doors of many banking houses, factories, mills, workshops, etc.; the thrusting of the affairs of numerous railroad corporations into the hands of the United States courts; the introduction of hundreds of thousands of cheap foreign pauper laborers, what had the honest free born American

laborer to look forward to, and yet in the face of all these facts is it not a matter for glorious congratulation that the Brotherhood of Locomotive Firemen during these times has paid the wages of the striking firemen on the Toledo, Ann Arbor & North Michigan Railroad for nine continuous months and to the striking firemen of the Lehigh Valley Railroad for four consecutive months, amounting to a sum of more than \$111,000. These are facts recorded in your grand lodge office and offer silent testimony to the generosity which railroad men are so justly credited with, as well as the solidity of the foundation of so glorious an institution as the Brotherhood of Locomotive Firemen.

On August 1st, 1892, there were 488 lodges, with a membership of 25,967. Reference to the above statement shows that on August 1st, 1894, we have 519 lodges with a membership of 26,508. This shows an increase of 31 lodges and 541 members over two years ago.

This increase in membership by no means shows the real gain the brotherhood made and was rapidly making, until the hard times and the distressing and deplorable action of railroad employes started all the uneasiness and unrest among certain disgruntled members of our organization. The distress consequent upon hard times has caused the most of our loss of membership, for our reports show that on November 1st, 1893, our membership was 28,778, the highest point it has ever yet reached. Thus had ordinary conditions existed since our last convention it is safe to assume that our membership now would have reached at least 30,000.

The withdrawals during the years of 1888-90 were the result of the C., B. & Q. strike, and were made from a membership that at no time exceeded 18,657, while the withdrawals of the fiscal year ending July 31, 1894, were made from a membership that at one time was more than 28,000, consequently there was a larger field to draw from and more reason to expect a larger total than ever before.

It is with pleasure that I am able to state that since the close of our reports for the year ending July 31, 1894, our records show that of the vast number of members that took final withdrawals since the beginning of the recent disastrous upheaval in railway labor circles, more than 300 have seen the error of their ways and have applied for dispensations with which to return to the ranks of this brotherhood, and they are still coming back as fast as they can, do so I believe that at least 30 per cent. of the final withdrawals as are shown in the above table of totals will have returned or tried to return to the organization they deserted while under the influence of bad advice, if indeed I may use no stronger term.

The Grand Secretary and Treasurer's report was replete with financial statistics and reflected great credit upon its author. He presented a complete and exhaustive report of deaths and disabilities, expulsions, withdrawals, new membership, rejected and allowed claims, litigated cases, printing and supplies, etc., and in conclusion said:

And now, I desire to dwell upon the general condition of the brotherhood as compared with its condition in years gone by. I remember full well, as do some of the old war horses I see here, when, during the years 1877-78-79 and '80, the times were turbulent and dire disaster overshadowed the brotherhood. It is not my purpose to tax your patience with a rehearsal of those scenes. Let it suffice for me to say that following the destructive panic and strike of 1877 came mismanagement of the affairs of this organization, in so far as the department of the treasury was concerned. Dissolution at last followed carelessness, if I may be permitted to employ that term in this connection, until in 1880 the fabric of this grand organization was nearly rent asunder, and drastic measures were essential toward checking, what appeared then to be, the complete disruption of the Brotherhood of Locomotive Firemen. Assuming

authority not given him by the grand lodge your Grand Master removed a recalcitrant official, and from that time up to the present I, with others, have taken much pleasure in watching the steady and healthy growth of this organization until it has reached a standing second to no class organization of this continent. Day by day, year by year, it has persistently forced aside all opposition, all obstructions, barring none, until it is now quoted as an organization well fitted to model after

Has it achieved this standing for naught? Has it done no good during all these years of adversity and prosperity? Must we close the record and say that all of this has been of no avail and we can do nothing more to advance the cause of labor?

I know it has been said that all stupendous causes must at some time dissolve to make way for the advance of improvement, but these dissolutions do not occur until the cause has reached a point where it cannot advance.

Is anyone here prepared to say that there is no further advance for the Brotherhood of Locomotive Firemen? It has been reported on the street and even printed in the press of the country, that the Brotherhood of Locomotive Firemen had performed its mission, that there was nothing, absolutely nothing, further for it to do, except to "quietly fold its tent, like the Arab, and silently steal away."

Now let us see if its duties are ended. Let me invite you to accompany me a short time on a review of the receipts and disbursements of the finances of this organization, going back only a few years and dealing in generalities. In this review let me first state that we are comparing the present, in all its grim desolation, all its disturbed and depressed conditions, conditions the like of which in so far as labor is concerned have never heretofore existed during the life of the oldest member of this organization, conditions that have appalled the stoutest heart, until no one is courageous enough to say when the end shall come, and if we shall find, comparing the faithful present with the flourishing past, that the final dissolution has set in, then it will be time to end our history, disband our organization and join the gruesome procession that is said to be forming for anarchy, war and destruction. But you will find that the time for all this has not yet arrived, and by the grace of God, stout hearts and willing hands it never will arrive.

Let us compare. In the year 1890, and I take that year because there is no dispute as to it being a prosperous one, and because it is two years from the time the great C., B. & Q. strike occurred, and after the Brotherhood of Locomotive Firemen had fully recovered from the severity of that affair, and we find the records in the Grand Secretary and Treasurer's office show first, a membership of 18,657, and a balance in the treasury of \$62,927. Let us pass to the next year, viz.: 1891, when the prosperity of the country was marvelous, and we had on August 1st of that year a membership of 22,460 and a balance in the treasury of \$2,781. Times still continue good, and when we strike a balance on August 1, 1892, we find a membership of 25,967 and a balance to the credit of the brotherhood in the treasury of \$51,583. It will be noted here that while our membership increased in gratifying proportions yet there was a falling off of funds of more than \$11,000. This was the time when it was supposed by some that the brotherhood had reached the pinnacle, that it could go no further, that its mission had been performed, that the time had arrived for final dissolution, and that from then on there was nothing further necessary than the services of the coroner and a first-class funeral cortege. But this obstinate brotherhood refused to die. It positively insisted that there was plenty of work for it to do in the future, and even better work than it had done in the past.

Let us see whether it is right or wrong. In the year ending August 1st, 1893, one year after its death had been announced, the membership had gone from 25,967 to 28,681, a clear increase of 2,714. Rather a healthy corpse, I should judge. Well, this prosperity was simply appalling to its enemies, so there was need of something more drastic to drag it down to annihilation, and the past three months contain sufficient history to satisfy the most exacting searcher after knowledge just what means have been employed to destroy the grand old institution, but late returns

give strong enough evidence for the belief that once more the Brotherhood of Locomotive Firemen positively refuses to die. It is not going to give up its ghost until long after its calumniators are through trying to throttle it. Let us continue comparisons. It has been said that comparisons are odious. So they are at times, but this doesn't happen to be one of the times. The year ending August 1st, 1894, shows a membership of 26,503, a decrease of 2,173 from the members on our records one year before. But how about our finances? As I have before stated, we had a balance to our credit August 1st, 1893, of \$56,557. We have a balance to-day, to our credit, of \$77,279, a difference in our favor at the end of the fiscal year, July 31st, 1894, of \$20,722.

Does that look like dissolution? Our loss of membership can be easily understood when we remember that ever since the first of July, 1893, fourteen months ago, and when this frightful depression first made itself manifest, and when banks and business houses all over this country were going to pieces, when supposed solid institutions were succumbing to the ravages of a condition of affairs that is unprecedented in the history of this country, when railroad corporations loaded with watered stock, were being forced to the wall; when merchants were unable to find purchasers for their goods, and with crowded shelves were not disposed to buy more, thereby cutting down largely the freight business of the railroads; when railroad companies were forced to cut off unnecessary trains, made unnecessary because there were no goods being shipped, and such being the facts it became imperative to cut down the working force. I say when these facts are considered it can be easily understood why our membership decreased. The men whose earning resources had been cut off were consequently unable to pay their dues, and our laws bore harshly with them, and in too many instances erased from our records the names of loyal, good members, whose only fault was their inability to keep up their payments from sheer lack of money. That is the main cause of our decrease in membership, and it is a source of great surprise to me that the decrease is so slight.

But how about our finances, the strength and support of all institutions that are in a sound, healthy condition—do they show for or against the brotherhood? Isn't it well enough established in your minds that with a balance to your credit in the year just ended larger by far than has ever before been exhibited during the entire history of the brotherhood, that there isn't the least fear on the part of a single member that the foundation of this organization remains intact, away beyond the strength of any one man or set of men to tear it down? These are facts, brothers, that cannot be controverted and will not down at any one's bidding. They are here for the inspection and examination of any doubter, and speak a thousand times more eloquent than is within the gift or man.

We will, for convenience, recapitulate:

1890.

Membership, 18,657; balance on hand August 1st, \$62,927.

1891.

Membership, 22,460; balance on hand August 1st, \$62,781.

1892.

Membership, 25,967; balance on hand August 1st, \$51,583.

1893.

Membership, 28,681; balance on hand August 1st, \$56,557.

1894.

Membership, 26,508; balance on hand August 1st, \$77,279.

We have to-day a better standing, financially, than we have ever had at the close of any fiscal year since the birth of this organization.

I say it without the fear of successful contradiction that right at this moment the Brotherhood of Locomotive Firemen is in a more prosperous and sound condition than it has ever before been during its entire history.

Then, again, and still better, when we reflect over

the fact that since one year ago last March this brotherhood has engaged in two strikes that drew largely upon its funds, more than \$111,000, and that even yet it has a larger surplus to its credit than ever before. Isn't that sufficient cause for rejoicing?

Let no one say it unless he can say it truthfully, that this organization is not in a firm and vigorous condition, for he would simply be inviting upon himself the condemnation of all fair-minded people. Let me quote the words of my illustrious predecessor at the second biennial convention, with a change only in the number of our members: "To-day nearly 27,000 brotherhood firemen are in line under our conquering banner, keeping step to the music of progress, advancement, growth in numbers, influence and power." So they are and so they are going to continue keeping step to the music of those same influences, by your assistance, combined with that of your grand lodge officers under conservative impulses, until a very large majority of all honorable protection-seeking firemen of this country shall be enrolled on its records.

Recent troubles among other labor organizations contributed to disturb the heretofore harmonious relations that have long prevailed throughout the entire brotherhood, but it was of short duration, and seemed to serve a good purpose after all for it brought about a better understanding among some of these members who labored under the erroneous impression that the Brotherhood of Locomotive Firemen had outlived its usefulness. Such members have awakened to a full realization of the true condition of affairs and are fast seeking reinstatement under the folds of a banner that they never have had a just cause to blush for. They will all in time be again registered on our lodge records. There were many good members misled and it is our clear and bounden duty to assist all such in regaining that which they foolishly and in an unguarded moment threw away. Let us be generous. We can afford to be. Extend the right hand of fellowship to all who err, for no man is so strong that he can at all times resist temptation, and it is not my province to decry a man because he makes a mistake. It is manly to make a mistake and then admit it, and it is equally as manly to pardon. Do not forget that "to err is human, to forgive is divine."

It is an extremely pleasant moment for me to pay a tribute to my associate grand officers. With each my relations have been of the pleasantest. At Grand Master Sargent's side continually, I have tried to be of assistance to him during trying times, and I gladly confess that he has been of immense assistance to me. His warm, generous nature and genial disposition have lighted many dark places for me, and to him I would wish to pay a tribute in language more eloquent than an fingersoll, if I were capable. I found him an indefatigable worker. Constantly bending every effort in the sole interest of the Brotherhood of Locomotive Firemen, and directly I had assumed charge of my office I knew the organization had in Grand Master Sargent a staunch, true, honorable defender, and at no moment since have I had the slightest reason to think differently. I owe him a debt of gratitude for his many kind acts and valuable assistance, which it is a delightful pleasure for me to record herein.

My relations with Vice Grand Master Hannahan have been equally pleasant and harmonious, and while not thrown so much with him as with our Grand Master, yet also at his hands have I received much assistance and valuable advice, which I here take great pleasure in acknowledging.

Of my associates in office I desire to make special mention for the untiring, unflinching loyalty they gave in the performance of their duties. I have never asked for assistance from one of them but that response was instantaneous, and to them is due a large share of the credit which I modestly claim for the most excellent condition of the grand lodge records and accounts. Their duties at times are arduous and perplexing, yet withal I am pleased to note that while the offices of the Grand Lodge of the Brotherhood of Locomotive Firemen are the acknowledged best kept and most systematic of those of any labor organization in this country, yet the excellent systematization is brought about by from one-half to one-third less clerks than any other labor institution em-

loys. To these faithful assistants I pour out a flood of thanks.

And now to the brotherhood at large I wish to acknowledge thanks for the courtesy, consideration and many kindnesses I have received from it. With a large daily correspondence with officers and members of more than five hundred lodges it would be surprising if more or less friction did not occur. Yet my surprise is none the less great at the exceeding small amount of misunderstanding that has followed my two years of active work in the office of Grand Secretary and Treasurer. It is with these facts before me that I dwell with pardonable pride upon the knowledge that the general harmony that exists throughout our entire brotherhood is but mirrored in the separate departments of the grand lodge.

#### VICE GRAND MASTER'S REPORT.

This report showed active work on the part of Bro. Hannahan. During the two fiscal years, ending July 31st, 1894, the number of new lodges organized are placed at 40; number of old lodges visited, 94; miles travelled, 34,459.

The Vice Grand Master closes by saying:

The brotherhood deserves and has my best wishes. If I ever wavered in the cause I have no knowledge of it. My associates will bear testimony, I hope, that in all seasons I have tried to elevate the order, improve conditions and better our circumstances.

That the brotherhood may continue to grow in numbers and importance is my earnest wish and fresh and beautiful garlands of thought, wisdom, beneficence and fraternity, redounding to our good and happiness, is the desire and hope of

Your obedient servant,

JNO. J. HANNAHAN,  
Vice Grand Master.

#### THE GRAND TRUSTEES' REPORT

is a complete review of the financial history of the brotherhood for the past fiscal year. The following is a summary of receipts and disbursements:

##### RECEIPTS.

##### GENERAL FUND.

Balance on hand August 1, 1893	\$9,156 30
Received during the year ending July 31, 1894	72,682 51
Total	\$81,838 81

##### PROTECTIVE FUND.

Balance on hand August 1, 1893	\$1,665 75
Received during the year ending July 31, 1894	115,871 00
Total	\$120,536 75

##### BENEFICIARY FUND.

Balance on hand August 1, 1893	\$12,735 75
Received during the year ending July 31, 1894	440,200 00
Total	\$482,935 75

##### DISBURSEMENTS.

##### GENERAL FUND.

For the year ending July 31, 1894	\$65,006 31
Balance on hand August 1, 1894	16,832 70
Total	\$81,838 81

##### PROTECTIVE FUND.

For the year ending July 31, 1894	\$107,557 89
Balance on hand August 1, 1894	12,978 86
Total	\$120,536 75

##### BENEFICIARY FUND.

For the year ending July 31, 1894	\$455,467 90
Balance on hand August 1, 1894	47,467 85
Total	\$482,935 75
Grand total receipts	\$685,311 31
Grand total disbursements for year ending July 31, 1894	608,032 10
Balance on hand August 1, 1894	\$77,279 21

In conclusion they published an interesting

##### BIT OF HISTORY.

In the following statement, which is taken from the archives of the grand lodge, will be found a *résumé* of the business transacted during the fourteen years ending July 31, 1894, and shows a gradual increase of business. The largest disbursements from the protective fund took place in the year 1888, but the year just closed leads all others in business of the beneficiary department.

#### RECAPITULATION.

##### RECEIPTS.

## GRAND MASTER SARGENT'S ADDRESS

AT PUBLIC RECEPTION, HARRISBURG, PA., SEPT. 10, 1894

LADIES AND GENTLEMEN:—The year 1894 will be recorded on the annals of time as the dark days of the nineteenth century within the circle of wage workers who comprise the bone and sinew of this great republic. Never in the history of this country have we seen conditions like those forced upon the American people, especially upon those who comprise the toilers of the land, and who, by the sweat of the brow, derive subsistence for their wives and children. Since July, 1893, we have been in the midst of one of the greatest industrial depressions America has experienced. Thousands of laborers have been thrown out of employment. Commercial industries have been paralyzed. The furnace, workshop, mine and factory have remained silent, and the tall, grim chimneys that have heretofore sent forth out of their huge mouths, smoke and vapor, stand as a silent monument to remind us of departed prosperity, while the busy hum of spindle and click of loom, music that is a welcome sound to American workmen and indications of a thrifty people, has ceased, and at the quiet of the fire-side, upon the village street and in public places, wage workers have gathered to ask themselves the question: when the earth produces abundantly, when our granaries are groaning under their heavy load of bread stuffs, when our mountains are filled with the choicest metals, when our treasure houses are over-stocked with wealth by millions, why, oh, why! must our children cry for bread and we hardy sons of toil be unable to answer their cry for the want of employment for our hands?

There is a cause for everything, a creation of the conditions of the hour, and as wage

workers have had and are still having bitter experiences, it behooves them to seriously contemplate trials and privations through which they have passed and the ones which confront them now; and by unity of action and a firm determination, endeavor to remove the causes of this terrible depression and again make our country—one of the brightest and richest of God's creation—to be the land of profitable industries and to bring sunshine into the homes of our families and a smile of contentment to rest upon him who earns his daily bread.

Is it a wonder that during the past eight months there has been an uprising among the working people? That through the length and breadth of this nation there has been constant unrest? That men have formed themselves into little bands and setting their faces toward the seat of government, have tramped through sleet and snow, suffering all the hardships possible for men to endure? No matter what may be said of such a movement, it is evidence of a condition of things that does not speak well for this free and enlightened nation, and the time is at hand when every true and loyal American, every law-abiding citizen, every ruler and statesman, should join hands and minds to free our country from such an accursed industrial condition as she is now plunged into; to open up our avenues of trade; to kindle the fires in our shops, set in motion spindle and loom and let our people have employment and let it be said that in America honest men and women need not suffer the pangs of hunger because of the want of work.

For many years the workingmen of our nation have been struggling to better their conditions, realizing that man alone can avail but little in any great movement of reform, but by associating himself with his fellow men, thereby enabling him to obtain

new ideas and an exchange of opinion, he is in a position to do much! Workingmen have formed societies, organized their trades, unified themselves and by this means have in many ways greatly benefited each other. To-day we find that nearly every trade has its organization. These organizations have been of great benefit to society. Take the foundation of all the trades unions; they are laid upon good principles; the teachings are wholesome and will improve the mind, if properly applied, and no one can deny that the better a man becomes, the more enlightened he is in mind, the better citizen he will be. And one of the principal reasons why in America you find such an intelligent class of wage workers is largely because of the influence and teachings of the trades unions, and to-day when we hear of the disturbances in the industrial centres and some people are prone to condemn the labor organizations and try to place the responsibility upon them for all this agitation, if you will make an investigation you will discover that there is not a legitimate trade union to-day but what is counseling moderation and appealing to their membership to be law-abiding, to discountenance riots, to use the ballot and not the torch, to support Old Glory, the emblem of freedom, not flaunt the red flag of anarchy and by their intelligence and their united strength at the polls place in power in state and nation, as rulers and counsellors, men of the people and for the people, who will not rest day or night until the sun of prosperity shines upon us and we become a happy and contented people, with every avenue open for the application of our mind and muscle.

It is in a time like this that good counsel is needed by the membership of trades unions; men of conservative thought and prudent action. When workingmen are idle, time hangs heavy upon their hands, and with men of certain temperament it is easy to excite them, and to preach radical and anarchistic doctrine among workingmen in a time like the present is criminal. What is needed to-day among wage workers is men who will turn their attention to the legislation that is necessary to improve their condition; to advocate the closing of our gates against the inroads of foreign immigration that at present is a curse to us; to preach arbitration in wage disputes and keep in the background, to be brought out as a last resort and then only when every other effort has failed, the weapon of organized labor—the strike.

Strikes have been an advantage to organized labor. While the evil results are sometimes most prominent, they have been a powerful educator of the masses, and while defeat has often been recorded, yet what seemed defeat has afterward proved a victory for labor. I believe that there was never a time in the history of strikes but what there was a benefit derived and while

the contestants suffered and for many years the sting remained, yet out of the contest valuable lessons were learned and it was not a defeat of labor. But there should be judgment used by those who have the power to inaugurate strikes, and good counsel should always be given the wage workers by their leaders. A man who will encourage men to strike in a time when thousands of his craft are out of employment, when the business of the country is paralyzed, when men are begging for bread, and a strike means certain defeat for the parties who participate, displays poor judgment and is unfit to be a counsellor and leader of a labor organization. There is an opportune time for strikes, if strikes there must be. It is when business is good, when the market is drained of surplus labor, when the majority of the craft involved have been earning fair wages and have something to contribute to their unfortunate fellow workmen; but those conditions do not prevail to-day and have not in the past year. That is why I contend that in a time like the present wage workers want the wisest counsellors and men who are not ambitious to have their names emblazoned upon the scroll of fame as leading the greatest strike the world ever saw; but who desire to keep workingmen who can earn their living employed, so that they may contribute a mite to help him who has nothing. They should bend their energy and talents in convincing the hungry toilers of the causes of the great depression and point out a remedy, which certainly is not found by further plunging the avenues of trade into chaos by strikes, applying the blazing torch or in defiance of the laws.

Intelligent wage workers will agree with me when I repeat that to-day we need radical changes in our national laws, a better protection for our labor, a curtailing of immigration, until the thousands of idle toilers now in our land have found employment at good wages, and no sane person will contend that strikes in a time when thousands are living upon charity will hasten that hour. But if the idle workman will pause to consider that these conditions are brought upon us by unjust legislation, the combinations of trusts and the manipulations of the stock jobbers and Wall street rulers and more in the interest of foreign powers than of our own country and thus they will continue until regulated by national laws and that to obtain these laws requires in the halls of congress and the state legislatures men who are in sympathy with the common people, who have been with them in their hour of adversity and will not forget them when they have been elevated to a position of authority by their associates and become the servants of the same combinations that have created this horrible depression. If the leaders of labor will put away all selfishness and put off the cloak of hypocrisy, that is worn by so many, and let their minds be

centered upon the needy people, and not upon an office they hope to reach, we firmly believe that it is within the power of the wage workers, through the influence of trades unions, to bring about prosperous conditions and make plenty of employment at good wages. But if men are influenced to strike and idleness is thrust upon those few who are now employed and thereby disintegration is caused among the trades unions and more misery to the families of workingmen, we will be retrograding and our conditions will be worse instead of better. Here in this beautiful city of the great commonwealth of Pennsylvania are representatives of the Brotherhood of Locomotive Firemen, a trades union founded upon principles as good and elevating as any society under the canopy of heaven, with a membership of 27,000 sturdy sons, who have faced dangers seen and unseen in the faithful discharge of their duties upon the great commercial highways of the country.

This is the biennial meeting, and these representatives chosen from among the toilers have entered the gates of this city for the purpose of legislating for the brotherhood, their best friend and their sure protector, and it may not be amiss if we dwell upon the aims of the brotherhood, review the past history briefly and set forth its mission and point out its mode of procedure as a trades union.

Years ago, firemen—few in number—met together in a switch shanty in Port Jervis, N. Y., and discussed the question of organization. Imbued with the progressive spirit characteristic of locomotive firemen, they began their labors, and though but a handful, under the wise counsel of that old patriot and faithful brother, Joshua Leach, the numbers increased. New lodge fires were kindled and the influence of organization, impregnated with charity and true hospitality, brought forth the best element in man's nature, and we see a prosperous growth and year by year the ranks extending until from the corporal's guard we have the vast army that to-day is represented by these brothers out of a membership scattered throughout the length and breadth of the land.

It may be said that when the brotherhood was first organized it was only a benevolent society, commonly known as an insurance order. So it was, for the reason that the locomotive firemen in those days looked out for their families and provided for a protector to wife and child when husband and father should meet the fate that awaits many of the craft. The brotherhood did not come up like a mushroom in the night. Good material was sought for, as the builders knew that to make the institution permanent required care and the growth must necessarily be slow. It was not intended by the founders of the order to overturn the entire universe in one year, and to wipe

off the earth all kindred organizations that they might have supreme control. What the firemen strove to do was to organize their craft into a substantial brotherhood, educate their members and advance them to a higher standing in society, and by a faithful observance of their laws build up a brotherhood the peer of any in the land and one that would command respect wherever an altar was erected and the faithful members assembled together. It must not be understood that the brotherhood has always had a clear track and that the sun of prosperity has always shone upon her. There are many here who will remember the dark hours of 1877 when the stoutest heart grew faint, and when it seemed that the work so faithfully performed by our illustrious Past Grand Master would come to naught. But when destruction seemed inevitable, there came forth men, who, like the knights of old, bared their arm and went forth to battle and rested neither day nor night until the brotherhood was safely anchored and the storm had passed. Then with a devotion worthy of saints they set out to preach the gospel of charity, pointing out the benefits of sobriety, inculcating that most sublime virtue, industry, and locomotive firemen flocked to the standard and the brotherhood triumphed and became a power for good.

After the organization had grown to a membership of 15,000 and the people had become acquainted with the aims and purposes of the brotherhood, when railway managers were convinced that a fireman in their employ who had a membership in the organization insured them of having a faithful servant, a sober and reliable man, the brotherhood, at its twelfth annual convention in Philadelphia, right on the threshold of the city of Harrisburg, adopted a protective trades union policy and set out to look after the wages of its membership, to endeavor to bring about closer relations between employee and employer, and to provide rules and rates governing the calling of the members. Laws were enacted providing for committees to act in behalf of the firemen before the officials of the railways, and the brotherhood declared itself a protector of its labor. It did not enter the fold of labor with a grievance against any one. It had no chip upon its shoulder that it wanted knocked off. It did not claim that every other organization representing workingmen was a failure, and that the brotherhood offered the only sure protection for wage workers. It did not send out its grand officers and agitators to tell the members of kindred organizations that their officials were bribe takers, had been bought by the railway corporations, in fact, were anything but what they represented. No; the Brotherhood of Locomotive Firemen had been organized for an honest purpose. It was instituted to benefit locomotive firemen and

not to create a sinecure for any one man. The members of the order realized that to be successful they must be honest with their employers; to ask those conditions for the firemen that were fair in fixing rates of wages, to be governed largely by conditions and surroundings. In trying to protect its membership, that these same members must be faithful in the discharge of their duty to their employer, sober and reliable, and the organization should not be used to shield a man who was guilty of unbecoming conduct, willful violation of rules and incompetent to perform those responsible duties of a locomotive engineman.

The brotherhood realized that among the employers of its membership there were a few narrow-minded, unprincipled men who had unfortunately been elevated to positions of authority in railway circles, and that when in contact with such men, it would require something more effective as a persuader than the limber tongue of the chairman of the committee or the influence of the walking delegate, the Grand Master, so it introduced a striking plant of the most improved pattern, but with rules that would prevent it being set in motion except as a last resort and when every other means had failed, whereby simple justice could be obtained for its membership. This plant was required, for without it the protective machinery of the order would have been of little avail. It was known that the organization had this powerful instrument, although it was not always brought into service, only referred to when speaking of the protective equipment of the brotherhood.

From 1885 up to the present day the brotherhood has been in the field of labor striving to promote the conditions of locomotive firemen. It has endeavored, by fair dealing, to gain the confidence of the railway corporations by whom its members are employed, and the respect of the public. It has always cultivated friendly relations with trades unions organized for a noble purpose, and has stood ready to aid the distressed wherever they might be found. How well the brotherhood has fulfilled its mission is proved by the standing of the organization to-day; the character of the men that make up its ranks; the relations that prevail between the employer and the employee. Since the brotherhood adopted a protective policy there have been over two hundred written schedules and agreements made between the railway managers and the committees representing the firemen, while numbers of men who have been discharged have been returned to service through the influence of the order. During this time the brotherhood has been compelled to start up its striking machinery in a few instances on account of running up against narrow-minded men, who would not listen to reason, who would not arbitrate,

who would do nothing but have their own way. Some of them had it; but it cost them several dollars and they had lots of experience which they will not require hereafter. In some instances the brotherhood was successful; in others it failed, in a measure, to gain the end sought, but in no single instance was everything a loss. Lessons were learned that were of practical benefit to both parties engaged. In all these struggles the brotherhood confined its contest to the territory of the enemy, as the laws do not permit of the waging of a general warfare against friend and foe alike. The order recognizes that it has friends among railway managers, who are treating its members with fairness; that with these same railway managers they have written agreements, and to violate them on the part of the men, and injure the business of their employer who has kept his word and his agreement, would be an outrage and would place the organization in a position to be condemned by any fair minded person. She therefore says to her membership on other lines: "We will fight this battle on the enemy's own ground. You do your duty by your employer, earn your wages, respect your agreement, obey the laws of your organization, and when we call upon you for financial support you will have something to contribute, and if we suffer defeat you, whose employer has treated you with respect, will have employment and can help those of the members who have fought the battle." This policy may not meet the idea of the reformists of to-day, but it is the only policy that will maintain your organization and insure situations to our membership.

When the Brotherhood of Locomotive Firemen was engaged in warfare with General Lehigh Valley, what justice would there have been in your Grand Master and his associates waging war on the Pennsylvania Railroad, the D., L. & W. R. R., where our tried and true friend Hallstead reigns supreme? Or the Central of New Jersey? Or the Erie? Stop every wheel in the country is the cry. Carry out that policy and you stop the resources of your organization: destroy the relations that are pleasant upon many lines like the D., L. & W., and Pennsylvania Railroad; lose agreements that have cost many hours of hard labor on the part of your committees, and in the end, as sure as there is a sky above us, you have demoralized your organization, driven thousands out of employment, made enemies where you had friends, and, worst of all, paupers of the men themselves; and in room of being able to contribute support to the unfortunate brothers who were aggrieved, whose employer was tyrannical and denied them justice, and who left his service expecting, if he succeeded in filling their places, that the brotherhood would contribute something to their support, you force them to appeal to the charitable per-

ple of their town, to the governor of their state, to keep their wives and children from starving, while those who left the service of an employer against whom they had no grievance are compelled to leave home and friends and tramp the country over to find their name on the black list, and then the fallacy of their acts becomes apparent to them. But if the present policy of the brotherhood is carried on and federation with trades unions representing railway labor is encouraged, and grand officers who represent these organizations will labor as zealously to advance the organizations they represent as some of them do to destroy those against whom they have a grievance, it will cause wage workers to seek an affiliation with the union that represents their trade, and with a thorough organization and harmonious relations much good will be accomplished for those who toil. The brotherhood is an advocate of federation. She has always been prominently connected with the other railway organizations that have a fixed policy and adhere to it. She has always maintained pleasant relations with trades unions outside of the railway service, and she fully recognizes the benefit of these relations; but in affiliating with the American Federation of Labor, the Carpenters, the Hatters, the Cigarmakers, she does not expect that if she has a misunderstanding with Mr. Roberts, of the Pennsylvania Railroad, that every member of the American Federation of Labor, that every carpenter, every hatter and every cigarmaker will cease his labor and parade the streets, and hold mass meetings to pass resolutions of sympathy, but to go on with their labor, respect their laws and their agreement with their employers, and the sympathy that the brotherhood will expect of them is that which will put some substance in the stomachs of her idle members and their families, a sympathy that does not come out of a resolution passed at a mass meeting, but out of the earnings of wage workers, which cannot be expected if every man is on a sympathetic strike.

The brotherhood has a fixed law. Every member has upon bended knee sworn to faithfully observe its laws. The chief executive is under double obligation to enforce these laws. If he is working in the interests of the brotherhood he will always remain a firm advocate and defender of them. If, in his opinion, they are wrong, he will await the time of the meeting of the law-making body and recommend such changes as may be necessary, but he has no business to willfully ignore the law to gain the applause of law breakers, and no man who is connected with a labor organization, and who is honest in his motives, will condemn any officer or member of the Brotherhood of Locomotive Firemen who has respected his obligation and the laws of his union. It is only such as have a personal end to

gain and would sacrifice everything that they might succeed, who will vilify or misrepresent their brethren.

We come here as the representatives of the brotherhood to review the work of the past two years. We will find much of interest in the reports of the delegates and the grand officers, but the fact that the brotherhood has remained loyal to its pledges and faithfully labored to advance the interests of the membership in the face of the most discouraging times in the life of the craft, and comes here in a better financial condition than ever in her history, ought to awaken in the heart of every delegate here a love for the grand old order that will insure a successful meeting and that the predictions of her enemies, who said that she had outlived her usefulness and that at the fourth biennial convention there would not be a corporal's guard, will be shown to be but the utterance of a dissatisfied element which could not rule and sought to ruin.

I have no foreboding of evil befalling the organization. There are in the delegation here to-night men of firm convictions as to right. They have been in the labor movement for years and they are fully competent to judge as to the success or failure of the brotherhood. We offer the prediction that the future of the order will be even brighter than its past; that her membership will increase; a greater influence will be manifested and many who have lost faith in the brotherhood will return, as did the prodigal of old.

We have here to-night representatives of other trades and callings, who are old in years as representatives of trade unions. The brotherhood welcomes them as her guests, and assures them of her appreciation of their presence. The organization can lend a helping hand to all. It is not necessary to inaugurate strikes to aid union labor, nor to hold these mass meetings—although much good comes from these meetings—but if you will buy union made hats, smoke union label cigars, wear union made overalls, employ in building your homes the union carpenter, in fact, eat, live and sleep a thorough union man, you will all be performing your duty. Labor to increase your membership, get a thorough organization, be law abiding citizens, and with such changes as can be brought about in our national laws by the united efforts of trades unions, we will see a prosperous, contented people; the wage worker earning good wages, his family well clothed and well fed, and the stars and stripes, that emblem that represents freedom, the only banner borne at the head of the great army of labor and the red flag of anarchy and its following driven out of our country.

Your honor, on behalf of the Brotherhood of Locomotive Firemen, represented here by these gentlemen, delegates of the

fourth biennial convention, I desire to thank you for the kind address of welcome extended to us here to-night. It needed no words of yours to make known that we were welcome, for ever since our arrival we have had substantial evidence of the generous hospitality of the people of your city. You, my dear sir, have reason to be proud of your people, and we are glad that for a time we may remain among them. It will be the ambition of every delegate to enjoy the beauties and share in the blessings that are so generously tendered, and we hope that when we are compelled to depart from your midst that you will feel that our visit among you has not in any way marred the pleasantness of the week, and that you may wish for our return.

To his excellency, the governor, we extend our sincerest thanks also. A governor of the great commonwealth of Pennsylvania, who has won the admiration of his people by his faithful devotion to the interests of his state, we feel, sir, that to receive a welcome from you insures the success of our convention, and in our deliberations here it will be our purpose to enact such laws and map out such a policy as will secure an increase in numbers and influence and we believe from your utterances here that you will look with favor upon our organization as long as it is conducted upon honest principles and its membership respect law and order.

To our guests, the chief executives and representatives of sister organizations, we bid you welcome, and you can rest assured that in the Brotherhood of Locomotive Firemen you have an ally that will always be found ready to extend the hand of assistance in a substantial way, and while we may not leave our situations to show our sympathy, when it cannot be done without violating our oath, we will contribute of our substance abundantly and aid your unions in all laudable undertakings. May success attend you in your labors to elevate the condition of your several crafts.

We would fail in doing our duty did we not pay our respects to our lady friends who are with us here to-night. Their presence inspires our delegates to work faithfully to advance the brotherhood, and to sit in the sunshine of their beautiful faces is as refreshing as the morning air of the Alleghenies.

To our brothers of the different organizations located here in Harrisburg, who have so generously aided in making this reception such a success we bow in hearty appreciation, and place upon the committee of arrangements the crown of merit for arduous duties faithfully performed. And with our hearts in full accord with the spirit of peace and brotherly affection, we say, "All hail to the Brotherhood of Locomotive Firemen."

## GRAND LODGE.

### Important.

CHANGE IN DATE OF QUARTER.

OFFICE OF THE GRAND LODGE, B. OF L. F. 7  
TERRE HAUTE, IND., October 10, 1894. )

*To Members of Subordinate Lodges:*

SIRS AND BROTHERS:—The Fourth Biennial Convention, held at Harrisburg, September 10, enacted a law which changes the date of the quarters, as well as the date of the fiscal year of the Brotherhood of Locomotive Firemen.

Heretofore the quarters have been as follows: Beginning February 1 and ending April 30; beginning May 1 and ending July 31; beginning August 1 and ending October 31; beginning November 1 and ending January 31; and the fiscal year began August 1 and ended July 31.

Under the new law, which goes into effect January 1, 1895, the quarters will be as follows: Beginning January 1 and ending March 31; beginning April 1 and ending June 30; beginning July 1 and ending September 30; beginning October 1 and ending December 31. The fiscal year will begin July 1 and end June 30.

All members are urged to take particular notice of the above changes.

Yours fraternally,

F. P. SARGENT, G. M.  
F. W. ARNOLD, G. S. and T.

### Notice to Collectors.

OFFICE OF THE GRAND LODGE, B. OF L. F. 7  
TERRE HAUTE, IND., October 10, 1894. )

*To Collectors of Subordinate Lodges:*

SIRS AND BROTHERS:—The Fourth Biennial Convention, held at Harrisburg, September 10, enacted a law making one kind of receipt, which Collectors give to members when they pay their quarterly dues, grand dues, special assessments and monthly lodge dues, and which shall be the only legal receipt. This receipt will have printed upon the back an order for the secret work, which same will do away with the orders for secret work formerly and now in use. The Grand Lodge will be ready to supply these receipts on December 1.

Yours fraternally,

F. P. SARGENT, G. M.  
F. W. ARNOLD, G. S. and T.

**Special Notice to Collectors.**

OFFICE OF THE GRAND LODGE, B. OF L. F.,  
TERRE HAUTE, IND., October 10, 1894.

*To Collectors of Subordinate Lodges:*

SIRS AND BROTHERS:—Beginning January 1, 1895, the law changing the fiscal year and the quarters thereof will go into effect. You are hereby notified that you will collect from the members their quarterly dues for the quarter ending January 31, 1895, the same as has been done heretofore. This will pay the quarterly dues of the members up to and including January 31, 1895. Then, beginning January 1, 1895, you will begin collecting dues from the members for the two months beginning February 1 and ending March 31, 1895. This will bring the quarter within the requirements of the new law.

Thereafter you will make your collections for the quarters beginning April 1, July 1 and October 1. The grand dues will be collected one month earlier than heretofore, as the fiscal year will hereafter begin July 1, instead of August 1, as in the past.

Yours fraternally,

F. P. SARGENT, G. M.

F. W. ARNOLD, G. S. and T.

**Assessment Notice for November.**

OFFICE OF THE GRAND LODGE, B. OF L. F.,

### Beware of Ointment for Catarrh that Contains Mercury.

as mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is ten fold to the good you can possibly derive from them. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, Ohio, contains no mercury, and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally, and made in Toledo, Ohio, by F. J. Cheney & Co. Testimonials free.

Sold by Druggists, price 75c per bottle.

## Don't forget that the Brotherhood Overalls

are NOT MADE by Chinamen,  
are NOT MADE in "Sweat Shops,"  
but ARE MADE by the  
**BEST PAID WHITE LABOR**  
In the business.

They are made by a Brotherhood man, and were officially endorsed by the B. of L. F. Convention at Cincinnati, September, 1892. If no dealer keeps them in your town, insist upon getting them. The dealers anywhere will handle them if the Brothers will insist. Won't YOU insist on the Brotherhood Overalls, made by

H. S. PETERS,  
{ Lodge No. 3 B. of L. F. }  
{ Div. 419, B. of L. F. } Lock Box 68. Dover, N. J.

## FREE TO SUFFERERS.

Why waste time, money and health with "doctors," "wonderful," "cure-alls," specifics, etc., when **when I will send FREE** the prescription of a new and positive remedy for a **prompt lasting cure**. Lack of strength, vigor and manhood quickly restored in young or old man. I send this prescription **FREE of charge**, and there is no humbug or advertising catch about it. Any good druggist or physician can put it up for you, as every thing is plain and simple. I can not afford to advertise and give away this splendid remedy unless you do me the favor of buying a small quantity from me direct or advise your friends to do so. But you may do as you please about this. You will never regret having written me, as this remedy cured me after everything else had failed.

Correspondence strictly confidential, and all letters sent in plain sealed envelope. Enclose stamp if convenient. Address

E. H. HUNGERFORD, Box A 314, Albion, Mich.

## FREE!

Our large 21-page catalogue of Organs, also our new and elegant catalogue of Pianos, containing 16 pp. We have the largest manufactory in the world, from which we sell direct to the consumer at wholesale prices, thus saving the profits of the dealer and the commissions of the agents. We furnish a first-class Organ, warranted 20 years, with stool and book, for only **\$27<sup>50</sup>**

No money required until instrument has been thoroughly tested in your own house. Sold on instalments. Easy payment.

We positively guarantee every Organ and Piano twenty years. Send for catalogue at once if you want to obtain the greatest bargain ever offered on earth. Write your name and address plainly, and we will send by mail same day letter is received.

As an advertisement, we will sell the first Piano of our make in a place for only

**\$175<sup>00</sup>** Stool, Book and Cover Free. Regular price, \$330.00.

**Beethoven Piano and Organ Co.,**  
P. O. Box 575, Washington, N. J.

**WATCH AND BOX OF 50 CIGARS C.O.D. \$3<sup>98</sup>**

### OUR LATEST AND GREATEST OFFER!

A 14 Karat Gold Plated Hunting Case Watch and Box of 50 of Our Finest Perfecto Cigars for only \$3.98. O. D. You examine them at the express office, and if satisfactory pay the express agent \$3.98 and they are yours. Mention in your letter whether you want ladies or gents size watch and order to-day, as this offer is for a limited time only. Address,

**THE NATIONAL MFG. & IMPORTING CO.,**  
334 DEARBORN STREET, CHICAGO, ILL.

# Marks' Patent Artificial Limbs

## WITH RUBBER HANDS and FEET

ARE NATURAL IN ACTION, NOISELESS IN MOTION AND THE MOST DURABLE IN CONSTRUCTION.

Over 15,000 in use, scattered in all parts of the world. Eminent surgeons and competent judges commend the Rubber Foot and Hand for their many advantages. At every industrial exhibition where exhibited they have received the highest awards. They are endorsed and purchased by the U. S. and foreign governments. A treatise, containing 430 pages, with 300 illustrations, sent FREE; also a formula for taking measurements, by which limbs can be made and sent to all parts of the world with fit guaranteed.

To A. A. MARKS:

DEAR SIR: I was a professional tight rope walker and aeronaut before I lost my leg, and I do not allow the loss of a leg to compel me to seek another occupation. With your patent artificial leg I can walk a tight rope nearly as well as I ever could. The rubber foot enables me to balance with safety. The absence of an ankle joint removes the risk of falling to a large degree.

While walking on the ground I never feel the necessity of looking for uneven or bad places. I feel safe and sure on my rubber foot, no matter where I place it. I consider your invention of the rubber foot the most valuable and important to persons who have lost their natural limbs than any invention that has been made.

If any person doubts my ability to walk on a tight rope with an artificial leg applied, I will wager \$100.00 with them that I can perform for 30 minutes on a one and one-half inch rope elevated fifty feet above the ground.

Respy yours, PROF. F. E. JACOBY,  
157 Bank St., Waterbury, Conn.

RECEIVED THE HIGHEST AWARD AT  
WORLD'S COLUMBIAN EXPOSITION.

1 Fenchurch Ave., London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the out-puts have increased over 1,200 per cent. beyond all precedent, amounting during 1892 to 3,000,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

## Galena Oil Works, Limited. FRANKLIN, PA.

### SAFETY, SPEED, ECONOMY

Are the results of the use of Galena Oils. Scientific and practical tests of the past twenty years have demonstrated the fact that Galena Oils are superior to any other oils in the market.

Galena Oils in winter stand a cold test of from ten to fifteen degrees below zero, and will not freeze in the coldest weather.

The superiority of Galena Oil is demonstrated by their exclusive use upon a large majority of the railways of this country. They are in use upon three continuous lines of railways from Boston and New York to the Pacific coast and on one to the City of Mexico, thus demonstrating their adaptability to all climates and all temperatures.

We also supply our patrons with Sibley's Perfection Valve Oil, which is in exclusive use upon a large majority of the leading railroads of the country.

When addressing our advertisers mention this Magazine.

WILLIAM SELLERS & CO., Incorp., Philadelphia, Pa.

Sole Patentees and Makers of

# Self-Acting Injector of 1887.

**NOTE**—There are many injectors which will work well when the conditions are favorable. This injector is designed to work well under all conditions and is, therefore the most reliable.

**IT WILL RE-START ITSELF.**

**IT WILL ADJUST ITSELF.**

**IT WILL LIFT HOT OR COLD WATER.**

Its range of capacity is over 60 per cent. and it can be regulated, therefore, to work continuously for light or heavy trains. It is operated by a simple lever motion which readily starts and stops its action.

Reliable Watch at a Low Price.**

**GENUINE  
DUEBER  
SILVERINE  
CASE.**

**SEVEN  
JEWEL  
NEW YORK  
STANDARD  
MOVEMENT**

We have purchased several thousand of these watches for cash at "way-down" figures, and are giving them away at **\$2.35** each. Please notice that this is not one of the many "clock watches" made by the clock companies. The watch consists of a **Genuine Dueber Silverine Case** weighing full three ounces (not a light weight nickel case), made in full bascine style by the Dueber Co. of Canton, Ohio. It is warranted not to tarnish, and will wear longer and better than solid coin silver. The case is standard 18 size, open face, hinge back and bezel (not snap), water and dust proof joints, heavy beveled crystal, and is beautifully finished. Fitted in the case is a **New York Standard Movement**, nickel, seven jewels, stem wind, lever set, safety pinion, compensation balance, superior white enameled dial, fully warranted and guaranteed to be a reliable timekeeper. It is elegantly damaskeened, presents a handsome appearance and is without doubt the best watch ever sold for the money.

**IT IS GUARANTEED TO GIVE PERFECT  
SATISFACTION, BOTH IN REGARD TO APPEARANCE  
AND TIMEKEEPING QUALITIES.**

**Cash must accompany all orders**, as we are selling this watch at cost price to us to introduce ourselves and our new Illustrated Catalogue for 1895 to the trade. As to our responsibility, we refer you to the Bankers' National Bank, any express agent or merchant in Chicago.

# LOCOMOTIVE FIREMEN'S MAGAZINE.

DECEMBER, 1894.

## STRIKES—LEGAL, ILLEGAL.

BY T. W. HARPER.

Can there be a legal strike? This is an important question and every man belonging to a union is interested in having the question finally and fully settled. Every one is interested in knowing whether he can or can not strike. Employers as well as employees are interested in knowing what are the rights of each when differences arise between them. It is proposed in this article to set out, as clearly as possible, the rights of each of the parties in case of a strike.

It has been declared by a writer on the subject of strikes (Cogley) that the wit of man could not conceive of a lawful strike. Judge Jenkins concurred in that opinion. Other federal judges since the passage of the "Interstate Commerce Act" and the "Anti-Trust Act" have been inclined to the same view. See opinion of Judge Spear in the case of *Waterhouse vs. Comer* and Judge Pardee in *re Higgins*, 27 Fed. Rep. 444. But to the writer it seems that these decisions were based upon a misunderstanding of what constitutes a "strike." They seem to think that there could be no strike without violence or intimidation. The idea of a peaceful strike, being a mere quitting of work, seems never to have occurred to them.

In the argument of the case now known as the Jenkins case, Mr. Clark, of the Conductors, prepared and submitted to the grand officers of the various brotherhoods a definition of a "strike" which was adopted by the heads of all the organizations and submitted to the court as their understanding of a strike. It is as follows:

"A strike is a concerted cessation of or refusal to work until or unless certain conditions which obtain or are incident to the terms of employment are changed. The employe declines to longer work, knowing full well that the employer may immedi-

ately employ another to fill his place, also knowing that he may or may not be re-employed or returned to service. The employer has the option of acceding to the demand and returning the old employe to service, of employing new men, or of forcing conditions under which the old men are glad to return to service under the old conditions."

Judge Jenkins refused to adopt this definition of a "strike" and said that a "strike" was:

"A combined effort among workmen to compel the master to the concession of a certain demand by preventing the conduct of his business until compliance with the demand. It is idle to talk of a peaceful strike. None such ever occurred. The suggestion is an impeachment of intelligence. All combinations to interfere with perfect freedom upon which such business shall be conducted, by means of threats or by interference with property or traffic, or with the lawful employment of others, are within the condemnation of the law. It has been well said that the wit of man could not devise a legal strike, because compulsion is the leading idea of it. A strike is essentially a conspiracy to extort by violence; the means employed to effect the end being not only the cessation of labor by the conspirators, but by the necessary prevention of labor by those who are willing to assume their places, and, as a last resort, and in many instances an essential element of success, the disabling and destruction of the property of the master; and so, by intimidation and by the compulsion of force, to accomplish the end designed."

On appeal to the United States Court of Appeals, the court, Justice Harlan of the United States Supreme Court delivering the opinion, said:

"If the word 'strike' means in law what the circuit court held it to mean, the order of injunction, so far as it relates to 'strikes,' is not liable to objection as being in excess

of the power of a court of equity. But in our judgment the injunction was not sufficiently specific in respect to 'strikes.' *We are not prepared, in the absence of evidence, to hold as a matter of law that a combination among employes having for its object their orderly withdrawal in large numbers, or in a body from the service of their employers, on account simply of a reduction of their wages, is not a strike within the meaning of that word as commonly used.* Such a withdrawal, although amounting to a strike, is not, as we have already said, either illegal or criminal. In *Farrer vs. Close*, L. R. 4 Q. B. Cases, 602, 612, Sir James Hannen, afterward Lord of Appeal in Ordinary, said: 'I am, however, of opinion that strikes are not necessarily illegal. A strike is properly defined as a simultaneous cessation of work on the part of the workmen, and its legality or illegality must depend on the means by which it is enforced and on its objects. It may be criminal, as if it be a part of a combination for the purpose of injuring or molesting either master or men; or it may be simply, as if it be the result of an agreement depriving those engaged in it of their liberty of action, similar to that by which the employers bound themselves in the case of *Hilton vs. Eckerd*, 6 Ell. & Bl. 47, 66; or it may be perfectly innocent, as if it be the result of the voluntary combination of the men for the purpose only of benefiting themselves by raising their wages, or for the purpose of compelling the fulfillment of an engagement entered into between employers and employes, or any other lawful purpose.'

In the *Jenkins* case in the court below, Judge *Jenkins* had enjoined the employes of the Northern Pacific Railroad Company "from so quitting the service of said receivers with or without notice, as to cripple the property or prevent or hinder the operation of said railroad," the court there holding that the men in employment of a railroad company had no right to combine to quit or strike in a body, even though the strike should be peaceful and unaccompanied by violence. The court of appeals in passing upon this question said: "Undoubtedly the simultaneous cessation of work by any considerable number of the employes of a railroad corporation without previous notice, will have an injurious effect and for a time inconvenience the public. But these evils, great as they are, and although arising in many cases from the inconsiderate conduct of employes and employers, both equally indifferent to the general welfare, are to be met and remedied by legislation restraining alike employes and employers so far as necessary adequately to guard the rights of the public as involved in the existence, maintenance and safe management of public highways. In

the absence of legislation to the contrary, the right of one in the service of a quasi public corporation to withdraw therefrom at such time as he sees fit, and the right of the managers of such a corporation to discharge an employe from service whenever they see fit, must be deemed so far absolute that no court of equity will compel him against his will to remain in such service or actually to perform the personal acts required in such employment, or compel such managers against their will to keep a particular employe in their service. It was competent for the receivers in this case, subject to the approval of the court, to adopt a schedule of wages or salaries, and say to the employes: 'We will pay according to this schedule, and if you are not willing to accept such wages you will be discharged.' It was competent for an employe to say: 'I will not remain in your service under that schedule, and if it is to be enforced I will withdraw, leaving you to manage the property as best you may, without my assistance.' And the court thereupon held that Judge *Jenkins* had erred in restraining the men from so quitting.

The court also held that if the employes should combine to quit the service of the receivers, *not for the purpose of benefiting themselves*, but simply for the purpose of impeding or hindering the management of the road in the hands of the receiver, that that would be a wrong which could be enjoined against. Upon that point the court said:

"But that is a very different matter from a combination and conspiracy among employes, with the object and intent not simply of quitting the service of the receivers *because of the reduction of wages*, but of crippling the property in their hands and embarrassing the operation of the railroad."

The reason being that in that case they would do an injury to the road without any corresponding benefit to themselves, the quitting simply being done for the malicious purpose of injuring the company. And the court said:

"We do not interpret the words last above quoted as embracing the case of employes who, being dissatisfied with the proposed reduction of their wages, merely withdraw on that account, singly or by concerted action, from the service of the receivers, using neither force, threats, persecution nor intimidation towards employes who do not join them; nor any device to molest, hinder, alarm or interfere with others who take, or desire to take, their places."

In the *Ann Arbor* case, decided by Judge Taft, he held that the employes of a railroad company had at any time the right to quit the services of the company, but that if they remained in the service of the company

they had no right to refuse to haul the cars of another company, because that would be a boycott and not a strike, and in the 23d Fed. Rep. 547 the court said:

"Anybody has a right to quit work, but in interfering with other persons working and preventing the owners of railroad trains from managing those trains as they see fit, there is where the wrong comes in."

In the case of the United States vs. Kane, Judge Brewer held that "Every man has the right to work for whom he pleases and go where he pleases and do what he pleases, provided in so doing he does not trespass on the rights of others."

In the case of the United States vs. Kane, Judge Brewer held that "Every man has the right to work for whom he pleases and go where he pleases and do what he pleases, provided in so doing he does not trespass on the rights of others."

In the Ann Arbor case above referred to the language of the court is, "Herein is found the difference between the act of the employees of the complainant company in combining to withhold the benefit of their labor from it and the act of employees of the defendant companies in combining to withhold their labor from them; that is the difference between the strike and the boycott. The one combination, so far as its character is shown in the evidence, was lawful, because it was for the lawful purpose of selling the labor of those engaged in it for the highest price obtainable, and on the best terms."

In the recent case of Thomas vs. Cincinnati, etc., Railroad, which was a proceeding for contempt against one Phelan, who was a member and organizer of the A. R. U. The Cincinnati, N. O. & T. P. Ry. Co. was in the hands of the receiver. The American Railway Union had a grievance against one George M. Pullman on account of his treatment of the employees in his car shops at Pullman. Phelan induced the employees of the receiver of the said railway to quit the service of the receiver because they were hauling Pullman cars. The men on that road were not in the employment of Pullman and in no way sustained any relations to him as employer or employee. They had no grievance against the receiver of the road in whose employ they were, but went out on what is called a "sympathetic strike."

Judge Taft in rendering the opinion sentencing Phelan to six months in jail for interference with a road in the hands of the receiver said, "now, it may be conceded in the outset that the employees of the receiver had the right to organize into or to join a labor union which should take joint action as to their terms of employment. It is of benefit to them and to the public that laborers should unite in their common interest and for lawful purposes. They have labor to sell. If they stand together, they are often able, all of them, to command better prices for their labor than when dealing singly with rich employers, because the necessities of the single employee may compel

him to accept any terms offered him. The accumulation of a fund for the support of those who feel that the wages offered are below market prices is one of the legitimate objects of such an organization. They have the right to appoint officers who shall advise them as to the course to be taken by them in their relations with their employer. They may unite with other unions. The officers they appoint, or any other person to whom they choose to listen, may advise them as to the proper course to be taken by them in regard to their employment. It follows, therefore (to give an illustration which will be understood), that if Phelan had come to this city when the receiver reduced the wages of his employees by 10 per cent., and had urged a peaceable strike, and had succeeded in maintaining one, the loss to the business of the receiver would not be grounds for recovering damages, and Phelan would not have been liable to contempt even if the strike much impeded the operation of the road under the control of the court. His action in giving the advice, or issuing an order based on unsatisfactory terms of employment, would have been entirely lawful. But his coming here, and his advice to the Southern Railway employees or to the employees of other roads, to quit, had nothing to do with their terms of employment. They were not dissatisfied with their service or their pay."

The court proceeds to discuss the objects of the A. R. U. in attempting to cause the employees of the railway to quit when they had themselves no cause for striking, except out of sympathy for the Pullman strikers and says that "such a combination is unlawful." He says, "it was a boycott. The employees of the railway companies had no grievance against their employers. Handling and hauling Pullman cars did not render their service any more burdensome. They had no complaint against the use of the Pullman cars as cars. They came into no natural relation with Pullman in handling the cars. He paid them no wages. He did not regulate their hours, or in any way determine their services. Simply to injure him in his business, they were incited and encouraged to compel the railway companies to withdraw custom from him by threats of quitting their service, and actually quitting their service. This inflicted an injury on the companies that was very great, and it was unlawful, because it was without lawful excuse. The distinction between an ordinary lawful and peaceable strike entered upon to obtain concessions in the terms of the strikers' employment and a boycott is not a fanciful one."

The court then proceeds to show that a boycott is illegal.

Boycotts have always been held illegal. They were so before the passage of any act

of congress on the subject of interstate commerce.

From the foregoing statements and authorities it will be seen that strikes may be lawful, as where they quit employments peaceably and for the purpose of bettering their own condition. Then strikes are illegal where they quit not to better their own condition but out of sympathy for other people, in which case the "strike" is not in fact a strike, but a boycott.

## THE CAPITAL COST OF STATE-OWNED RAILWAYS.

### NEW SOUTH WALES RAILWAY BUDGET.

That commercial undertakings should be conducted upon commercial principles, and by able business men, is a dictum very few will take exception to, and while it is most desirable that state enterprises shall be as nearly self-supporting as possible, yet the vastly different conditions under which railways are called into existence by public companies on the one hand, and by the state on the other, do not always receive that consideration which is desirable, if we are to judge accurately of the measure of success achieved by the results of subsequent working.

Undoubtedly the first object of a public company in constructing a railway is to secure a profitable return for the money of its shareholders, while the state, in undertaking such enterprises, is not only actuated by a desire to serve the inhabitants of the district to which the lines extend, but also to confer a benefit upon the community at large by promoting settlement, enhancing the value of crown lands, and increasing the consumption of goods, besides many other indirect advantages.

In other words, a public company will not undertake the construction of a railway unless there is a prospect of its commanding a volume of traffic sufficient to reward their enterprise, whereas the state is often ready to consider such undertakings, forced it may be by public opinion, and ostensibly for the reasons already indicated, although in the past it is open to question if public considerations always influenced the agitation for railway extensions.

Therefore if may be reasonably urged that it is altogether unfair to expect railway extensions by the state for the purpose of opening up new country for settlement to prove commercially successful from the outset; and in this connection we propose to invite attention to the whole question of the method of providing the capital cost for the construction of new railways from loan moneys, and throwing the burden of making good any shortage between the returns from the new lines and the amount required for the payment of their working

expenses and interest, on the general revenue of the already established, and otherwise profitable, lines.

In their annual report for the financial year just closed, our railway commissioners, after directing attention to the enormous burden of unprofitable lines and the prejudicial effect thereof upon the working of the railway system as a whole, go on to say: "A careful study of the figures will show that nearly every line provides sufficient traffic to pay working expenses, therefore it is the capital cost that requires to be kept as low as possible, and provided from some other source than loan moneys. By this means reduced rates could be given which are necessary for New South Wales, looking at the long distances over which so much of the produce has to be carried."

Now is not the whole case of the aim and object of state-operated railways contained within these few lines? If it is right that the capital cost of new railways should be provided from some other source than loan moneys, is it not also right that the capital cost of all state-owned railways should be provided in a similar manner? Then, if a state railway will pay its working expenses while carrying the produce of the country at low rates the justification for its construction seems to be established beyond cavil.

We do not hear of public roads being expected to give any direct return for the money expended in their construction and maintenance. Yet these roads are made simply for the purpose of opening up the country and to afford facilities for communication, and therefore the initial movement of construction is somewhat analogous to a railway. But in regard to the working, where the railways provide the power and the vehicles, it is admitted that the railways are on a somewhat different footing, still viewed in the light of state undertakings for the benefit of the whole community, it surely can not be urged that the difference is so great that in the one case the users shall pay not only the working expenses, but interest on the capital cost of construction, while in the other they shall pay absolutely nothing.

The total capital cost of the railway lines of New South Wales now open for traffic is £35,855,271, and as the interest payable may be calculated at an average of, say 4 per cent., the amount paid out of working for interest upon the capital is therefore about £1,434,210 per annum, and this must limit the concessions which the railway commissioners are enabled to make, as it is an unwritten law that the railways are supposed to pay not only working expenses, but also the interest which is due on the money borrowed for construction.

The question of relief from this burden

has, as is apparent from state papers laid before parliament, more than once engaged the consideration of the railway commissioners, and in a minute submitted by them soon after they took office, in regard to branch lines, they suggested that the capital should be kept as low as possible, and in order to assist this that the land required for railways, which in the past in many cases had entailed a considerable capital cost, should be given free by the landowners combining who would be benefited by the new extensions, and this, they added, should be *sine qua non* in connection with the making of lines of this character.

The matter, however, was more strongly pressed in their report laid before parliament in regard to the proposed railway from Grafton to the Tweed *via* Lismore, the first section of which, from Lismore to Byron Bay, is now in working, and which, in passing, it may be said, according to the last report, is proving a very unprofitable line to work.

In reporting upon this line, the commissioners stated: "We feel that the country urgently requires a railway, and are of opinion the demand should be complied with, although it will be some considerable time before the large capital required for its construction will receive a fair return; and we, therefore, think an exceptional course should be followed in regard to its construction. Along the route of the railway, and within ten miles of it on either side, there are crown lands to the extent of 622,000 acres, at present valued at £761,000; and undoubtedly if the line is made, this land, if sold judiciously, would realize to the state quite if not more than double this amount. And as the cost of making the railway will be very heavy, owing to the numerous waterways to be crossed, and the broken character of the country, we would suggest for the consideration of the government that the railway capital should be credited with one-half the money realized from the sale of this land, from the time it is decided to make the railway; the railway commissioners to be allowed to have a voice in the arrangements for the subdivisions and mode of sales of the land, which could otherwise be sold in accordance with the provisions of the law relating to crown lands.

"We are aware that our proposal is one having no precedent in this country, but it is doubtless within the knowledge of the government that to a large extent lines have been made in America on the land grant system, the railway companies in that country having had conveyed to them alternate blocks of land to a depth of twenty miles back from the railway on either side, and the sale of these lands has enabled

railways to be pushed forward into districts which could not otherwise have had such communication.

"This district, in being isolated from the trunk line, cannot contribute any additional traffic thereto; and in consequence of this, and also because of its great richness, we think, in the interests of the state, we are justified in making this proposal for consideration.

"In the sister colony of Victoria, too, the government write down the railway capital each year to the extent of £200,000 from moneys received from the sale of crown lands, the total amount so credited up to June, 1888, being £2,200,000."

While, however, this must provide relief from the burden of unprofitable branch lines, the large question of capital spent on the original main lines is still open; but, no doubt, if relief were afforded by the reduction of the capital of the branch lines (and each annual report shows the burden the interest is on the system), as population grows from year to year, the volume of traffic on the main lines would become greater and a proportionately larger profit could be obtained, so as to enable a sum to be set apart for the establishment of a sinking fund to write down the capital cost of the lines.

With relief, such as has been outlined here, the commissioners would no doubt be able to considerably enhance the benefits which they have already conferred by the concessions which they have been able to make in favor of the producing interests of the country.

## WRITTEN CONSTITUTIONS.

BY JOSÉ GROS.

Our present generation is enveloped with a class of economic doctrines admirably adapted to puzzle and discourage the average plain man in search of truth for a better social status than the one we are entangled in. The case with our nation becomes far more complex than with any other, because of our especially complicated political system. We have so many wheels and counter wheels to be touched and combined before any radical measure can go through under the popular impulse; so many traditions and national infatuations to be pulled down before the people feel courage enough to stand by certain fundamental perceptions; and all because of our worship towards our own written constitutions, state and national, fixing limits in all directions, good, bad and indifferent. The very men we send to our legislative bodies are tied up hand and foot, as it were. Our very political parties are bound up within narrow areas of action, by our own constitutions.

Is there any wisdom in that? Does not that imply absence of confidence in ourselves, as well as in the men we see fit to choose to carry out our own ideas?

Men have never realized that a mixture of good and evil is far more fatal than clear evil itself. Why? Because the latter is bound to be so injurious to most people, that it will, in no time, evolve a grand popular reaction towards the good; while the former, any mixture of evil and good, is very deceitful, and reactions come then at long intervals only, and seldom powerful enough. Evil in itself cannot last very long, because of its essentially self-destructive power; but you mix some good with some evil, and the latter receives from the former a portion of its self-existing force. Hence the great mistake of giving to any group of men the power to do some good and some evil. It would be better to give to some men the power to do all the good or all the evil they may like, always provided you leave the people free to rapidly kick out of office every man, up to the highest supreme judge, or any other that proves unfaithful to duty or not responsive to the popular will. Of course it is much wiser to leave to the people the power to do all good and all evil, just as rapidly as they may see fit. The people would then soon suppress all evil because of its injurious effects to all of them. Evil is only beneficial to the few on top, or to the bold and the shrewd; beneficial after a very poor fashion, as a matter of course.

Let us now see on what general ideas have our written constitutions been fixed up. When we study them carefully we find them presided by absence of confidence in the people and not much confidence with the men the people may elect. Perhaps it is yet a little worse than that, because we can notice that we give to our men, to our legislators, just as little power to do good as possible, short of none, in fundamentals anyhow, and about as much power to do evil as compatible with the aggrandizement of the few, and keeping the many more or less narcotized through poverty, hard work and a tincture of good will to mask our refined oppressions.

If you doubt the correctness of the above look at the course of our historical development. Can you tell us of any sentence in any of our constitutions specifically establishing any principle with which to make it difficult for legislators to enact any of the wrong laws through which we have always been victimized, we, the working masses? To be sure, the writer has never been much of a worker, but vividly realizes our wholesale injustices all the same. Can you point out any essential distinction between the general course of our legislation and that which destroyed old Egypt, old Persia, old

Rome? Have we not developed the same evils which make a Russia and a Turkey possible to-day? The situation with us is more provoking and aggravating because of our advanced political system producing the same crude results of the old despotisms.

The very fact of written constitutions fixing such and such limits to the present generations or any fragment thereof, that alone means that the dead are anxious to rule the living, that the men of to-day want to rule those of to-morrow, next year and so on. Even if we were sure of our superior wisdom over those who shall come later on, why to bind them in any way whatever? Can we conceive of manhood without freedom, without the power of adhering to what is good because of its intrinsic beauty and avoiding evil because of the sorrows that it will bring?

Look at the way with which God has been dealing with men from the beginning. Far above all human constitutions, written or traditional, there is a grand, universal constitution; forever the same, never subject to any change; always answering to the purposes for which it exists; always working for universal good. Yet, God has left us free to disobey every one of his laws in nature and in morals. We have to pay for every transgression; but our freedom remains. The grave alone stops it. And that alone makes manhood possible, that freedom of choice, that initial force, forever under the dictates of our reason, our emotions and volitions. And it is because our human constitutions have always been packed with unnatural restrictions, in defiance of the divine constitution, that civilization is yet half drunk, promenading around the old abyss of destruction that has already laid flat so many nations, once not as bold as the boldest to-day.

Yes, the social organization has always come with our mean, silly devices to fix limits to human freedom, not for the purpose of Peter leaving John as free as himself; but for that of encouraging Peter to get the best of John, provided he did so under certain stipulated forms. Because, of course, that freedom, equal freedom, does not mean that power of might over right. It means the opportunity of each one to develop according to his healthiest aspirations, and never interfering with the same process in any other human being. That is just what happens in nature with every blade of grass, tree, large or small, flower, of whatever kind, and living organism. They all attain the maximum beauty and usefulness for which each was created. That is what would take place with every human being under a social organization resting on equal freedom, and not on a mass of foolish re-

strictions, on false pretences, on pharisaical conceptions of life.

Constitutions are all right, but they should be made by the living, not by the dead. They should not rest on traditions as that of England. Much less should they rest on fixed, narrow limits, written up, binding up all public opinion, as our own and those of most other nations to-day. Still less should they rest on minority rule as our national constitution. A minority of 15 per cent. of the voters, or less, can forever stop any fundamental amendment that may be necessary to save the nation. Is there any plain common sense in that? Is not that the dead ruling the living with a vengeance, the grave lording it over all life, and over the advancing needs or intelligence of the race?

Reflect now on the unpleasant fact that after nearly three centuries of so-called political freedom, we are to-day at the mercy of the most fearful and fatal oligarchy that ever existed, a combination of 20,000 influential clergymen, 20,000 shrewd lawyers, and 20,000 large capitalists. We have there the industrial, the political and the religious elements, the wrong religion, of course, blended in hidden ramifications, and standing behind the throne of all our constitutions, in defense of laws which are the emblems of selfishness and greed, that eternal human desire of keeping the working masses under foot. If we do exaggerate let us have the proofs. We are always ready to abandon our incomplete perceptions for better ones.

From all the above we desire to convey a final conclusion. It is as follows: No fundamental economic reform is possible to us, and none would work, even if placed on the statute books, until the people grasp that political power it never had, and belongs to the people, if freedom is to ever be something more than a childish platitude.

We mean, by that, that the working masses should not limit themselves to vote for a group of men. They must also vote for specific enactments. They should be few and fundamental, the fewer the better provided they rest on "equal freedom and equal justice." And mighty few laws of that kind are necessary, for the life of nations to run smooth. The republic of Athens had very few laws in its best periods, and we can do much better than Athens ever did.

Besides, if there is anything self-evident in social growth, it is that the living should not be ruled by the dead. Each generation, or fragment thereof, should be the arbiter of its own destinies. That means that all principle in law should be subject to rapid change or modification when a majority of the nation so decides.

## POLITICAL GODS.

BY WILFRED P. HORLAND.

Each nation has its political gods; its deities, great and small, which it worships, and to which it appeals for sanctions for all its political acts.

These gods bear about the same relation to the political life of nations as do the religious gods to the spiritual life of individuals; that is to say, the same remarkable tendency which individuals exhibit to wander away after false gods while clinging fast to the fiction that they are all the time worshipping the true ones, may be observed with respect to nations in connection with the worship of their political gods. While assuming, each one, to worship its own deities as the only true ones, nations have wandered away after false gods, have appropriated each other's gods, and have ceased to worship all but the form of their own particular political deities.

The boss god of each nation's political pantheon, king of the political Olympus, the Jupiter which all nations worship alike and in common, is, of course, "Patriotism." But the political boss god necessarily assumes different forms and becomes invested with different attributes in different nations; each nation by itself has its own conception of the attributes of the great deity, and thus while "Patriotism" always means the love of country, each nation has its own method of giving expression to that meaning. This necessitates a host of minor deities all engaged in paying homage to the great one. These minor deities are separated in each nation by distinctive characteristics of some sort or other from the minor deities of all other nations, but according to each one's conception of its meaning every nation's minor gods are devoted to the worship of "Patriotism;" that is to say, all political-god worship is supposed to be inspired by the love of country.

The chief deity in our pantheon is "The People." By earnest and unrelenting political worship of "The People" we are taught that we can best propitiate the god "Patriotism." The boss god of the English, on the other hand, is "The Constitution." Thus, the rites of "The Constitution" worship in England are supposed to satisfy the demands of "Patriotism" to the same extent as the rites of "The People" worship in the United States. And thus it goes throughout the nations. The political deities subordinate to these, again, are numerous, but do not require much attention just now.

The development of this political-god worship has been such as to land many of the deities into strange pantheons and produce considerable incongruity in the exercise of the rites of worship. There has been some

more or less unconscious trading of deities between the nations; those which properly belong to one nation have been appropriated by another, and *vice versa*, and as this process has been unaccompanied by any change in the rites of worship we have the result that nations are rendering unto one god the forms of worship due unto another. Probably because of affinity in political relationship, this process is more noticeable with respect to England and the United States than elsewhere.

"The Constitution" has been a great big god in England for several centuries, and the English people have displayed remarkable religiosity in his worship. Since the days of Magna Charta the rites of constitution worship have been celebrated almost uninterruptedly, and with most imposing grandeur, by the English nation.

Since the birth of our nation a like religiosity and ceremonious attention to grandeur, and imposing character of worship, has been exhibited by the American nation in rendering homage unto its god, "The People." Every political rite undertaken since the foundation of the government has been dedicated to the worship of the people. It has been well recognized that through the worship of the people only could the American conception of the attributes of "Patriotism" be satisfied, and the big god of all be induced to deal kindly with the American nation. It would not be surprising, then, to find the people above the constitution in America and the constitution above the people in England. This would be the natural course of development springing from each nation's form of political worship, but it would be surprising, or, rather, it is surprising to find the order inverted.

It has often been remarked that England is much further advanced in the cause of social and industrial reform than we; that the interests of the working class are more fully considered and protected in legislation there than here; that the people in England are politically a stronger force and exert a greater influence on the policy of the government than do the people in the United States; that, in short, the English government is more a government of the people than is the government of the United States. At first sight it does appear strange that a politically free nation, worshipping "The People" as its political god, should thus lag behind another nation whose political advantages are not so extensive and whose form of worship is so differently conceived. But a little investigation will serve to dispel the appearance of strangeness; a little investigation will show that our political worship is incongruous with its object, that England and the United States have traded political gods. With all our worship of the people we have set our constitution above

the people, and with all England's worship of the constitution she has set the people above the constitution. There is the explanation of the observed phenomenon.

In England parliament is supreme, and with all the English worship of the constitution there is no constitution that stands between the acts of parliament and the people; the form of government is such as to enable the people to express all of their political power directly through the acts of their legislative body. What men call the English constitution is not a constitution at all, in the sense in which we understand the term; it is merely the body of statute law enacted by parliament and the judicial decisions which have been made in conformity with that body of law. The English constitution, therefore, is contained in hundreds of volumes of statutes and reports of judicial decisions; it is continually changing. The people of England have no guarantee that what is called the constitution will stand the same at the end of any given session of parliament as it stood at the beginning. "The British constitution," said James Wilson, in 1788, "is just what the British parliament pleases." This supremacy of their legislative body over any rigid form of constitutional law enables the English people to exert such political power as they have much more effectively than the same, or even a far greater power, could be exerted in the United States. No question of constitutionality ever rises up against an act of parliament; the only question for parliament to consider in connection with any proposed legislation is, "is it right?" or, "is it expedient?" Never, "is it constitutional?" Then, whenever the English people have succeeded in securing a majority in parliament to favor any measure of reform; any change in methods of government, or application of industrial or economic theory; any specific measure, of whatever character, supposedly for the people's benefit; they may be quite sure that the thing they have in view will be accomplished beyond any question of doubt. This is a very important political fact; it is fraught with many important consequences for the English people, and is sufficient to explain an advance in practical reform legislation which is apparently incongruous with the amount of political power possessed by them; and it shows that in "The Constitution" the English people are worshipping a false god, or, more accurately, rendering homage unto a god whose place is not at all in their pantheon. In the United States the same process is going on, only with the order of worship inverted. "The Constitution" is the god we really worship while we are paying homage to "The People."

We now observe that the English parlia-

ment is supreme in legislation, not bound down by any rigid form of fundamental law, and as whatever legislation it enacts is not subject to review or reversal by any other authority besides itself, the common people, the working masses, may dictate forms of governmental policy and secure such laws as they demand just to the extent that they are able to impress their will upon a proper majority in parliament; and just to the extent that the people have captured parliament has their cause triumphed in England. Such political power as they have is fully utilized; there is none of it goes to waste.

In the United States, on the other hand, the people have no guarantee that they may secure such legislation as they demand, or be able to dictate the pursuance of any particular line of governmental policy, even though every member elected to both branches of congress be in favor of their demands, should the thing demanded happen to contravene the provisions of the constitution. The result of this condition of affairs is to render a great deal of the people's political power useless; they can only use it in a certain particular direction previously marked out, and when they desire to step outside of the beaten rut of legislation their political power is as though it had never been. There is a further result to lead our legislators to concentrate their attention almost wholly on the legal, or constitutional aspect, of any proposed legislation and lose sight entirely of its moral aspect. The question primarily considered, in connection with any proposed legislation, is not, "Is it right?" "Is it just?" "Will it benefit the people and tend to produce better conditions of existence?" but simply, "Is it constitutional?" It is always competent to raise the question of legality against any act of the people's representatives, and this is the principal argument always used by the opponents of proposed laws to defeat them; no matter that a law may be shown to be both expedient and based upon the most unimpeachable moral considerations, no matter that its operation may be in the interests of good government and its effect to confer indisputable benefits upon the mass of the people, if it can be shown to be simply out of harmony with the provisions of the constitution it is absolutely void and the same as though it had never been enacted; no repealing statute is needed to get rid of it. This gives undue prominence to the mere question of legality, and it has the further effect to confine our legislators to a narrow range of legislation, to hold them too closely to precedents; they are slow to undertake any needed measure if there is any suspicion as to its constitutionality.

Says Judge Hare, in his *Lectures on Con-*

*stitutional Law*: "The English legislature is free to follow any course that will promote the welfare of the state, and the inquiry is not 'Has parliament the power to pass the act?' but, 'Is it consistent with principle, and such as the circumstances demand?'" These are the material points, and if the public mind is satisfied as to them there is no further controversy. In the United States, on the other hand, the question primarily is one of power, and in the refined and subtle discussion which ensues, right is too often lost sight of or treated as if it were synonymous with might. It is also taken for granted that what the constitution permits it also approves, and that measures which are legal cannot be contrary to morals."

Of course, it is answered, when the non-supremacy of the people's representatives is pointed out as detrimental to the people's interests, that this is necessary to prevent the legislative branch of the government from exerting undue influence upon the other branches, and that if invested with supreme power the representatives would be likely to abuse it; it is also urged that the people are supreme, because while the constitution is above their representatives they are above the constitution, and if it is found that the constitution sets limits to legislative action that operate to the people's detriment there is always the remedy at hand that through appropriate process the constitution may be changed. This is true in theory, and the people are, in this sense, supreme in authority, but how does it work in practice? There have been very few changes in the federal constitution since the instrument was first constructed. This is not because changes have not been needed, nor because there has been no attempt to bring them about, but because of the extreme difficulty of securing the necessary force to bring the changes about. Although the amendments to our constitution number fifteen, it is safe to say that not a single vital change has ever been made in a regular manner and by the free will of the requisite number of people.

The first ten amendments are really not amendments; they are in the nature of a bill of rights, and must be regarded as a supplement to the constitution rather than as changing it in any particular. The eleventh and twelfth amendments, although effecting changes in the body of the instrument, touch no really vital political principle, and merely correct minor defects which had disclosed themselves in its working. The thirteenth, fourteenth and fifteenth amendments are the only ones that have established and confirmed vital political principles in contravention of the terms of the original instrument, and how were they passed? How was the constitutional ma-

jority, necessary to make them a part of our fundamental law, secured? Not by the free will of the people of the requisite number of states, but under the stress of military and political coercion, exercised by the federal power against a portion of the states. Notwithstanding the vital import of these amendments, and their evident necessity to confirm the principles established by the war, it is safe to say that had the coercion of the northern military power been removed from the southern states, and had not ratification been forced upon certain of the states as a condition for readmission of their senators and representatives to congress, they would not have received the requisite majority of states.

Many amendments have been suggested at various times by the presidents, or brought forward in congress by members, but very few of these have ever obtained the requisite two-thirds vote of both houses. Twice in our history, in 1789 and 1807, amendments have been passed by congress, but failed to receive the requisite three-fourths majority when submitted to the states. Once, in 1861, an amendment was passed by congress, but the breaking out of the war prevented its submission to the states. In the Forty-ninth congress no fewer than forty seven propositions were introduced for the amendment of the constitution. It does not appear that any of these propositions were voted on, but an enumeration of the more important ones will prove interesting, as indicating the class of legislation congress seems constitutionally debarred from enacting, and as indicating a class of subjects which there is an increasing sentiment in this country should be congressional legislation to cover. Among the proposals for amendment mentioned were the following:

To enable the president to veto items in an appropriation bill; to vest the election of the president directly in the people; to elect representatives for three instead of two years; to choose senators by popular vote; to prohibit the sale of alcoholic liquors; to confer the suffrage on women; to empower congress to limit the hours of labor, and to pass uniform laws concerning marriage and divorce; to forbid congress to direct the payment of claims legally barred by lapse of time, or to pass any local, private or special enactment; to enable the people to elect certain federal officers; to forbid the states to hire out the labor of prisoners.

There would seem to be considerable deficiency in our fundamental law when none of the subjects here indicated are within the range of legitimate federal legislation; yet none of these proposals were pressed strongly, because it was felt to be impossible to incorporate them in the constitution

by the prescribed process, even should they secure the requisite majority in congress. So much for the people's power of control over the instrument they have set up above their legislature; so much for their supremacy over the limitations on the power of their lawmakers; so much for their power to change the attributes of the nation's political god.

Nevertheless, the constitution has been changed by interpretation and usage until it is quite a different instrument than it was to the view of its creators; it has been held to create sanctions for acts which would never have received the approval of the founders of the government; and it is this process of interpretation that is bound to create dissension and probable serious trouble when the nation is once brought squarely to face the important social and economic problems that are now pressing for solution. We are very likely to find that a supreme legislative body is the very thing we most need in the very near future. Representatives of the industrial interests of the nation are crying out against the unconstitutionality of certain acts that have been committed by those who have obtained control of the government, but the day is not far distant when they will find this cry turned against themselves and awake to the fact that the constitution will become as great an incubus upon them as it now seems to afford them a sort of protection.

There is one point that may be mentioned here as affording an indication of the direction opposition to the people's demands will be likely to take. There is now considerable of a demand for nationalization of the railroads. It is urged as one of the many arguments against this proposition that the measure is unconstitutional. It is answered to the argument of unconstitutionality that it has no force, as congress has the right to take possession of the railroads either under the postroads clause of the constitution or under its military power. This may be true, but if constitutional principles are to have weight in governing such cases as this, what is to be done about that broad general principle concerning contracts which has been established on Sec. 10, Art. I, of the constitution? Since the Supreme Court decision in the famous Dartmouth College case in 1818, the constitutional principle governing contracts has been held to extend to the franchise of corporations, and such franchises cannot be revoked nor altered except with the consent of the corporation. Although a state may create corporations it cannot destroy them without their consent, nor in any way alter the terms of their franchises, as such action would be to impair the obligation of contracts. A fran-

chise is a contract between a corporation and the state which grants it.

Says Judge Cooley: "By repeated decisions of the federal supreme court it has been authoritatively and conclusively determined that the charter of a private corporation is to be regarded as a contract between the corporators on the one hand and the state on the other, and that whatever stipulations are contained therein which are intended for the benefit of the corporators, and operate as an inducement to them to accept the charter, are promises by the state based on valid and sufficient consideration, and not subject to recall except with the assent of the corporation itself. \* \* \* To avoid the force of the principle that a corporate charter is a contract, which often-times operates in some unexpected manner, and, perhaps, unjustly to the public at large, the people of some of the states have made express provision by their constitutions that all charters of private corporations granted by the legislature shall be subject to repeal or amendment at the legislative will. A provision of this nature is a limitation upon the power of the legislature in granting charters, and while it cannot affect any that are in existence when it takes effect, it attaches the quality of modification and repeatability to any afterwards granted, and all who accept them do so with full notice of the fact. The charters are still contracts, but contracts with a reserved right on the part of the state to amend or terminate them."

This principle is susceptible of extremely wide application, and no other constitutional principle is required to be brought forward when the proper time comes, to combat the demand for government ownership of any of the great monopolies that are now resting on corporate rights. It will not do to worship the constitution as our political god; we must return to the worship of the people if we would escape great evils.

### TICK REMEMBERED.

BY FRANK A. MYERS.

It was the day before Christmas. Tick (that is the way he was called for short—his real name was Ticknor Faber)—Tick had been off duty for more than two months. For a wonder he had not been dropped from the pay-roll of the company. It had a generous spirit for once. The reason for this will appear later on, though it may not be expressed in words.

Tick had been badly hurt while in the line of his work, and was just able to go around a little, by the aid of a third leg—a cane—at the time we speak of. While at work as a fireman on one of the branches of the L. & N. system, the accident happened. He did not think he had done any-

thing noble or dangerous, but everybody else did. He was not the kind of fellow to magnify his own acts. His friends said he was entirely too modest in his estimate of himself, and as one of his friends we are bound to say we think the same thing.

In all his suffering he never grumbled about his injuries or spoke one word of regret at what he had done. That's the kind of a fellow Tick was.

He was a handsome young man, manly and pleasant in his ways and words. It is scarcely a compliment to say that everybody was his friend, for, if possible, they were more than that. There are persons in the world that you like and can't help it. Tick was one of that kind.

On this Christmas eve Tick was to be married to one of the prettiest, sweetest young ladies of the town. What Tick regretted most was the fact that he was not "at himself" quite on this most important occasion of his life. He said he disliked to give a "wretched body" to a girl of such a noble character. While "weak in the flesh," in spirit he was "all right." Now, this was just like Tick.

"Essie, I won't hold you to your promise to marry me in this condition, if you feel in your heart that you'd rather not," he said to Essie Herndon one day when she came to see him. He had studied this all out, and putting his own heart aside had risen to the disinterested and sublime position of thinking only of her good. Few can do this. Those who do are truly great.

"No, Tick; I love you more than ever, now that you need love and help," she responded, "and we will marry Christmas eve if all the world said no." Glorious, faithful Essie!

So the wedding was to take place at Tick's home. He was not able to go to the bride's residence, and she cheerfully said it should occur at his home. A postponement possessed a horror for her. It seemed to auger no good. And yet she was not superstitious in the least degree.

It was eight o'clock in the evening. Tick sat in an easy-chair, before a cheerful fire in the grate, in a fine new suit of clothes made expressly for his wedding. The lights were burning brightly, and the room was in the best of order. He was ready, expectant, and waiting patiently.

"How do I look, mother, for a groom?" he asked with an inward laugh. He was not his ideal of a wedding, such as he had always pictured his own should be.

"Why, Tick, to tell the truth, I don't think you ever looked better," answered the mother, sitting down by his side and looking kindly in his brown eyes. "I think you have so much, on this happy evening, to be truly thankful for. You have life, and a fine prospect of soon being as well and

sound as ever. Then to-night you will be joined to a life-partner, who is one of the sweetest, loveliest girls I know of," pursued the tender mother, in whose hair were seen silvery threads among the golden. She loved Tick, she thought, more than Essie did. "It is such a blessing to marry a good girl like Essie."

"But I am happy, mother. I didn't ask complainingly. And I think I know Essie, know every impulse of her mind."

At this juncture the door bell rang. They understood.

A troupe of people came in, until there was scarcely standing room—Essie, the minister, and a great swarm of the "boys" and their wives and "best girls." Tick was not a little surprised and glad, to see so many of his old friends come on this eventful evening.

There had been, upon entering, not a little stamping on the veranda to free the shoes of the clingsnow. They all brought with them their good humor and best smiles, and they took no pains, if we might judge by the remarks made, to conceal their invaluable attendance upon such an occasion.

What surprised Tick the most was to see Mr. and Mrs. Ernest Hale there. Before he had rendered them the service that resulted in his injuries he had not known there were such people in the world. And they had with them their bright, sweet little girl, Hallie. They lived many miles away in another city. Tick seemed to be the only one of all who did not know previously they were going to be there.

Hannibal was the end of a division, and the shops were there. Consequently a goodly number of the "boys" of the throttle, the brake, the punch and brother firemen were present.

Seats were finally found for all in the warm, comfortable room. After the minister had removed his gloves and rubbed his hands a few times before the fire, and looked about with a sort of secret light in his radiant eyes, he had Essie Herndon stand by the side of Tick. Then Tick stood up, but with a very apparent effort, and steadied himself on his cane. In as few words as possible the servant of God married them.

After they had sat down together "Dad" Holly, the engineer with whom Tick had always made his "runs," rushed up first and congratulated them, then Jeff Primus, the conductor of the train at the time of the accident, then Mr. and Mrs. Hale, and even little Hallie, and finally all the others. Tick and Essie took the hands of their friends with no little delight, and received their kind wishes with a feeling of awkwardness. The parents of Essie as well as

the parents of Tick held their hands a little longer than the rest.

Some of the remarks made in wishing them well set everybody in a jolly spirit, and laughter bubbled out like water from a hill-side spring, pure and rippling. The key-note had been set for the rest of the evening. You know, anyway, that everybody feels that, if ever in life, a wedding is the proper time to be happy and gay.

"Hold on," now cried "Dad" Holly to the surprise of most of the jolly crowd; "I want to put in my say right here. I see Tick won't do it. He's just a little too modest for that. I'm going to tell all on him, now, while I'm at it. I think it ought to be told on him, and I feel I ought to do it, too. Mr. and Mrs. Hale want me to tell it, and so does little Hallie."

At this point Hallie went up and confidently climbed upon Tick's knee and said loud enough for all to hear:

"I like you and Essie, and I want to kiss you."

This embarrassed Tick more than ever, but he bent over and Hallie kissed him.

He knew what "Dad" Holly was going to tell, and wished he wouldn't. But there was no help for it. Like the politician, he was in the "hands of his friends," and would have to take whatever they did to him. Let would be philosophers sneer at the remark, if they will, but it was his fate on this evening. How could he help himself and be polite, as he was obliged to be?

"That's right, Hallie," resumed "Dad" Holly. Everybody was pleased at Hallie's affectionate act. She had heard her parents praise him in the very highest terms ever since that noble deed of his, and she had come to think Tick was the nicest and best fellow in all the wide world. The truth is there were none better.

"I'm going to tell you how Tick got hurt." By this time "Dad" was standing almost in the middle of the floor under the bright light, and every one was looking intently at the earnest man of the throttle-lever. The smut of the engine had all been washed off, and "Dad" looked as well as he did on his own wedding day. This hero of the rail, this man of many hair-breadth escapes from a horrible death, continued, although he had repeated the story so often everybody knew what was coming.

"It was a bright, pleasant day, more than a month ago, now, and by some means we were a few minutes late. Tick was shoveling in the coal and faithfully keeping up steam. We were trying to make up the lost time, and the engine, faithful to her duty, was quivering in every muscle. She was not walking nor going in a j-g trot, she was just flying. I think at that moment we were running sixty miles an hour. But

the road was good, and track clear, and I just let 'er go for all she was worth. We fairly flew. The wheels were turning as fast as steam could make them.

"Well, we—it was near Circleville. There is a big curve and cut there just before reaching the depot." Here "Dad" looked at Mr. Hale as if for confirmation of this statement. "The cut shuts off the view around the curve, and a fellow running an engine has to go it rather blind like until he strikes straight track. Just on the outer edge of the town, Mr. Hale here, present with us this evening, has a fine house in which he lives. It is a nice place, with a fine yard in front, coming almost down to the right 'o way. He is a business man in Circleville, and prefers to live in the suburbs for—for the peace he finds away from the bustle of the busy town after his day's work is over. Little Hallie plays in the yard, always attended by her friend, a fine Newfoundland dog. She was never known to leave the yard, and she was often left alone to play in the smooth, grassy yard for hours. We, in flying by, had often seen the little thing playing there, and thought how nice it was—was for her.

"The moment we shot around the curve I saw the situation. I at once threw her over, put on the air and pulled open the sand lever. Tick straightened up, looked out through the open window, and almost before one could think he ran out along the running board, climbed quickly out upon the pilot, and lowered himself to the bottom. Then he leaned out as far as he could, and with one hand holding on, with the other he made ready to snatch the little girl from the jaws of death. Little Hallie had straggled from the yard, unknown, and seemingly entirely unconscious of her danger, stood in the middle of the track looking at us thundering down upon her. The "49" never slipped a turn. I kept giving her sand, and just as we reached the child she started to run. I shut my eyes and scinged. I expected every bone in the little thing's body to be ground up. There seemed to be no help for it. I looked again. The engine was slowing up somewhat. Just then I saw Tick seize her firmly by the arm and snatch her up. The suddenness of the action threw her little body against him with great force, breaking his grasp upon the pilot. For an instant he wavered, and then he fell. With a tremendous push of the feet he threw himself out and off the track as far as he could. The hand that was broken loose from the pilot also clasped the little thing. His only thought seemed to be to save the child. I shuddered as I saw him fall, expecting both to be ground to death. As he fell out the pilot beam struck him in the side and knocked him with fearful force to the

ground. I said to myself, 'Good-by, Tick.' But he still clung to the little girl—that very little girl there on his knee now. When the train stopped, a few rods ahead, I ran back as quick as I could. Tick was past speaking—in fact, he was so still I thought he had been killed outright. Little Hallie had gotten up and was crying. Luckily she was not hurt. Tick's body had protected her from the blow of the engine and also in the fall.

"I picked Tick up and carried him to the baggage car. In a short time he revived a little, but complained of his side. He was hurt internally. The passengers were all interested in the young hero, who risked his life for the child, when they heard the story. We took little Hallie along to the depot, not very far away. The news flew over the town like lightning, and soon a crowd of people filled the platform, eager and inquiring about 'the man who was killed while trying to save the life of a little girl.' Mr. Hale here came also, and took Hallie. He offered everything a man could offer to help and save the life of Tick. Tick could barely speak. I had hopes for him, for he was a stout, healthy, light-hearted fellow, and I felt that if anybody could pull through such injuries as he had he could. With the brakeman for a fireman we went through to the end of our run.

"And here we are to-night celebrating his marriage to one of the nicest young ladies in all Hannibal. She is worthy of such a worthy young husband, and we all have nothing but good wishes for them. Little Hallie has a right to sit on his knee."

"Dad," after telling this story in his spirited way, sat down. Essie was seen to hold her handkerchief a moment to her glistening eyes. Tick held down his head like one who had committed some crime. All present broke out into applause, and Jeff Primus, the conductor, proposed three cheers in his enthusiasm. And the cheers were given heartily.

They all cried a speech from Tick, but in his reservedness he opened not his mouth. But he lifted his eyes and cast a grateful glance at his affectionate friend, "Dad" Holly. "Dad" saw it, and read all that was in it.

With dignity but with a generous heart Mr. Hale now walked forward and presented a paper to Tick. He took it with the wondering air of one who thought he ought not to do so. He looked up inquiringly. So did Essie. Mr. Hale read their thoughts and smiled kindly.

"It is but a little thing I have done for you in return for what you did for Hallie, my wife and myself. I never can repay you, for that matter. But I have made an effort to do so, in at least some small de-

gree. I have made you a wedding present—I might say also a Christmas present, since it is here upon us—of that paper. It is a deed to a house and lot in this city. The property is in a nice part of the town, and I think you and Essie will like it. The house is furnished throughout, and awaits you and your lovely bride whenever you shall see fit to go into it."

Tick's eyes now glistened and a surprised tear of joy trembled on his eyelids. His arms went around Hallie something like they did when he snatched her from the track out of the horrible fate that would otherwise have been hers. He looked at Essie. In his happiness he knew not what he did. All this was a complete surprise to the two happy young people. The rest, of course, knew all about it beforehand. In fact, the lot "Dad" Holly selected was the one Mr. Hale bought for them.

"And now once again," resumed Mr. Hale, "I heartily extend my kindest and most inexpressible good wishes to you. I have only to add that as long as I have a home you and yours shall have one also. I believe the others here have a word to say to you, so I yield the floor."

Mr. Hale sat down. After a moment of silence Tick managed to say:

"I thank you, Mr. Hale—I thank you. It is gratifying to be remembered by our friends. I—I—don't—deserve—all this."

"O, Mr. Hale, how kind in you!" Essie said, feeling that she must say something. It was all she could get out then. Something seemed to choke her. It happens that way sometimes when our hearts are full to overflowing.

At this, Jeff Primus stepped forward. Tick wondered what now—the "boys" themselves were coming, and he knew what great hearts they had.

"We never go back on a friend," said Jeff. "Here take this." And he pressed a purse into his hand that contained five shining pieces of gold of the value of twenty dollars each. "It'll help you buy some grub to start out on. The boys wanted to remember you some way and make you a Christmas-wedding present, and they have given you a little gold. It is as free as water—the boys gave it. Take it and God bless you and Essie."

It does not begin to express it to say that Tick was overwhelmed like a drowning man. Nor to say that he had lost his speech, which was never very ready under any circumstances. Nor to say that he felt full of a sensation both delightful and uncomfortable at the same time, which he had never experienced before. Truly his friends had remembered him most generously. Indeed, it seemed that all the world was his friend and he had no cause for a single regret. An overpowering sense took hold of him.

Looking around in a sort of helpless manner, like one begging for help or seeking a way of escape, he espied his mother. Then his tongue found utterance. He said:

"I believe you knew all about this, or you would not have said what you did a little while ago, that I had so much to be thankful for. Come, own up now—fair."

She laughed and said she did know.

"Well, I never dreamed of such a conspiracy before. I see no way out of it." He smiled a sort of dismal smile. The company assembled laughed at his awkward, helpless resignation to the force of circumstances that surrounded him.

"O, we've got you to-night, Tick, and you might as well give in gracefully," laughed "Dad" Holly.

"On with the sport; let fun be unconfin'd," parodied Jeff Primus in a sort of grim way peculiar to him.

"I guess I'm in for it," replied Tick, fully recognizing the situation.

"Of course you are—as tight as the minister's words can make you," cried "Dad" Holly.

"I think both of them yield gracefully," said Mr. Hale, coming to their relief.

There was a great deal more said of a like nature, in which Essie and Mrs. Hale figured very prettily.

It was one of the most pleasant episodes of the evening, when Hallie ran up to Essie and said in her naive way:

"Mamma said I should call you sister, and I want to hug you. That's the way sisters must do."

Essie clasped the sweet little thing to her heart and kissed her several times.

"And you must love me, too," added Hallie.

"I want to give you my present—a Christmas gift," and Hallie pressed an elegant diamond pin into Essie's hand. "Mamma said I should give it to you for a Christmas gift." "No, wait; let me," and the little fingers proceeded to pin it on the lace at Essie's throat, a throat remarkable for its pure whiteness. She fastened it there quite well. Everybody admired this beautiful gift, the thought of Mrs. Hale herself. It was, indeed, a proper and generous remembrance of the bride of the savior of her child.

At this time supper—a genuine wedding feast, a happy Christmas festal table—was announced.

"Boys, I hear the whistle for the station: twenty minutes—as many more as you want—for lunch," cried Jeff Primus. "Don't be in a hurry; you'll all be notified when the train leaves."

With "Dad" Holly on one side and Essie on the other, Tick was supported to the table. All the rest followed, in a hilarious mood, to the dining room, and amid the

clatter of knives and forks the merry jest and the happy laugh went round. Never before nor since, we venture to say at the risk of an unsuccessful contradiction, did a meal proceed with more mirth-provoking wit or life giving good humor. Jeff Primus led the way, and his infinite broad sallies kept the table in a continuous roar of laughter. Even the solemn-faced preacher caught the innocent spirit of merriment, and sometimes joined in the flashes of wit.

Mr. Hale declared with genuine frankness that he never enjoyed himself better in all his life. Mrs. Hale laughed till she said her sides hurt.

"Give that turkey wings—shoo at it—scare it, and let some more of it light on my empty plate. I can't imagine what went with the piece I had, unless Dad here gobbled it up," said Jeff Primus without cracking a smile.

"Isn't he a case," said Mrs. Hale in an undertone, yet loud enough for Hallie to hear.

"Mamma says you are a case," repeated Hallie to Jeff, bringing confusion to her mother's cheek. And yet she smiled at the simplicity of the little one.

"Yes, a packing case for groceries," he responded, smiling at Mrs. Hale's discomfiture. She never knew whether he was offended or flattered at her remark.

Toward the close of the rather hilarious meal Mrs. Hale expressed her unbounded admiration of Essie's elegant dress. We have purposely refrained from describing the beautiful gown of the lovely young bride, for the simple and only reason that the ladies can imagine what it was better than we can depict it. Suffice it to say, that in it she looked like a radiant princess. The sparkling diamond added so much to her classical beauty.

And again Jeff broke in with his farcical humor. It was funnier because Jeff said it than if anybody else had said the same thing. His sober face accompanying his jest was enough of itself to provoke unrestrained laughter.

"To the bride—a health to the bride," he said sedately, holding up a picked turkey bone like a wine goblet. Then he solemnly looked at the bone and continued: "I've never been to college, but I know how to divide turkey and bread. Been practicing that kind of long division for 'nigh goin' on these forty year', and with this experience I think I'm competent to toast the health of the bride and groom:

"Here's to the new family of Fabers whom we shall soon have for neighbors. The big ones and little ones—be jabbers!"

Everybody laughed—except Essie, who was busy talking to Mrs. Hale.

Tick said to Essie after all had gone away:

"The boys know how to entertain as well as give. This has been the happiest occasion of my life. We'll soon occupy our fine Christmas gift. In it we can never forget Mr. Hale."

"Nor Hallie and Mrs. Hale," added Essie, putting her hand to the rich gem at her throat.

## THE FOURTEENTH CENTURY.

BY MARIE LOUISE.

[Concluded.]

Much money was needed to keep that complicated governmental machinery moving. In England, and in all Europe for that matter, the Jews' property had in the past repeatedly been confiscated to the profit of the crown. But of late that source of supply had been nearly cut off. The Jews, made wise and crafty by bitter experience, found means, with the co-operation of the Lombards bankers, to issue bills of exchange and convert their wealth into paper instead of hoarding it and concealing it in caves to save it from the pirating king and lord. Nothing then was left the king to plunder but the church.

The dawning of the 14th century found monarchy in Europe strong, rebellious and full of chicanery, assisted by the cunning and the perfidy of the raising class of legists. By the side of monarchy stood the church, radiant of splendor, haughty, intoxicated with authority. Two giants met face to face; one entering virility, the other entering senility; the crown looking towards the east, the tiara towards the west.

Since 1274 England had been governed by a man of iron, Edward I. In 1285 another man of iron, one of those whom nature creates to work out revolutions, ascended the throne of France. He was Philip, the Handsome, just seventeen years old. The first act of the young king was to "exclude priests from the administration of justice, to prohibit their sitting in any court, not only in the king's parliament and in his domains but in those of the barons \* \* \* \* whatever priests may be filling offices," (in temporal jurisdiction,) "must be removed \* \* \* \* whoever may have any suit in the court, shall choose laymen for their solicitors." In 1291, the king enacted statutes against the land of mortmain held by the clergy, thus doing for France what Edward I was doing for England.

Philip the Handsome was the first king to convoke the three estates for the states-General. The burghers element now invested with national authority had transformed into the third estate and the political life of the communes and the burghers class disappeared. On April 10, 1302, the parliament sat for the first time, com-

posed of the nobles, the clergy and the commons or third estate. On that memorable day, the national era of France began.

In England, the parliament resolved itself into the three elements: Lords, clergy and commons, in 1339—thirty-seven years later than that of France. The same repugnance among the people for ecclesiastical jurisdiction in secular matters, prevailed throughout Europe, a general feeling grew against the encroachment of the church. The King of France, like the King of England, set to harassing the pope in order to get valid pretexts for confiscating church property. Alleging the war with England, he prohibited the exporting out of the kingdom of gold, silver, arms, etc. This struck Rome in the face. The pope, Boniface VIII, retaliated by sending bulls more arrogant than wise. Philip, whose ministers were bankers and legists, held the fulminating bulls in contempt. In the year 1300 the pope resolved to make a great demonstration of his absolute authority and of universal support of the people, called a grand jubilee at Rome. "The pilgrims," says Michelet, "were counted by the hundred thousand and counting soon became impossible. Neither the houses nor the churches could contain them, and they encamped on the streets and squares, under places of shelter hastily run up, under stretched cloths, tents and the arch of heaven. One would have thought that the end of time had come and that the human race had assembled before its judge in the valley of Jehosaphat \* \* \* \* In this jubilee, the pope showed himself in the midst of this multitude of every nation with the imperial insignia, with the sword and sceptre borne before him on the globe, and preceded by a herald crying: "Here are two swords, Peter, thou seest here thy successor, and you, O Christ! regard your vicar!"

Philip sent his chancellor to the pope with an answer to his bull. The interview was stormy and the difficulties were made more complicated than ever. The pope then summoned the French prelates to Rome for the 1st of the following November month. On that, Philip convoked the states general of April 10, 1302. By injecting that parliament with the commons, the king pitched the people against the pope. The result of the delirium was that the three orders separately sent a reply to the pontiff endorsing an edict of the king by which he forbade the prelates to repair to Rome. The Pope mortified and wrathful excommunicated Philip and released his subjects from their oath to him. The outcome of all that wrangling was that French soldiers were sent to Rome, the Pope was captured and imprisoned. Thus the crown

triumphed over the tiara.

The consolidation of monarchy as well as the great check given to the church were the result of the growing ascendancy of the burghess class. Corporate trade of the middle age reached its zenith with the triumph and power of the mechanical guilds in 1300. As the masters grew wealthy and opulent, the journeymen grew poor and degraded. The tyrannical restrictions of the guilds barred the opportunities to workingmen and begat the class called Proletariat. Driven to unendurable conditions, the journeymen sought to organize guilds of their own to protect themselves against the arbitrariness of the masters. Alas! this was the veritable fall of man! By organizing guilds of laborers against masters, the journeymen tacitly proclaimed themselves a caste and affirmed that capital and labor are two distinct factors, the property of two distinct classes and permitted capital to be placed above labor. They accomplished that which guild masters, above all things, must have desired. Had the journeymen known their economic rights, they had fought within the guilds and eliminated the authority of capital, for capital is the tool of labor and not the converse. Both factors belong to the same individual. That monumental mistake of the toiler in withdrawing from the hive when capital ruled and surrendering to dependency, has borne its malediction down to our present time and continues cursing and degrading the noblest of man's attributes: Labor.

Thus the 14th century ushered in the era of commerce, industry and political centralization. It dethroned the priest and the baron, and enthroned the legist and the financier. In the words of Michelet:

"Gold had dethroned God."

Now for the upbuilding of the Bourgeoisies and the replacing of mediæval feudalism by industrial and financial barons; now for the slavery that shall be the last, that of labor.

Connected with the church of the middle ages was the powerful and wealthy order of the templars. Kings and barons banded to raise pretexts of apparent validity to lay hands on the immense treasures of that fraternity. Charges horrible and improbable were brought against that noble order, the pride of the crusades of which they had been the most valiant soldiers. The templars' property was confiscated everywhere. In England in 1300, in France and the rest of Europe in 1312 and the grand master of the order, with several of his brothers were burnt in Paris in 1314. The new spirit sacrificed all to its hatred of the past, in the templars it scouted the crusades.

With the new era of legists and commerce, came taxation ruinous to all, the debasing of the currency and other corruption.

The toiling class suffered on all sides. The third estate exploited them remorselessly, the taxes ground them mercilessly. The minds of men saddened in the presence of so much misery, at the sight of cruel wars which involved nearly all Europe, and made of that continent a charnel house. Blood stained the soil and polluted the air; stricken humanity wept and shuddered.

Then appeared a new phenomenon. The wretched and starving peasants became restless as if impelled to move by some mysterious force. They massed in bodies and set roaming about the land, evidently actuated by no motive of violence. "Their leaders," says Michelet, "were a degraded priest and an apostate monk. They enticed along with them crowds of simple-minded persons even down to children who ran away from their homes. At first they begged and then they took. Some were arrested and thrown into prison, but their comrades broke into the prisons and released them."

These bands called Pastoureaux were the prototype of our present Coxey army. As a whole, it was a peaceful demonstration of a suffering people. They had not yet learned to turn against their despoilers, the seigniors. Yet thirty-seven years, and the Jacquerie will come out with a sharper outline.

On this well prepared ground, in 1339, burst out the black plague. Naturally it raged fiercest among the poorer classes. It destroyed, according to records, one third of the human race. When this furious storm departed it left the social atmosphere purged of many injurious elements.

A few years later Wickliffe appeared and gave to the world his gospel of justice and equality, and his fearless denunciations of the errors of Rome. Around him disciples of the new gospel rose everywhere. As early as 1357 the peasants in France broke out in rebellion and devastated the northwest, destroying barons and manor houses. This great peasant war, called the *jacquerie*, was the first recorded in our civilization, the first since the great uprising of Spartacus, 73 B. C. Simultaneously with the *jacquerie* the first insurrection of the people against the government broke out in Paris. King John and his barons had been taken prisoners by the English at the battle of Poitiers, and the kingdom was left without a ruler, save the dauphin, who was then but a boy. The people were reduced to abject poverty. Paris undertook for the first time what she did many times since, viz.: to govern France. In Paris the provost of the merchants, Etienne Marcel, took the lead and convoked the states general. Here the bourgeoisie attempted to rule, and used the common people to do the work of the revolution. The ordinances decreed by the

states general, which the dauphin was compelled to sign, were, for that time, most radical. Says Michelet: "The great ordinance of 1357 was much more than a reform. It effected a sudden change of government. It placed the administrative power in the hands of the states (three estates) and substituted a republic for the monarchy."

The revolution of 1357 was the presentation in miniature of the great overturning of 1789. It was the outline which it took 500 years to finish. Already loomed in the horizon the faint picture of the scaffold on which Louis XVI died, and with him the principles of monarchy. An occurrence in the revolution of 1789 strangely coincides with that of 1357. Marcel and his followers wore red and blue hoods, the colors of the city of Paris. He invaded the royal palace and placed his democratic hood on the head of the dauphin and put the royal cap on his own head. On June 20, 1792, the populace broke in the Tuilleries, handed a red liberty cap to the king who placed it on his head, and, says Carlyle, "forgot it there."

From France the fever of insurrection passed into England. Two priests, disciples of Wickliffe—John Ball and Jack Straw—stirred the minds of the bondmen by preaching to them the doctrines of liberty and equality. Soon, 1381, the great insurrection of Wat Tyler spread terror among nobles and princes. The rebels were shamefully betrayed by the king, a youth of fifteen, who tore from them the charters he had given and massacred them wholesale. But liberty, though slain, was not dead. The toilers of the fields and those of the cities had, at last, discovered that they were naked and the name of he who plundered them—the master. Religion was no longer capable of keeping them in humble obedience. The schism in the church, 1378, whereby two popes, one at Rome, the other at Avignon, (France), held the same sceptre at the same time and braved and excommunicated each other, broke the last support of papal infallibility.

The 14th century is the turning point from religious and feudal despotism to political, industrial and financial despotism. The labor question which holds so large a place in our time was born in the 14th century along with the third estate or bourgeoisie, and the monarchy of divine right. Since then, the bourgeoisie and the toiling class have united to destroy pure monarchy and succeeded 1792. Yet though the church be subdued and monarchy be limited, the poor are starving and the rulers are oppressing in our time just as they did in the middle age. Liberty is still to be won by the common people, but tyranny has become clarified and condensed. It is lodged in one body: the bourgeoisie.

# MECHANICAL.

## PROMOTION AND SENIORITY.

Some officials take especial delight in scoffing at rules adopted on some roads whereby firemen are promoted to engineers according to seniority instead of merit. That this is an unwise rule may be true, but subordinate railway officials are responsible for the adoption of this rule. There can be no difference of opinion as to the length of service of a fireman if records are properly kept, but when merit is only detected in kinsfolk and tattlers merit ceases to be a virtue. When brothers, cousins and nephews can commence firing a switch engine for a man of three years' experience and eighteen months later have this same experienced man to help them over the road in the capacity of fireman there is a screw loose somewhere and investigation will hardly locate the loose screw in the experienced man's head. It is a well known fact that in many localities if a petty official takes a dislike to a fireman merit will never bring about his promotion. This state of affairs has made "seniority" promotion popular. The partiality of subordinate officials in magnifying merits and concealing demerits of relatives in their employment has caused some railway companies to establish rules prohibiting the employment of kinsmen by foremen and superintendents of departments. If a just and equitable competitive examination should decide promotions of firemen lodge rooms would blossom into school rooms and seniority promotion would have but few admirers. That firemen possess greater merit than is usually recognized is exemplified by a discussion which took place at the recent convention of Traveling Engineers, held at Denver, Colorado. One gentleman made the following statement:

I want to state an occurrence that happened in the air brake instruction car the other day at Chicago. I had seven engineers in there, and one fireman asked if he could come in and listen. I said, "Certainly." I had instructed all those engineers and then was asking them to trace the air through the chart I had on the side of the car, and there was not one that could commence to do it. After I had instructed them, I am sorry to say, they couldn't do it. This young man, this fireman, said: "I would like to do

that." He got up there and traced the air through better than I could. I believe; that is, he could name every part and number better than I could. There was nothing when he got through that I could tell him. Others possibly could have told him, but I never saw a man in a car in my life that could trace the air through and explain the air brakes better than that fireman. It was not three months after that when I had him on a locomotive, and he is running to-day and giving good satisfaction, and he learned it himself.

This statement would indicate two things:

(1) Firemen are required to know more than engineers before they are eligible to promotion; (2) this young man's merit would have remained undiscovered had he not asked an opportunity to prove himself.

## RAILROAD SUPERINTENDENTS.

On October 15th the American Society of Railroad Superintendents met in New York City in their annual session. In addition to their regular order of business, the following topics were discussed:

Is there sufficient reason for discontinuing the use of white or clear lights as a safety signal in American railway practice? If so, what color can be substituted to mean "safety," and what to mean "caution?"

What principles are to be recommended for fixed signals, especially for block signals and inter-locking, that will promote uniformity in installation, simplicity in operation and clearness in signaling?

Is the use of derailing switches in terminal yards to be recommended?

What principles and methods have been found, in your experience, most effective, in order to obtain trained, reliable employees in the operating department?

"Standard Rules" of train service were up for discussion, but no report of definite action taken on any topic has reached this office.

## THE TRAVELING ENGINEERS.

At the second annual convention of the Traveling Engineers' Association, held at Denver, Colorado, the question of amount of knowledge of mechanics necessary for a fireman to have before promotion came in for general discussion. It is evident that the standard in the future will be higher than in the past; in fact, men to be promoted must exhibit a higher education upon the subject of air brakes, valve mo-

tion, etc., than is possessed by the average "old timer." It was also the general opinion of the association that new engineers should know the road thoroughly before going out with a train equipped with air brakes. In this issue is published the examination questions on machinery reported by the committee and adopted by the convention. In the MAGAZINE for January questions on air brakes will be published.

#### KNOWLEDGE IS POWER.

Under the caption, "The Steam Engine Indicator and Its Work," Mr. Thos. Pray, Jr., has in this issue of the MAGAZINE presented to the readers of the "Mechanical Department" an introduction to a series of articles which will appear with the new year upon the subject of steam engine indicators. Perhaps it is not too much to predict that these articles will be read eagerly by those who have ambition to keep up with the procession in mechanical matters. The author's experience with the instrument and its work is wide, and he ranks high as authority upon the subject—much of his work having been done on marine engines on both our merchant and war vessels.

This article will be illustrated and will form a part of an educational course decided upon for the coming year. The engineer of the future will be a man that has a knowledge of his business, and if the firemen of to-day will read the "Mechanical Department" of the MAGAZINE for 1895 they will have that knowledge.

#### SUPERINTENDENTS OF BRIDGES AND BUILDINGS.

The American International Association of Superintendents of Bridges and Buildings held its annual meeting at Kansas City, Mo., on October 16th to 19th, President J. E. Wallace (Wabash), Springfield, Ill., in the chair.

After three days meeting the association adjourned, electing the following officers, and agreeing upon the following subjects, which are to be considered by special committees to be reported upon and considered at the next annual meeting to be held at Atlanta, Ga., on the third Thursday of October, 1895.

President, George W. Andrews, Baltimore & Ohio R. R., Philadelphia, Pa.

First Vice President, W. A. McGonagle, Duluth & Iron Range, Two Harbors, Minn.

Second Vice President, L. K. Spafford, Kansas City, Fort Scott & Memphis, Kansas City, Mo.

Third Vice President, James Standard, Wabash, Moberly, Mo.

Fourth Vice President, Walter G. Berg, Lehigh Valley, Jersey City, N. J.

Secretary, S. F. Patterson, Concord & Montreal R. R., Concord, N. H.

Treasurer, George U. Reid, Lake Shore & Michigan Southern, Cleveland, Ohio.

Executive Committee—James Standard, Wabash, Moberly, Mo.; James H. Travis, Illinois Central, Chicago, Ill.; Joseph H. Cummin, Long Island R. R., Long Island City, N. Y.; R. M. Peck, Missouri Pacific, Pacific, Mo.; I. L. White, Texas Midland, Terrell, Tex.; A. Shane, Cleveland, Cincinnati, Columbus & St. Louis, Lafayette, Ind.

#### SUBJECTS FOR CONSIDERATION.

First. Mechanical action and resultant effects of motive power at high speed on bridges.

Second. Methods and special appliances for building temporary trestles over wash-outs and burnouts.

Third. Strength of various kinds of timber used in trestles and bridges, especially with reference to southern yellow pine, white pine, fir and oak.

Fourth. Best method of erecting plate girder bridges.

Fifth. Best and most economical railroad pile driver.

Sixth. Sand dryers, elevators and method of supplying sand to engines, including buildings.

Seventh. Span limits for different classes of iron bridges and comparative merits of plate girder and lattice bridges for spans from fifty to one hundred and ten feet.

Eighth. Best method of spanning openings too large for box culverts, and in embankments too low for arch culverts.

Ninth. Best end constructions for trestles and adjoining embankments.

Ten. Interlocking signals.

Eleven. Pumps and boilers.

## TELEGRAPHIC PROGRESS IN RECENT YEARS.

The statistical abstract recently issued by the Board of Trade gives information regarding the growth of telegraphic communication in the principal European countries and in the United States during the last twenty-five years. It appears from the data given that Germany was the first country in which a telegraph line was opened, in 1833. It is well known that in this country the first successful essay of a practical electric telegraph was made on July 25th, 1837, by Cooke and Wheatstone, between Euston and Camden, on the London and North-Western Railway, and that the first telegraph line was set up in 1838 on the Great Western Railway, from Paddington to West Drayton. The United States followed in 1844, and then came in order of introduction Belgium, Austria, Italy, France, Holland, Switzerland, Sweden, Denmark, Norway and Spain, in the last of which countries the first line was opened only on May 1, 1885. No data are given for Russia, and the statistics for that country come to an end with 1880, Russia being then fifth on the list of countries as regards the number of messages carried. The smallest number of messages despatched in 1870, the first year selected, was 466,700, in Norway, and the largest number, 9,350,000, in Great Britain. Germany was third in the list with 8,207,800 messages. The United States had a slightly smaller number of messages to its credit than Great Britain, the total being 9,157,646. In 1892, after the lapse of twenty-two years, Norway had still the smallest number of messages carried—viz., 1,649,544. Germany seems to have dropped from third place to fourth, with a total of 31,175,100. No figures are given for France in 1892, but in 1891 the number of messages carried was 32,397,000. The United Kingdom still retains the first place, its total in 1892 being 69,908,600, compared with 62,387,298 in the United States. Austria held fifth place in that year with 10,835,302, and Italy seventh with 8,322,925. Regarding the proportion between the number of messages carried and the population as a whole, it appears that in 1870 Russia showed the smallest proportion of messages carried per head,

only 0.04 per head of population. Of the five countries which held the next lowest rank to Russia as regards the proportion of telegrams to population—viz., France, Italy, Sweden, Spain, and Hungary, the first named has since made the greatest stride, and is now amongst the first five countries compared in this respect, increasing from 0.1 to 0.9. Switzerland, in 1870, was first among the countries, with 0.6 message per head. In the interval its proportion has been doubled, but it now holds only second place, the United Kingdom being first, with 1.8 message per head. The United States, with Holland and Belgium, fall into third place, having 0.9 message per head.—*Engineers and Firemen's Journal (Leeds, England.)*

## THE STEAM ENGINE INDICATOR AND ITS WORK.

BY THOMAS PRAY, JR.

It is not many years since this instrument was considered an ornament, or perhaps a scientific plaything, which only men familiar with mathematics could understand. It has, however, become familiar to a large portion of the engineers, firemen and others intimately connected with steam and its workings and the steam engine.

It is not my purpose to tell of any one instrument in particular, either favorably or unfavorably, but a word of caution may be added with justice to all, that within the last few years and especially since the expiration of the patents in two cases, a number of so-called improvements or "improved instruments" have been put upon the market which are almost worthless, so far as reliability or accuracy is considered.

It does not necessarily follow that all cheap instruments are bad, or that all high priced instruments should be accurate. I am sorry to say, however, that this does apply to steam engine indicators in a very general way to-day.

The difficulties of making an accurate instrument are not realized, nor is the result of accuracy appreciated, even by the makers of the instruments themselves, or the users of them.

It is true of the three leading instruments to-day that they have required so much expenditure in their manufacture and in attempts to perfect them, that they have hardly been profitable unless to the patentee.

A great deal of doubt exists as to the reliability of the indicator diagram and the results that are computed from it even to-day. But there is a practical result realized and a benefit from the use and

study of the indicator, and the work involved which will benefit any man who makes himself familiar with it.

The lines of the indicator when properly applied teach us precisely what is going on inside the cylinder, how the steam is admitted, when and where it is cut off, whether the cut off is efficient or not, whether expansion is complete and whether the steam drifts in after we suppose the valve has closed. It shows whether the release commenced early or late, and whether the escape of the steam into the condenser or air, as the case may be, is complete, or whether back pressure exists, to what extent, and in what part of the stroke. It also shows whether compression, little or much, exists, and how the steam valve opens with relation to the dead center of the crank.

It does not show how much water there is in the steam, and it does not show the amount of clearance, it does not show the value of the steam. It does, however, contain positive information, which when we associate it with the proper facts and data, and then compute it correctly, gives a vast amount of information which can be obtained in no other way with any certainty.

It is becoming an invaluable adjunct to any steam engine, or other machinery where steam is used to overcome resistance or to do work.

To any person familiar with the action of the steam engine an indicator diagram becomes simple with a little study. It will be my purpose to write on the lines of an indicator diagram, without any attempt to use impossibilities, or improbable features, and after these have been explained to use locomotive diagrams from a locomotive under different circumstances and conditions, in such a way that those who feel disposed can get information from them, with the hope that they may appreciate them as they will undoubtedly if studied.

No mathematical formula of any kind will be used except so far as is necessary to establish the rules to work from, and in every case these will be explained simply but correctly, so that any one who will shall have the full benefit of any application they may choose to make.

The indicator is as applicable to gas, to hot air, to cold air, to compressed air, and to various other uses where a graphic figure is required, and it has been used for many such purposes within very recent years.

The indicator is liable to serious mistakes only when misused, or, I regret to say, whenever there is some personal interest in the results. But these things are not to be discussed, they bear to a certain extent some discredit on the instrument. We will consider it only in its proper and judicious

use. It has paved the way for the vast improvement which has been made in the working of steam, in all cases from its record, and the computation of that record positive information, reliable information, has been given by it.

Following the suggestions of the instrument we have been able to greatly increase the pressures, and introduce changes which have resulted in doing very much more with a pound of coal, and this is the basis of all economy.

Without the indicator high speed and high pressures would never have made the start they have within the last ten or twelve years. It was only done by obtaining accurate information of what had been done and then improving upon that.

This is the history of all the valuable improvements. Step by step, following the record and improving upon it, and this is precisely what the readers of the MAGAZINE desire to do, and very many of them are doing so.

This plan has been under consideration for some time, and as the new year is a good time to commence it, the purpose is to have a number of articles on the same subject, connected but still not in any sense continued. Each article will be independent of the other except in a relative sense. Each will be complete in itself and will not be in any sense a "continued story."

With the wish that all the readers of the FIREMEN'S MAGAZINE will interest themselves in the pursuit of knowledge which will be valuable to them, each and every one of them who makes it a subject to be mastered, and that the study of what goes on with the steam which is made, and whether that use is economical or otherwise, and that the year shall bring to each one something of profit and of pleasure in his connection, I will close this article.

#### TECHNICS.

At Pelzer, S. C., a manufacturing plant has closed a contract for hydraulic and electric apparatus for the transmission of 2,000 horse power a distance of four miles.

England, after successfully operating the telegraph service in connection with the postoffice department, has about concluded negotiations by which all telephone lines will also be operated by the government.

An inventive genius has designed an ether condensing engine to propel bicycles at high rates of speed. A vertical cylinder is placed beneath the seat within which is a coil of pipe covered with asbestos. The liquid contained therein is heated by a spray of ignited gasoline, and the gas generated is automatically introduced into two indirect acting cylinders connected with

crank pins on shaft of rear wheel. Leading from the exhaust to the ether reservoir is a condenser which condenses the vapor back to liquid

"Izal," a new and powerful disinfectant, has been discovered by J. H. Worrall, an English chemist. It is a coal product, intermediate in its general properties between benzine and paraffine. Though insoluble in water, the particles when finely divided remain permanently suspended in water, forming an emulsion.

At the foot of Willett's Point, L. I., a twelve-inch gun has been wrapped with thirteen miles of one-half inch insulated telegraph cable. This coil and a dynamo forms the strongest magnet in the world. Col. W. R. King, of the United States Engineering Corps, contrived this monster magnet while experimenting, and claims that it will derange a ship's compass at a distance of six miles.

An inventive genius has brought forth a clay lamp wick that, it is claimed, is indestructable, needing no trimming or other care, and produces 25 per cent. more light than wicks of cotton. Vegetable fiber is mixed with plastic clay which is burned out while the clay is being baked, thus leaving minute passages or capillary tubes through which the oil feeds. Edison's incandescents will probably prevent a great fortune being made in clay wicks.

The Kinetoscope Exhibition Company has offered \$50,000 to the pugilists, Corbett and Fitzsimmons if their contest for the championship of the world will take place under their supervision where interference would be improbable and surrounding conditions favorable to photography, such as bright, clear weather, etc. The kinetoscope people then propose to exhibit the event with the assistance of Edison's great invention, and it is claimed that each and every movement will be perfectly reproduced.

The pressure of ignited gunpowder being about forty tons per square inch, says the *Electrical Worker*, the energy in a bullet fired from a small pistol is about 600 foot pounds. As a pocket watch consumes about one fifty-four millionth of a horse power, it follows that the amount of energy in the bullet would run the watch almost two years. As the current in an Edison telephone transmitter was found to be about .0001 ampere, and its resistance about one ohm, the energy in it is slightly less than one-thousandth part of that used in a watch, and it would therefore be run over 2,000 years with this same amount of energy as developed in a small pistol.

The American revolver, which so long has held prestige as a firearm will, it is feared, have to yield to the Borshardt automatic repeating pistol, manufactured by Lowe, a Berlin gunmaker. This new firearm has excited the admiration of an American military expert who has recently given it a thorough test. The cocking, ejecting shells and reloading are all performed automatically by the recoil of the barrel and breach mechanism. One pistol was fired 6,000 times without any apparent injury. The eight cartridges held in the magazine can be fired in two seconds, and the recoil is imperceptible. Another peculiarity is that the "gun" doesn't resemble an American pistol in the least.

The *Tradesman* says paper is one of the most lavishly used articles of modern times. The materials of which it can be made are almost as numerous and common as the uses to which the finished article is put. There are something over 2,000 patents covering the making of paper. It may be manufactured, under some one of them, from the leaves of trees; from hop plants, bean stalks, pea vines; from the trunks and stems of Indian corn and every variety of grain, from moss, clover and timothy hay, and more than one hundred kinds of grasses; from straw and cocoanut fiber; from fresh water weeds and sea weeds; from saw dust, shavings and asbestos; from thistles and thistle down; from banana skins, tobacco stalks and tan bark; from hair, wood, fur, old sacking or bagging, and from almost any other imaginable refuse.

There is a difference of opinion regarding the serviceableness of a ship's boat constructed of aluminum. Recent tests by experts of the navy department indicate that the new metal is extremely susceptible to the corrosive action of seawater, and just as liable to have barnacles adhere to it as other metals. But Mr. Charles S. Rossiter, of Baltimore, who built three aluminum boats for the Wellman Arctic expedition, does not agree with the statement of the navy expert. His boats went through rough usage and hard service and have returned in first class condition. The war department is experimenting with the metal with a view to putting it into general use in equipments for soldiers. Buttons, belt buckles, canteens, bayonet scabbards, cups, stirrups, horseshoes, bits, etc., will soon be of aluminum, thereby reducing the weight of these articles more than 50 per cent.

#### NOTICE TO MEMBERS.

When corresponding with Grand Lodge always mention number of lodge of which you are a member.

**Explosion of Hollow Pistons.**

The fact, though an infrequent one, that hollow pistons, on being heated for removal from the rod, have unexpectedly exploded, has been the subject of special investigation in France, says the *Tradesman*. The fact appearing that, during the last twenty years, five such explosions have occurred in French workshops, in the reheating of these hollow, cast iron pistons. It appears from the statement made in this connection, that, on examining into the interior of a piston which had been in use some eleven years, there was exhibited a brown substance which contained fatty matter, oxide of iron, peroxide of iron and carbon; and, this being the case, it was supposed that a certain quantity of water had been forced into the cavity in service, either through the iron or through some imperfection in the plugs with which the original core support cavities were filled. The water, in forming oxide of iron, sets free its hydrogen, which filled the piston cavity, and, as the recombination of this hydrogen with the oxygen at a low red heat, would have the effect of producing an explosion of the character in question, the suggestion is put forth by the experts having this examination in charge that such a result may be prevented by tapping before reheated.

**QUESTIONS ON MACHINERY.**

Adopted by the Travelling Engineer's Association for Examination of Firemen for Promotion.

1. What is a locomotive?
2. What are your first duties when going out of the house with the engine?
3. What tools do you consider necessary?
4. What supplies?
5. How do you locate a pound in an engine?
6. If pound is in rods can you always locate it?
- How?
7. How would you commence to key up a Mogul or ten-wheel engine?
8. If pound is in the wedges can you set them up and get them right the first trial?
9. How do you do this?
10. Will an engine pound if pedestal bolts are loose? Why?
11. When wedge bolts are broken, how do you keep the wedge in position?
12. If follower bolts are loose will it make a pound?
13. How do you detect this trouble?
14. How do you remedy it?
15. If cylinder packing is blowing through how do you tell which side it is on?
16. Will steam come out of both cylinder cocks at the same time on the same side?
17. If valve is cut and blowing can you locate the trouble?
18. And which side it is on?
19. Will steam come into cylinder if valve is tight and stands in the middle of its travel; that is, covering both steam ports?
20. Can you locate the trouble if steam pipe is leaking? How?
21. If exhaust gets out of square on the trip what does it indicate?
22. Can you locate the trouble, whether it is a slipped eccentric, loose bolts in the strap, eccentric rod loose on the strap, or broken valve yoke? How?
23. Is there anything else not mentioned that would effect the sound of exhaust?

24. Can you set a slipped eccentric? How?
25. How do you tell which one has slipped?
26. How are they kept in their places on the axle?
27. How do you get the engine on the exact center?
28. Which center is most convenient to set eccentric from?
29. Where do the eccentrics come in relation to the crank pin on that side of the engine?
30. Where do they come in relation to the eccentrics for the same motion on the other side of the engine?
31. What generally causes eccentrics to slip?
32. How do you move the eccentric back to its proper place on the axle?
33. Would you put water on a very hot eccentric or strap?
34. Are all eccentrics made in one piece?
35. What do you disconnect, take off and block up in case of a broken eccentric or strap?
36. Can an engine be worked ahead to a station with a full train, if back motion strap is broken? What should be done in this case?
37. What would you do if link hanger or pin is broken?
38. If arm is broken off tumbling shaft?
39. With a broken reach-rod?
40. With a broken link block pin?
41. With a broken piston gland or stud?
42. What would you do with an engine with a broken piston?
43. With a broken cylinder head?
44. With a broken valve yoke?
45. With broken valve seat?
46. With broken valve stem gland?
47. When a valve seat breaks does it ever do any damage to other parts of the engine?
48. What would you do with top rocker arm broken?
49. How do you fix broken steam chest, if steam leaks out badly?
50. How do keep steam from coming out of dry pipe into broken steam chest on the different builds of engines on this road?
51. How and when and where do you block the crosshead when disconnected?
52. How do you keep the packing rings out of the counter-bore?
53. Would you take out the cylinder cock at the end the piston is in?
54. What would you do if main rod strap or crosshead should break?
55. What is done if side-rod or back pin breaks?
56. Can all four-wheel switch engines be run with the side rods down?
57. Why do you take rods down on the opposite side to that broken?
58. What is the effect of sanding the rail while engine is slipping, without first shutting off steam?
59. Is it good policy to allow sand to run from one pipe only?
60. How do you block up an engine for a broken driving spring or hanger?
61. With broken equalizer?
62. With broken engine truck, spring or hanger?
63. With broken intermediate equalizer on Mogul?
64. With broken engine truck center-pin on Mogul, what is to be done?
65. What do you do when a tire breaks and comes off the wheel on standard engine?
66. With front tire on Mogul or ten-wheel engine?
67. Main tire on Mogul?
68. With the back tire on Mogul?
69. With both back tires on Mogul?
70. With the back tire, back driver or back axles broken off, how do you fix engine so you can back around curves, when necessary?
71. At what points is weight of engine carried when springs and equalizers are in good order?
72. Where is the weight carried when blocked up over the forward driving box?
73. When blocked up over the back driving box?
74. What is the best material to use to block between driving box and frame?
75. If driving box or brass breaks so it is cutting the axle badly, what can you do to relieve it?
76. Do you consider it an engineer's duty to have suitable hardwood blocks on his engine to use in

case of a break-down?

77. How do you block up or get to a sidetrack with broken engine truck wheel or axle?

78. With Mogul; with broken engine truck wheel or axle, what would you do?

79. With broken tender truck wheel or axle, what would you do?

80. Is it necessary to take down the main rod if frame is broken between the cylinder and main driving box on standard engine?

81. Would you take down either rod if frame is broken between forward and back driving boxes?

82. Where is the frame fastened solid to the other part of engine?

83. Would you disconnect an engine for a broken guide?

84. How do you handle an engine if throttle sticks open, or dry pipe joint breaks so steam cannot be shut off from engine?

85. What will you do if throttle is disconnected and remains shut?

86. If crank-pin brass gets hot so the babbit melts, would you cool it off with water before all the babbit comes out?

87. Can you take out a tender truck brass and replace it with a new one? How?

88. An engine truck brass?

89. When brass does not wear an even thickness at both ends, is it apt to run hot? Why?

90. How often do you examine the ash pan, grates and dampers?

91. What are your duties after cutting off from train at the end of trip?

92. What are your duties in case of wreck when your engine is off the track?

93. If front end is broken, but flues and steam pipes in good order, how could you make repairs on it to run in?

94. Do you understand the principle on which an injector works?

95. What are the different builds of injectors on this road?

96. What is the combining tube?

97. If sand or dirt gets in the passage this tube works or moves in, will the injector work?

98. In case an injector will not work when it has always been reliable before, where would you look for the trouble in the first place?

99. If it will not prime at all?

100. If it primes good, and breaks when opened wide, where would you expect to find the trouble?

101. When boiler check sticks up or leaks back so water comes from the boiler, how do you remedy it?

102. Is there more than one check valve between the injector and boiler?

103. Will an injector work unless all the steam is condensed by the supply of water?

104. Will it sometimes work better if steam throttle on boiler is shut off so as to supply only steam enough to work the injector?

105. Will an engine steam any better if this is done?

106. How should an engine be pumped—continuously from beginning to end of trip, or would you shut the injector off when pulling out after each stop?

107. Will an injector take water from the tank if the air cannot get into the tank as fast as the water goes out?

108. Is there any advantage in having the boiler moderately full when pulling out of a station, or when starting a hard pull for a hill?

109. What makes a boiler foam?

110. How do you remedy it?

111. What is the danger when boiler foams badly?

112. Does water remain at the same level when the throttle is shut off?

113. What do you do in case the water drops too low?

114. What is the least depth of water on the crown sheet that is safe?

115. How much water on the crown sheet with one, two and three gauges of water respectively?

116. Do you consider it safe to run an engine with one or more of the gauge cocks stopped up?

117. Is the water glass safe to run by if the water

line in the glass is not moving up and down when the engine is in motion?

118. Under what circumstances can it be used to show height of water if you cannot see the top line of water in glass?

119. If gauge cocks are stopped up, or the water glass cock filled up so water does not come into glass freely, what is your duty?

120. Is any more water used when an engine foams than when water carries well?

121. What is the effect of using black oil in the boiler and through the injectors?

122. Would you use valve oil or lard oil for the same purpose?

123. What damage does it do to an engine to work water through the cylinders?

124. Is it a good plan to let an engine slip at such times?

125. Is it liable to break the cylinder packing rings or cylinder heads?

126. In case you get out of water on the road, what would you do?

127. When an engine dies on the road in the winter, what will you do?

128. How will you fill the boiler with water and get the engine alive, when fire is drawn on account of low water?

129. Can an engine be pumped by towing her with another engine? How?

130. Can she be filled up with hot water from a live engine, if you have a hose and suitable connections?

131. How do you take care of a boiler with old and tender or leaky flues?

132. If the top of stack is covered after the fire is cleaned and engine is in the house, to keep cold air from drawing in and up through flues, will it help to keep them tight?

133. Are you familiar with the workings of the lubricator?

134. Explain how the oil gets from the cup to steam chest and cylinders?

135. What about the small check valves over sight feed glasses—what are they for?

136. Are there any other valves between lubricator and steam chest? Why not?

137. After filling the oil cup what valve do you open first? Why?

138. If you should fill the cup with cold oil while in the house, would you open the water valve or leave it closed?

139. How often should lubricator be cleaned out? Why? How?

140. Should sight feed glass or feed valve on one side become broken or inoperative, can the sight feed on the other side be used?

141. Will any of the lubricators in service "cross-feed," that is, feed to the cylinder on the opposite side of engine? Why, or why not?

142. Explain the "cross feeding" difficulty as experienced in some of the "lubricators" in service.

143. Is there a possibility of losing all the oil out of "lubricator" after shutting off both bottom feeds to steam chest, when engine is allowed to cool down?

The foregoing questions are intended as a guide for Examiner, or Examining Board to be governed by. Candidates should be asked questions all around the regular ones as laid down in this list, to find out what the candidate knows.

#### A Nut for Correspondents.

Recently an engineer on the Vandalia railway was suspended for incompetency under the following conditions: "Six miles before reaching the end of his run his engine became disabled on main line. Another engine was sent out and towed him in. *He did not disconnect his engine, but oiled valves and cylinders. No damage was done to valve seats or cylinders, all being thoroughly lubricated.*" Comments are invited.

## CORRESPONDENCE.

#### Some Difficulties in Engine Cleaning.

MR. EDITOR:—You see and hear a great deal about firemen keeping clean engines. Some times and at some places this can be done with pleasure and profit, but let me tell you how encouraging it is here on the St. L. & S. F. R. R. It means twenty hours on freight to make a 100 mile trip, and after this the fireman shows up to clean his engine and draw his supplies. He has to go over the jacket about twice with the broom before he can use waste, because the clinker men and the ash pan cleaners do not use the blower. Then he has to wash his windows and wipe out the cab, inside and out, polish his boiler head, scour his brass, fill his lamps, oil cans and lubricators, and otherwise put in six to eight hours, for which he receives nothing. He goes home believing that he has done his whole duty and the old mill looks as good as any of them. The next morning he comes around to go out and see how his work is appreciated. The cab brass, windows and paint work are smoked so that you can write your name anywhere. The man who fired up has left the door open. The hostler has taken her out and has done it so artistically that she looks as though a flock of black-birds had roosted over her. Then he took her to the coal chute and filled her tank, forgetting to drop the curtain. This helped the chance to write your name in bold relief through the dirt. The tank is full of coal about the size of a large wash tub. The water bucket is gone. The night men have emptied some of the oil cans. Your new shovel has been exchanged for an old one. A window glass broken and perhaps the broom gone.

While you are standing up to your knees in dirt and disgust, wondering whether it would be best to kill some one or commit suicide, along comes a man of authority and wants to know "Why you can't keep that engine looking decent?" This is no imaginary picture, it is our regular daily ration. Ask any St. L. & S. F. R. R. fireman. "X."

MR. EDITOR:—I was going to put my light, the indicator, under a bushel basket and quit, but upon considering the matter I have changed my mind, and instead, I put on my overalls and jumper, and prepare to meet the enemy.

In Forney's Catechism of the Locomotive, question 122, we find: "What is meant by the clearance of a piston and cylinder?"

Answer. "When the piston of an engine is

at the end of its stroke there is always some space left between it and the cylinder head so that there will be no danger of the one striking the other." This is "piston clearance," undoubtedly, undeniably, irrefutably piston clearance. "The distance between the piston and cylinder head at the end of the stroke is called 'clearance.'" Besides this space, the passages between the valve face and the cylinder must also be filled with steam before the piston begins its stroke. The whole of the spaces between the piston and valve space is called 'clearance space.'" Not at all, this is "clearance."

There was never anything more misleading than this "opinion." I would like to ask Mr. Forney how he lays out the theoretical curve without laying out on the diagram the clearance line?

By the way, Mr. Garaghty, a couple or three cans of those Baltimore oysters would not go bad, and Mr. Weiler, a few of those New Jersey clams would be fine.

Forney broke his "pick" with me when he came out in his new edition and lays out the theoretical curve from the steam line where it will intersect the vacuum line.

Arthur L. Parshall.

ALBUQUERQUE, N. M., Nov. 10, 1894.

#### A Simple Question.

MR. EDITOR:—I notice that there are a great many engineers that do not understand where the piston gets the air from that is pumped in the steam chest when the engine is running with the reverse bar in reverse position. I have had old experienced engineers to tell me that the piston pumped air through the cylinder cocks, and they went on to say if the cylinder cocks were shut up tight so that no air could get through them the engine would not hold.

I wish some of the writers of the MAGAZINE would explain this simple question, for the benefit of the ignorant, in the January MAGAZINE. I am only a "smoke jack," and on this road a fireman must keep in his "proper place."

W. D. R.

#### Wire-Drawn Steam.

MR. EDITOR:—If a partly closed throttle valve is wasteful of power because it produces "wire-drawn" steam, does not working an engine with short cut-off produce the same results at the slide valve? Authorities rule that the throttle valve should be kept wide open and speed regulated by cut-off. Is it not a fact that all steam is wire-drawn when used economically; that is, when an engine is not allowed to develop full power? It would appear to a student that the advantage gained in "authorities" methods is in expansion alone and not because steam is less wire-drawn. Will some of our correspondents enlighten a

Student?

## WOMAN'S DEPARTMENT.

EDITED BY IDA A. HARPER..

Letters for publication should be directed to Mrs. Ida A. Harper, Stanford University, California.

### A FAREWELL.

I often have wondered when and how I should say "good bye" to the readers of THE FIREMEN'S MAGAZINE. The "when" is now. The "how," ah, that is not so easy to define! I say "of the MAGAZINE," because, during these many years I have had numerous pleasant reminders that the gentlemen, also, have been faithful and appreciative readers of the "Woman's Department." I trust that the many subjects discussed in these columns have possessed some interest for both men and women. Modern existence has brought them into such close association in all the different departments of life that—most of the vital questions of the day—are of equal importance to both, and we can no longer draw a clear line dividing the interests of one from those of the other.

If I should fill this department two months longer, twelve consecutive years of service would be completed. This is a long time to write for the same constituency of readers, if I may so express it. They are entitled to a change and, doubtless, will enjoy it; but I flatter myself with the hope that, with my readers, as with myself, there may be some regrets at the separation. I have watched, with much pride, the growth of the MAGAZINE from an obscure and struggling little periodical to one of the most influential labor publications of the day. I give the full credit of this success, as every honest man and woman must, to the commanding ability of our editor, Eugene V. Debs. I rejoice to have this opportunity of expressing my high appreciation of his fine executive force and his splendid mental powers. I believe they will be recognized even more fully in the future than they have been in the past. Those who have the pleasure of his personal acquaintance will testify also to his sterling honesty of purpose, his fidelity to his convictions and his dauntless courage in carrying out what he undertakes. In a friendship of fifteen years I have found him always the same, a man tender hearted, generous, brave, just and faithful, in the highest interpretation of all these beautiful qualities. I esteem it a privilege to be able to declare, even in this most inadequate manner, my sincere regard for our retiring editor-in-chief.

I beg my readers to believe that my work in this department has been done from other motives besides the financial recom-

pense. I have been glad to write, for so large a body of readers, upon the topics in which I feel so strong an interest and which, I think, ought to have a wide and thorough discussion. I hope our new editor is a believer in equal rights, which I consider one of the vital issues of the time, and one upon which both men and women need to be thoroughly informed. It is, however, occupying so much space in the newspapers and magazines of the day that no one need remain in ignorance of its merits or demerits. I can ask for Mr. Carter nothing better than that he may receive the same kindness and courtesy from his readers that have been shown to me. During all these years I have never received one abusive or insulting letter, such as editors are often favored with. On the contrary, I have had scores of friendly and sympathetic messages, flowers, photographs and other gracious mementoes. If all the letters have not had personal acknowledgment, it is because my pen has been kept so busy that this has been impossible. The contributions that have been sent for publication have received careful attention and almost all of them have been forwarded to the publisher. If they have not appeared, it has been due to the crowded columns.

I shall always retain the warmest interest in the success of the MAGAZINE and in the personal welfare of the contributors to the Woman's Department. While the past twelve years have brought into my life many sad changes and much sorrow and disappointment, the associations connected with the MAGAZINE have been bright and enjoyable. It is with genuine regret that I sever my relations, and with the earnest hope that I may be held in kind remembrance.

IDA A. HARPER.

### MODERN VS. ANCIENT THEORIES.

We referred in an article last month to the changed ideas in regard to occupations and recreations for women. From newspapers of recent date I have made several clippings which illustrate, in an amusing way, the altered sentiment in respect to various things which, a few years ago, were laid down to women as fixed and immutable laws. For instance, we have been told always that every girl must learn to cook; though she be ignorant of all else, she must know how to cook; "the way to a man's heart is through his stomach;" all desirable husbands are in pursuit of the girl who knows how to cook, &c. &c. Is that bright paper, *Kate Field's Washington*, is a most felicitous article on this subject, written, too, by a man! He denies that "the biscuit block is the cornerstone of the foundation of domestic happiness, and that

the sacred fire on the altar of Hymen must be kindled in the kitchen stove." Hessay:

To hear the culinary romancer one would think that a knowledge of cooking was the foundation of all womanly virtue, but out of the depths of personal experience I venture to assert that there is no saving grace in the use of the skillet and dispan. In all my experience I have never known a marriage to result in failure because the wife could not cook, and I do know at least one divorce, and many marriages unhappy enough to terminate in divorce, where the wife in each case is an admirable housekeeper and skilled cook.

He ridicules the stories about "the tempting supper cooked by the wife, who in a spotless wrapper, with a rose in her hair and smile on her face, appears against a background of pots, kettles and pans to welcome her husband." He has no fear that the husbands of the future will suffer, for he says:

There is no need for advice or solicitude on this subject. To most women, learning to cook is as natural as falling in love. The average woman would rather read a receipt book than a novel, and a new filling for a cake or a new dressing for salad is the most absorbing topic in the universe. Even Milton, little as he knew of women, seems to have discovered the inherent and ineradicable love of cooking that is part of woman's nature. He tells us of Eve preparing for Raphael that feast of fruits and nuts and "dulcet creams" "from sweet kernels pressed." I believe one of the drawbacks to our great mother's happiness in Eden was the lack of a cooking stove. Remember the delicious butter that George Eliot made, and Mrs. Carlyle's bread and marmalade! Are they not immortal as their makers? I oppose the acquisition of the culinary art before marriage on two grounds. First, if a girl cooks before she marries she misses one of the most exquisite pleasures of her life—making her first cake, her first bread and her first biscuits in her own kitchen. What housewife does not recall the moment of triumph when these wonderful creations emerged from the stove, very lopsided, very heavy, very yellow, but her very own! Second, if a wife has learned to cook before her marriage her husband loses the opportunity of a lifetime to show his devotion to her by eating and praising experimental cakes, bread and biscuit, regardless alike of digestion and veracity.

There are both truth and good sense in this. The vast majority of married women are greatly interested in cooking and all the other household arts, and if they are not they will never be made so by being told that it is their duty.

At the World's Fair Woman's Congress it was almost impossible to get into the building where the lectures on cookery were being given. At Chautauqua, N. Y., Mrs. Ewing has been giving courses of instruction on this subject to crowded classes for the past twelve or fifteen years. But the idea is exploded that young girls must make everything else subservient to their efforts to learn to cook. It has gone to join that other idea that every lad of twelve years must be put to learning a trade. The place for young boys and young girls is in the school room getting an education. If the girl can find time outside of school hours for the household arts, let her learn them, but the exactions of the present school system are such that they absorb almost all of a pupil's time except what is needed

for necessary recreation. If she does not get the education while she is young, she will never get it. With three months' careful instruction she can master the most essential details of housekeeping. She should do this before marriage, but if she does not do it, she can acquire them in a very short time after marriage, if she is intelligent, industrious and anxious to learn. The point is that the sentiment has passed away which regards the art of cookery as the sole end and aim of a woman's life, without which she is a failure.

Another precept which has been pounded into women by the press, the platform and, I was about to add, the pulpit, is that if she would save her body, to say nothing of her soul, she must discard the corset. By means of maps and charts her internal organs were displayed to the public gaze and all future generations were brought into the argument. Now comes so eminent an authority as the great *Pall Mall Gazette*, of London, with a plea for the corset, which it declares to be "the root of morality, self-respect and health." The *Gazette* admits that the corset, like other good things, may be abused, but of a nicely shaped, pliable, well fitting corset it says:

It braces up the moral energies as much as it does the physical; and many a slatternly Blowsabella that we see lurching along the pavement in a slum would take an entirely different view of life and its responsibilities if she were put into a properly built corset. All the diatribes that have been flung at woman's best friend are each more absurd than the other; and it is pleasant to find that of late doctors are becoming enlightened enough at last to own that civilized woman's body requires stays just as much as she requires a house to live in and a varied regime that would simply have horrified her primeval ancestors.

We believe that, notwithstanding all that has been said about the evils of the corset, the majority of men would vote against its abolition. They probably would as soon be put into a "straight jacket" as to wear one themselves but they do not like to think of the spectacle of all woman-kind uncorseted.

There is one type of women, straight, slender, with no superfluous flesh, who look well without a corset. The ordinary type of well-developed women, with a tendency to adipose, do not look well without one. If we resolve the question into one of "looks" we think these statements will be accepted. A fleshy woman is bound to look neglige, if not slovenly, without her stays; not only this, but she will find herself daily increasing in size. If she discard the corset she must also lay aside the basque and closely-fitting dresses of all kinds and adopt the flowing styles that "half conceal and half reveal." If we consider the corset from the standpoint of health—that is another story. It must be worn very loose indeed not to interfere with the free movement of the various organs. On the whole,

however, we are inclined to agree with those who advocate a well-made, comfortably-fitting corset, and we are inclined to believe that ultimately there will be a swing of the pendulum of sentiment back in this direction, from the present wave of radical ideas in regard to dress-reform.

Another example of what we are trying to illustrate is found in the changed opinion regarding the use of powder on the face. The *New York Ledger* expresses it in a recent article which begins by saying:

There are few things more absurd than the outbursts indulged in by simple minded people on the subject of powder. While no man would wish his wife, daughters or sweetheart to appear in public in a condition that would suggest Kalsomining, there are very few sensible men who do not much prefer a little carefully managed powder to the oily, common-looking faces they sometimes see and have to acknowledge as those near and dear to them.

Not a great many years ago the woman who powdered her face was severely criticised, and the powder box was concealed with the utmost secrecy. Now the fashionable young lady carries her tiny powder puff or bit of chamois skin in her pocket and uses it whenever and wherever she thinks necessary. The powder box is found also upon the toilet table of gentlemen who have learned of its value through their barber. There are many kinds of powder in the market which the physicians declare to be perfectly harmless, in fact, an improvement to the skin. There are very few complexions so perfect that they are not made better by the softening effect of some fine and delicate powder. It relieves the oily, shining appearance and preserves the skin from the roughening influence of sun and wind. Until recently the woman who dared add a little color to that which nature put in her cheeks was declared at once to be an improper character, though what was the connection between the two it is not easy to determine. Now, however, this dictum no longer can be regarded as infallible, since a great many women improve upon nature in this respect, and yet morally are above reproach. There is, perhaps, no valid reason why a woman may not put a faint flush upon her pale and sallow cheeks, except that it seems like a return to savagery. To-day I noticed a whole column in a reputable paper devoted to the paraphernalia of brushes, pomades, etc., used by the modern belles to develop their eyebrows. Since all nations, for all ages, have extolled the beauty of women, the present no less than those which have gone before, it is not to be wondered at or condemned if women strive to enhance and preserve that beauty.

We have spoken before of the prevailing craze for athletics among women that is receiving every possible encouragement and assistance. I notice a recent syndicate article, extensively used by our large news-

papers, urging women when sitting down "to keep, as much as possible, the legs on a level with the rest of the body, and occasionally to put them even higher." Contrast this with the oft-repeated injunctions to the girls of bygone days: "sit up straight," "don't cross your legs," "don't put your feet up on anything." Only a short time ago I read in an article on decorum that "a lady would never cross her feet." Poor little maidens, poor women of every age, how you have been limited and repressed during all the long centuries! But first the veil fell down from your faces, and then you were permitted to uncover your heads occasionally, and so on, and so on, until now you may put your feet higher than your head, and still remain within those magical boundaries of respectability! We will suppose this latter attitude is to be assumed only in the privacy of your own apartments, but it is something gained to be allowed to do it even there. I often think of the remark of a friend, "There is no virtue in being uncomfortable," and yet both men and women really ought to "sit up and behave themselves" in a modest and dignified manner when in the presence of others. I have often wished, however, that men would try, during an entire evening's entertainment, to sit perfectly still, as a woman does, with his hands crossed in his lap and his feet placed carefully together on the floor, or better yet, let them attempt a railroad journey under the same conditions.

The above are only a few of the numerous examples that might be quoted to show, 1st, the change in regard to many of the old-time theories; and 2d, the larger liberty that is granted in personal matters. While this tolerance of modern times is noticeable with respect to men, it is especially marked in the case of women, because their restrictions and limitations have been so much more severe, and because all the rest of the world always has felt it to be a duty, in which they also seemed to find great pleasure, to dictate and superintend the smallest details of woman's existence. The women of the future will relieve mankind at large of this great responsibility.

#### A FINAL WORD FOR EQUAL RIGHTS

It looks now as if nothing would or could delay the coming of woman suffrage, which is, in fact, what we mean by equal rights. While women do not have the latter in the fullest sense of the word, yet they are gradually coming into possession of their own and they cannot fail to be invested ultimately with the full title. The gaining of the suffrage will end, practically, all other barriers.

The experiment in New Zealand is conceded to be an unqualified success. We

are apt to think of this far away English colony as a semi-barbarous place, but in reality it is far advanced in art, culture and commercial enterprise. At the last election 90,000 women and 129,000 men voted. The universal testimony, without a dissenting voice, is that the woman voters exercised the very best of influence over the election, which, although one of the hottest, was also one of the most respectable ever held. Rev. Dewitt Talmage, who is traveling in that country, writes enthusiastically: "Instead of the ballot box degrading woman, woman is here elevating the ballot box. Why, in New Zealand, or America, or anywhere else, should man be so afraid to let women have a vote? Man at the ballot box is a failure. Give woman a chance." Hon. Joseph Howard Witherford, of the Auckland, N. Z., harbor commission, who is now in San Francisco, recently addressed the women's clubs, giving the most decisive testimony in favor of woman suffrage. He says: "It operates as a tonic in domestic life, centering the thoughts of the household on the condition of the country, making patriots and students of all. Even women who had declared they would not vote, at the last moment registered and voted. Let me say one thing to the men of San Francisco, the moment you enfranchise women your problem of political bossism and corruption is forever solved. If you American people really want purity of elections, you cannot do anything better than to hasten the ends and aims of your equal rights league." We might quote columns of similar testimony, but space forbids.

The suffrage in Wyoming has never been considered a fair test, by the opponents, because there are no large cities in that state and, proportionately, a small number of women. The test in Colorado, however, is perfectly fair and must be accepted as a legitimate argument. There the women have registered, attended the primaries and voted. The sentiment is unanimous on the part of Republican, Democratic and Populist newspapers, that woman suffrage is a success. The women turned out in great numbers to the primaries, in some of the precincts outnumbering the men, and, according to the papers, "They swept out of existence the rings and combinations, the bums and ward heelers." The *Denver Republican*, speaking for all political parties, says: "The most intelligent and cultured women are taking an active part in political matters. They have inspired good men to go to the voting places and have gone themselves. Their influence has been thrown for good government and there is reason to believe that it will always be cast for better methods and cleaner, purer politics. The percentage of good women is far greater than the percentage of good men,

and their influence in politics will be for good against evil." The abundance of such testimony as this ought to be a sufficient answer to the old stock arguments that have been doing duty so long. Women have been put on the state tickets of all the political parties and, no matter which wins, there are sure to be a number of women in the next Colorado legislature.

Utah will come into the Union with woman suffrage. Strong equal suffrage planks were adopted by each of the political conventions, Republican, Democratic and Populist, which met to elect delegates to the convention that will prepare the state constitution; so there is no doubt whatever that equal suffrage will be a part of it. Women voted in Utah in 1869, but the franchise was taken away from them by an act of congress directed against polygamy.

By the time this is read, Kansas will have voted upon an amendment to her constitution giving the full suffrage to women. The most trustworthy authorities predict that it will carry by a good majority. If such is the case, next year will see women with the full presidential suffrage in four states—Wyoming, Colorado, Kansas and Utah. There are already over twenty states where they exercise some form of suffrage. There is scarcely one state where the women are not organized and making an effort to obtain the franchise.

In Illinois women have school suffrage only, but they are making the most of it this year, as all the state tickets have nominated women for trustees of the state university. In Chicago the excitement has run high, the women have headquarters in the best hotels, and, according to the press dispatches, the committees represent "the brains, the wealth and the aristocracy of the city." In answer to a demand the wife of Governor Algeld wrote a letter to the woman's campaign committee saying, "I assure you that I shall vote the straight Democratic ticket, as far as I can." The women turned out in great numbers to register, going to hotels, billiard parlors, livery stables or wherever the booths were located. The men ceased smoking, took off their hats, and, at one place, each lady was presented with a rose. In the disreputable wards the registration was very light. All the candidates are women of fine attainments and excellent character, and it makes no especial difference who receives the majority of votes.

The State Grange of California, an important organization in this great agricultural region, has just recommended a woman-suffrage amendment to the state constitution of California.

The national convention of Carpenters and Joiners, in session at Indianapolis, adopted a platform which is to form the

nucleus of that of the National Labor party. One of the planks declares unequivocally for woman suffrage. The most prejudiced observer will be forced to admit that the full enfranchisement of women in a number of the states will take place before many years. In some of the less progressive it will be delayed, but it finally will prevail. It is a question of principle, of equity, of justice, and in complete accord with our constitution, which guarantees equal rights to all citizens of the United States.

#### EDITORIAL NOTES.

Junius Henri Browne has an excellent article in *Harper's Bazar* on the new order of "Blue Stockings," the name given in olden times to literary women. He finds them, contrary to the ancient idea, without any eccentricities, well-dressed, good house-keepers, companions, wives and mothers. He says that Blue Stockingism adds to the interest of feminine nature and makes it more winning. "The sexes may be primarily drawn to one another through the heart. But it is the endowed mind that strengthens and fixes the attraction. We tire of almost everything but that. That holds to the last."

A little girl is said to have written the following bright essay:

Boys are men that have not got as big as their papas, and girls are women that will be ladies by and by. Man was made before woman. When God looked at Adam he said to himself: "Well, I think I can do better if I try again." And He made Eve. God liked Eve so much better than Adam that there have been more women than men. Boys are a trouble. They wear out everything but soap. If I had my way half the world would be girls and the rest dolls. My papa is so nice that I think he must have been a little girl when he was a little boy. Man was made, and on the seventh day he rested. Woman was then made, and she has never rested since.

Cardinal Gibbons, at Baltimore, has preached a strong sermon against woman suffrage. He says: "Woman cannot vote and I am heartily glad of it. I hope the day will never come when she can vote, and if the right of suffrage is ever granted to her, I hope she will reject it." The cardinal is not usually behind the times, but he does not seem to be well read on this point. Women can vote and the day has already come. He may hope that they will reject it, but the probability is that when the franchise is universally granted, the Catholic church will be just as anxious to have its women, as it now is to have its men, vote for its own strength and perpetuation. There are a great many people

who think that the clergy should keep out of politics, but, if there were a law disfranchising them, the revered gentlemen themselves would insist upon its repeal. In fact, we need the clergy and the women and all other good elements to redeem politics from the depths to which it has been dragged by the long-continued control of the bad elements.

An audience of 20 000 people at St. Louis, witnessed a sculling match on the lake in Forest Park between two young women. At the Shell Mound range, near San Francisco, a woman more than held her own with a Winchester against the crack shots of the Columbia Pistol and Rifle Club. At San Diego, a young woman has made application for a government license to act as steamboat pilot.

The greatest thing in the world is love. The place where it is most needed and best appreciated is in the household.

"Be swift to love your own, dears,  
Your own who need you so;  
Say to the speeding hour, dears,  
I will not let her go  
Except thou give a blessing;  
Force it to bide and stay  
Love has no sure to-morrow,  
It only has to-day.

"Oh, hasten to be kind, dears,  
Before the time shall come  
When you are left behind, dears,  
In an all lonely home;  
Before in late contrition  
Vainly you weep and pray,  
Love has no sure to-morrow,  
It only has to-day."

Miss Francis E. Willard has just passed her 55th birthday, and it was celebrated by Chicago in royal style. In the beautiful hall of the Woman's Temple Miss Willard was escorted by the "Boys' Brigade." She was welcomed by distinguished representatives of the W. C. T. U. C. C. Bonney, of the World's Fair Congresses, spoke for the citizens of Chicago; Rev. John Henry Barrows, for the clergy; Dr. Henry Wade Rogers, President of the Northwestern University, for the educators; W. J. Onaham, chairman National Prohibition Committee, for the Roman Catholics; the Good Templars, the Christian Endeavor, the colored people, the Federation of Labor, all presented addresses of welcome. There were songs and poems, the unveiling of a bust of Miss Willard, and the dedication of the Chautauqua fountain. No American woman ever was so honored, none ever better deserved it. Thirty years ago when a few brave women wanted to speak in public in the cause of temperance, they were insulted, driven from the hall and came very near breaking up the convention. The world moves slowly, but it moves.

At St. Xavier's College, New York, there have been for the past two years, several hundred women in attendance upon the lectures. This year the male professors and students have decided that they no longer wanted the girls, and have barred them all out. From Wesleyan College, at Middletown, Conn., there comes stories of rude and overbearing treatment of the girl students. One young man writes a protest to the college paper against admitting any more girls, and the same paper publishes the statement that out of nine honors in freshman mathematics, the girls took seven. Possibly the boys have reasons which they do not care to state, for keeping out the girls. There are a number of large universities where women receive the same consideration as men, and these are the ones that women ought to support. Among the more prominent are the University of Michigan, Chicago and Stanford, where there is absolute equality, as far as it is possible to have it.

*General William Booth.*

Twenty-nine years ago the Salvation Army did not exist, even in name. Now there are four thousand societies and eleven thousand officers spread over forty-two countries. All this is the result of one man's conviction and indomitable perseverance.

When General William Booth arose before a vast audience in Convention Hall, I saw the same type of man that sailed from England in the Mayflower and planted the seeds of civilization in New England. Obsessed with an idea, General Booth has lived for it, is making a crusade for it, and will eventually die for it. Tall, spare, nervous, keen, strong, with an eagle eye and an aquiline nose, General Booth has not one oratorical grace, yet he dominates an audience to the end. Language does not flow from his lips as if there were an unceasing spring of thought within. He speaks in jerks, with a rasping voice so lacking in power in the beginning, as to make you fear he will surely break down before long.

After you get used to the weird, gaunt, restless face and figure and a delivery that is absolutely individual, and after General Booth has fitted himself to his surroundings and has lost himself in his subject, speaker and audience are in sympathy and the magnetism of earnest truth weaves the spell that accounts for the success of the Salvation Army.

General Booth is a born leader. He is moreover an actual Christian leader. His love of Christ means practical religion, the only religion that is not a parody on the word, the only religion that saves souls for the reason that it begins by rescuing bodies. It is the religion that loves humanity well

enough to live in the slums and consort with criminals and sinners. It is the religion that believes in the divine spark latent in the most degraded and fans it into a flame. Seventy-five per cent. of the wretched men and women who come under the influence of the Salvation Army are restored to decency and usefulness. What a record! Why not put Booths at the head of our prisons?

To redeem "Darkest England" General Booth has come to this country to collect three hundred thousand dollars. His scheme of home colonizing, manufacture and tilling of the soil has already absorbed \$650,000, raised in England. He is in debt, however, and tells his story to us, hoping to soften the heart of some millionaire. May his hope be realized, but what a commentary on England is the presence among us of General Booth in the role of a beggar for humanity's sake! Think of it. England is the richest country in the world. All nations pay tribute to her. She is everybody's creditor. She loans money to China and Japan, and Egypt and North and South America, and grows fat on the interest that is often wrung from her debtors at the point of the bayonet or with the lash of the whip. She has so much capital as to conquer continents and islands in order to invest it, and yet she lets General Booth appeal to one of her largest debtors for a miserable three hundred thousand dollars, though his human redemption scheme returns a profit of three and a half per cent in cash!

What would England say if an American Booth crossed the water to beg for three hundred thousand dollars with which to save the souls of our criminals, the majority of whom are products of Europe, and largely British? Let everyone answer as conviction prompts. Is it not shameful that General Booth must come here to be rescued from an unselfish debt? Does not it occur to many that the millionaires whose hearts may be touched should remember that charity begins at home, and that half of every dollar given to the Salvation Army should be expended on branches in the United States? Poverty begets crime; the poverty of the coming winter will tax to the utmost the endurance of struggling thousands and the purses of struggling rich.

Go, all, and hear General Booth; then draw your own conclusions.—*Kate Field's Washington.*

A short time ago the women of Kentucky arose over the action of a man concerning a woman. Last week an old Kentuckian of eighty-four married a young girl of fifteen and, outside his own family, the clamorous women of Kentucky said nothing.—*Illustrated American.*

DECEMBER, 1894.

## BOYCOTT AGAINST THE BROTHERHOODS.

About the fifteenth of last August, General Superintendent Sweigard, of the Philadelphia & Reading Railway, notified members of the Brotherhood of Railroad Trainmen that they must renounce their brotherhood or be discharged from the service of the Reading Company. National laws have been enacted that make it legal for working men to form organizations for their own protection, yet the receivers of the Reading Railway, as representatives of the court, propose to abrogate those laws.

On the 15th of September Grand Master Wilkerson, of the Brotherhood of Railway Trainmen, remonstrated with the receivers against the action of Superintendent Sweigard, to which he received the following reply:

The policy of this company is well known to be that it will not consent that persons in its service shall owe allegiance to other organizations which may make claims upon them which are incompatible with their duties to their employers. This position was taken advisedly and we have no intention of departing from it.

Had this communication been written in the states of Massachusetts, New York, Ohio, Indiana, Illinois, California and some other states—and even in Great Britain—the receivers of the Reading Railway could have been prosecuted for a criminal offence, but in the great state of Pennsylvania, with its population largely made up of working people, it is no crime for employer to treat employes in a manner that should bring the

blush of shame to those who have cast votes in past elections.

The members of the Brotherhood who were threatened with discharge appealed to the mercy of Judge Dallas, in whose court the receivership rests. The Judge has acted in a manner that would convince the most charitable person that he is either prejudiced against the labor movement or is ignorant of law. The brotherhood's appeal for mercy was unavailing, and Judge Dallas has given the boycott against labor organizations the sanction of the United States government. The contempt, so illy concealed, in which he is held by Attorney-General Olney, who assumed the task of pointing out his errors in a gratuitous letter of advice, had no effect on Judge Dallas. This letter is published complete in this issue, under the caption of "Olney and the Brotherhoods," and will prove interesting reading.

In his recent decision Judge Dallas says:

The fact is that leave was asked and was granted, to file an intervening petition; and accordingly (October 8, 1894), the petition of Levi Hicks was filed, wherein it is alleged that he is an employe of the Receivers, and is a member of the Brotherhood of Railway Trainmen; and, upon information and belief that the statements contained in the preceding petition are true. This petition was amended on October 27, 1894, and again on November 13, 1894. The answer to it, as at first presented, was filed on October 12, 1894; and the first amendment was answered on November 5, 1894; and the second amendment on November 19, 1894. The petition of George S. Riley was filed on October 27, 1894, and the answer of the Receivers thereto was filed on November 5, 1894. Upon the application of the counsel for the petitioners the cause was assigned for hearing, and on the day appointed was fully argued. The case having been thus heard on the petitions as amended, and the several answers thereto, the answers are to be taken as true; 2 Daniels, Chancery Practice, p. 982; and, applying this rule to the cases of Levi Hicks and Geo. S. Riley, the facts before the Court so far as deemed to be material, may be concisely stated. Both of these persons are in the service of the Receivers, and both are members of the unincorporated association known as the Brotherhood of Railway Trainmen.

A rule was adopted by the railroad company in the year 1887, and has since been maintained by it and by the Receivers, to the effect that no one would be employed in its service who was a member of such an association, unless he would agree to withdraw therefrom. Levi Hicks was employed as brakeman on October 20, 1893. The established form of application, representing that the applicant was not a member of any labor organization, or that, if such member, he would withdraw therefrom, was pre-

sented to him for signature, and thus the rule above mentioned was especially brought to his notice; but he then declined to state whether or not he was a member of such an organization, and thereupon he was employed, but by a subordinate agent of the Receivers, and without their knowledge or that of their general superintendent. On or about August 15, 1894, he was notified by the latter that unless he would give up his membership in the brotherhood he would be discharged. He still, however, retained both his membership and his employment, and on October 8, the day on which his original petition was filed, and after it had been presented, the general superintendent had an interview with him and others of the employed, at which 'no threat was made of discharge, but reference was made to the agreements under which the men had entered the service of the company, and to the rules of the company, and they did agree to withdraw.' The proposed discharge of George S. Riley has no connection with his membership in the Brotherhood of Railway Trainmen, but is caused solely by his failure to satisfactorily perform his duties.

"The circumstances disclosed in the case of Levi Hicks do not entitle him to the interposition of a court of equity on his behalf. Without animadverting upon his participation in the equivocal and exceptional means by which he secured his present employment, it may, at least, be said that his assumption that the fact that he so secured employment imposes upon the Receivers an obligation to retain him in it, ought not to be sustained. Even if they should not be permitted to dismiss an employe because of a fact known to them when they employed him, still they should not be compelled to keep in their service one who, without their knowledge, entered it in conscious violation of a long-established regulation, though with the connivance or negligent assent of some minor official. The notice of August 15, 1894, was, therefore, rightfully given, and should have been regarded. The Receivers had done nothing which, upon any reasonable ground, could be set up to deprive them of that freedom of action which, in such matters, employers and employed are alike, and always at liberty to exercise. When unaffected by contractual obligation, the right to determine their personal relations pertains to all men, and is no less inviolable than is their right to form them according to their own will and pleasure.

The promise made by Mr. Hicks, after his petition had been filed, may have been, and probably was influenced by a desire to assure his retention of his place, notwithstanding his failure to respect the notice of August 15; but it was not induced by any threat then made, nor does it appear that his participation in this proceeding was objected against him. If it had been, I would not have hesitated, upon attention being called to it, to make it quite plain that no man can be prejudiced by applying to the Court for relief to which he thinks he is entitled. But there is nothing of the kind in this case. The purpose to discharge Mr. Hicks unless he would resign from the Association was communicated to him about two months prior to October 8, and his promise of that day was given simply in the exercise of

his right of election between the alternatives which had been previously presented to his choice. The fact is that he did agree to sever his connection with the Brotherhood, and though in making his selection he was doubtless confronted by a dilemma, it is obvious that he was not in any legal sense subjected to compulsion. But it is not necessary that I should, and I do not, rest my judgment upon this tardy agreement. It is at least certain by making it Mr. Hicks acquired no better position than he occupied before; and, without it, I am of opinion that the Receivers would have been justified in dismissing him upon grounds peculiar to him, and wholly irrespective of the broad question which he has attempted to obtrude into this case. It results that the petitioner Hicks has not made out a case entitling him to the relief which he seeks; and it is even more manifest that the case of George S. Riley is utterly devoid of equity.

#### A NEW DISPENSATION.

The Civic Federation of Chicago took the initiative in a movement, which probably had its origin in the late labor troubles and apparently is national in character, to find a solution for the labor problem when under its auspices a labor congress was held in Willard's Hall, in the city of Chicago, on the 13th and 14th of November. What success will crown their efforts, what results if any will accrue, has not yet materialized, but that it is a forerunner of an agitation throughout the country in favor of a harmonious settlement of differences arising between employer and employe is evident.

The subject up for debate was whether or not the time had come for the people, the nation, to step in and offer its services as a mediator, conciliator and arbitrator. Some of the greatest thinkers of the country participated in the discussion. Students and professors of political economy were well represented. The same can not be said of the employer, and to a certain degree, of the employe.

The inference to be drawn from the sentiments expressed before this Labor Congress were: 1, the people are heartily in accord with the movement which has for its purpose the settlement of labor disputes by conciliation and arbitration; 2, the employer is positively opposed to such an undertaking; 3, the employe is indifferent. That the people expectantly, yes, anxiously, await the coming of this new dispensation can not be denied, therefore, the inference drawn from this congress is correct. By

their conspicuous absence and lack of sympathy for the efforts of the Civic Federation it is convincing that the employer looks upon the movement with suspicion and distrust. The fact that many labor leaders were invited and but few attended would indicate an indifference on the part of the employe. It is with the latter supposition that this article deals.

If it is a fact that the working people of America are indifferent or opposed to the settlement of disputes with employers by arbitration before resorting to strikes the MAGAZINE must confess that it has misconstrued the loudly proclaimed utterances of workmen and their representatives in the past. Its acquaintance with the labor movement outside of railway circles is superficial but with the railway labor movement it is positive that arbitration before resorting to strikes has ever been a tenet, a doctrine, of all prominent railway organizations. A federation of conductors, trainmen, switchmen and firemen formed several years ago had a clause in its constitution which positively forbade a strike until an attempt, at least, had been made to arbitrate.

Of course the desirability of conciliation and arbitration as a legal process depends largely upon the details of the law. It should be compulsory to that degree that corporations could not assert with arrogance that there was "nothing to arbitrate." The facts of the injustice should be ventilated by law and an opinion reached by good and true men acting as arbitrators should be published to the world. Here all compulsion should cease and the weight of public opinion alone should be the only controlling influence. There can be no law that says a man must work for a certain wage nor can there be a law that compels a man to pay a certain wage, but there should be a law that publishes to the world an arrant act of injustice perpetrated because of the power possessed by the one over the other. This law should be expeditious, capable of being quickly set in motion, and assure decisions not delayed.

If ever a strike has been precipitated by a labor organization that was unjust it has been because of a lack of knowledge by that

labor organization of all circumstances connected with the case. The purposes of a strike are solely for exaction of justice and never for the perpetration of a wrong, and the MAGAZINE has no knowledge of any strike entered into by the Brotherhood that it would not gladly have the causes published to the world. Can the same be said of the employer? If a railway corporation knew that a legal tribunal of the people was ever ready to take cognizance of the tyrannical edicts that so often emanate from an official source, of the many unjust reductions of wages in order that foreign bond holders and possessors of stock that never cost a dollar may dwell in gilded palaces, those corporations would hesitate before bringing upon their heads the disapproval of their patron, the public. If, after this, no results are reached then strike—and strike hard.

---

#### CONTRACTS.

From time immemorial—immemorial as far as railway labor organizations are concerned—the great objective point, the *ultima thule* of the hopes of railway employes has been to secure contracts and agreements and schedules of wages with railway companies. These contracts and agreements have cost the brotherhoods more than any other benefit except it be insurance.

Contracts have been to members of the brotherhoods as the *Magna Charta* to the English people; a constitutional bill of rights to be observed by all—king and peasant, official and employe. Where firemen have been oppressed, overworked and underpaid, discharged by petty officials for imaginary offences, deprived of rights, their first effective relief has been in contracts secured through the influence of the Firemen's Brotherhood. It has been the labor of the Brotherhood which succeeded in obtaining contracts with nearly every important railway system in the country, but with all this labor and expenditure of hard-earned money many have been brushed aside in a moment of petulance. Members of the Brotherhood have violated these contracts without any just and sufficient cause, have torn down in a day what it took years to build up.

There are vast sections of the country, sections traversed by large systems of railways, where the Brotherhood had procured the best contracts, highest rate of pay and greatest privileges, where no contracts now exist, and not one was abrogated by the companies. The change has been terrible, the effects horrible. Thousands of happy little homes have been made desolate, as desolate as the charred fields in the wake of the great forest fires—and why? Was it because the companies had violated their contracts? Was it because men had struck against oppression? No. It was because the brotherhood was “too conservative,” and, perhaps, members did not appreciate its benefits.

It is all over now. Like some horrible dream it still burns the memory, and years will come and go before the scars will all be effaced; yet, some say that it is to be repeated—the East must undergo the trying ordeal and do penance in sack cloth and ashes over the grave of organized labor as has been done by the West. Shall men be lead to their ruin like sheep to slaughter, ignorant of impending danger, though nearly stifled with the stench from the carcasses of their own kind?

Some may have grievances against the Brotherhood because the Brotherhood did not violate every solemn obligation, every binding contract, every honorable agreement, but it should not be forgotten that the Brotherhood has grievances against them. Allied corporations and myriads of scabs have never injured the Brotherhood, set back the labor movement, in all their years of onslaught, that these so-called friends have done within a few short months.

The question arises now—shall we set to work to remove the *debris*, succor the poor and needy, forgive and forget wrongs done through excitement? Yes! Hold out the hand of friendship and welcome back those who have made mistakes—aid them, aid their families and prove to them that they never had a better friend than the Brotherhood of Locomotive Firemen. Remember that thousands were drawn into this whirlpool of destruction through mistakes of the head and not the heart.

#### THE WAGES OF SIN.

Alexander III, the autocrat of all the Russias, has gone to meet his maker, and if no special privileges are granted to autocrats, he has ere this probably had cause to repent of the thousands of wrecked lives and broken hearts which have been the trophies of his reign. It must be confessed that of his kind the late czar was, if not more humane, at least less brutal than his illustrious forefathers. The knout, the thumb-screw, the rack and the many other instruments of torture which Russian imperial ingenuity has so readily contrived to ex-terminate a love of life from those in whose bosoms the flame of liberty burned are now withdrawn from the gaze of a sympathetic world, but do their duty as of yore in that cheerless, desolate region beyond the Urals.

Although, to not be impolite, the world has burdened the wires with messages of condolence, the world yet remembers the atrocious cruelty practiced within recent years upon the helpless Russian Jews. Old grey-heads butchered, virgins ravished, homes looted, and Alexander III, “The Lord’s Anointed,” the “Great Patriarch of the Holy Synod,” the supreme dignitary of the Russo-Greek church, indirectly, if not purposely, encouraged such acts by issuing edicts banishing fellow-beings because they were Jews, because they worshipped God not in the manner dictated by Alexander III.

Siberia, a name synonymous with tyranny and oppression, has again lost her royal prison keeper only to see another installed to carry forward the edict of Russia—servile submission to an imperial master or existence worse than death in the Siberian mines.

Alexander II and I, father and uncle of the late Russian monarch, were sons of Crazy Paul, who was a son of Catherine II. Before them Elizabeth, Ivan and Catherine I, sandwiched between the three Peters, were a bloody, dissolute set. Assassination, suicide and licentiousness has characterized the male members of the house of Romanoff; intrigue and unchastity has distinguished the female representatives of the family. Of such stock was the late Alexander.

While we weep for this departed monarch let us drop a tear for those poor unfortunates, victims of his tyranny. The echoes of Moscow's bells tolling in his memory will be wafted to bleak eastern plains and there mingle with the sighs of heart-broken souls.

#### E PLURIBUS UNUM.

The many kind expressions of friendship and consideration voiced by contemporary labor journals are appreciated and reciprocated by the MAGAZINE. The *Trainmen's Journal* says: "We extend our heartiest fraternal greeting and trust that the MAGAZINE and the *Journal* will continue on the same friendly footing in the future as in the past." The *Conductor*, the *Engineers' Journal* and *The Telegrapher* courteously and kindly give expression to similar sentiments. This is as it should be. Instead of warring, one against the another, all should unite in a common cause.

The MAGAZINE is one that believes that Federation is the solution of the labor problem and one that hopes the day is not far distant when the various railway labor organizations will follow in the footsteps of our forefathers, the American colonists, and form a federated union, one and indissoluble! Those thirteen colonies, with interests identical, remained separated, each one relying upon its own strength, for many years. All holding aloof from closer communion because of imaginary inequality or grievances, fruits of prejudiced minds, until driven by the oppression of a common enemy, they formed a federation of colonial organizations. Under this federation the American war of independence, the greatest strike on record, was conducted and won. But, the desire for federation did not decrease with the excitement incidental to the war. Five years later, in time of peace, this great federation was cemented by a solemn compact, the Constitution of the United States of America, and to-day although the autonomy of each state is preserved, they collectively form a combination that bids defiance to the world. An invasion of one state would set on foot the marching hosts of forty-four. A hostile shot fired across

our southern border would echo back with the tramp, tramp, tramp of a million brothers from the north. So it should be with railway labor organizations—so it will be with railway labor organizations.

#### WAGES OF EMPLOYEES.

Under the above caption the *Railway Age* endeavors to prove that strikes are incited by leaders of labor organizations and that "fifteen leading railway companies of the west" are only able to earn "a little over four-fifths of one per cent" on the "total stock."

When the *Age* makes the assertion that "leaders of labor organizations are inciting employes to make demands upon railway officials" it exhibits a lack of knowledge upon a subject with which nearly every reader of newspapers in the country is familiar. It has only been a few short months since the public press was burdened with glowing accounts of the institution of a labor organization which unlike all others was not "too conservative." One of the greatest incentives offered to members was that, unlike all the brotherhoods, the members would not be prevented striking by "chief executives who were afraid to allow a strike."

It has been advertised far and wide that during the past year strikes have been prevented repeatedly by advice of leaders of labor organizations, and in one case, over the protest of members, a strike was positively prohibited by the chief executive of an organization. It is recognized by the members of all labor organizations that cool headed, conservative men should be placed at the helm, and where this rule has been ignored the very existence of the organization was imperiled. No one should know this, and probably does know better than the *Railway Age*, and when it introduces such statements in a prelude to an argument it prepares the mind of the intelligent reader to accept with distrust subsequent statements.

The *Age* arrives at its conclusion that the dividends earned on stock of the fifteen leading western railways is only "a little over four-fifths of one per cent." by great "trouble to collect certain statistics bear-

ing upon the earnings and expenditures" of these railways. The MAGAZINE has gone to no "trouble to collect statistics" to refute this statement but does so as a duty it owes common decency. That Jay Gould earned hundreds of millions of dollars by collecting a dividend of "four-fifths of one per cent." upon the wealth realized by the sale of a few mousetraps is absurd, the height of the ridiculous, and is only exceeded in absurdity by the presumption of the *Age* that such a statement would be entertained for a moment by an intelligent audience. The colossal fortunes, the multi-millionaires which have sprung up, mushroom like, in railway circles during the past few years prove conclusively that enormous dividends have been realized or owners of railway stock have been duped and robbed, either of which is no reason why the wages of employes should be reduced.

---

#### COMPASSION.

Brother A. B. Youngson, Assistant Grand Chief of the Brotherhood of Locomotive Engineers, has lost all that makes home bright and happy, a dearly beloved wife, a companion and life's helpmate.

"All other goods by Fortune's hand are given,  
A wife is the peculiar gift of heaven."

To our Brother Youngson is extended a sympathy begotten of like misfortune. Oh how desolate and dreary seems the old home. Nothing can assuage the sorrow for a departed wife. Turn where you may—some favorite nook, some cherished memento, brings back sweet recollections of "Auld Lang Sine" when hand in hand in youthful days with pledges of love beautiful visions are seen through the mist of years to come. For our Brother Youngson the members of the Firemen's Brotherhood have none but the tenderest compassion in this his hour of affliction.

---

#### RIGHTS OF HUMANITY.

With what degree of virtuous indignation corporations resent any intrusion by the people upon their rights of property. The rights of property are sacred, far more sacred, than the rights of humanity. Coal mines may be closed at the dictates of

property—while humanity with cold may perish, perish at the very mouth of the pit. Humanity could dig into the earth, armed only with pick and shovel, and earn food, clothes and all that makes home bright and happy but the rights of property stand an impassible barrier and says, "Touch not one clod of that mountain, it is mine. I own the earth and its hidden wealth."

But should a railway corporation fix its wistful eye upon the little farm in the valley property ceases to have rights. The old homestead where you were born, the little graveyard where a white slab marks the last resting place of your dear old mother, all, all must be swept away to make room for a railway corporation. There is no right of property that saves the old home, nothing to save all that is dear to memory.

All property should be protected, should have rights, but the rights of humanity should be given precedence.

---

#### STRIKES—LEGAL, ILLEGAL.

With the above caption there is published in this issue an article contributed by Judge Thomas W. Harper, attorney for the labor organizations in the recent appeal in the Jenkins case. The opinions of Mr. Harper have great weight, and every reader who has any interest in the labor movement will do well to carefully consider statements presented in this article.

Because of the apparent diversity of opinion among people, in fact among men high in judicial circles, the MAGAZINE determined to get a legal definition of a legal strike, and therefore requested Mr. Harper to give the readers of the MAGAZINE the benefit of his professional knowledge.

It would seem that the "combining and conspiring" of working men to quit the service of a corporation in a body is not illegal so long as the combining is for their own benefit or for their own defense; but when the object is solely to injure another then the act becomes an illegal "conspiracy." It would be useless to make editorial comment of the intent of the laws, while the article in question is so explicit in details.

## CURRENT COMMENT.

**Great Cry and Little Wool.** From all the splutter and boastful predictions of what labor was going to do at the recent election one would naturally have expected at least a constable elected in some outlying precinct who was nominated as a "laboring man." Up to date the constable has not been located. The *American Federationist* says:

If our readers know of any union man who has been elected to any office at the election November 6th, and will send to this office on or before the 15th inst., his name, trade, union and the office to which he was elected, we will publish it in the December issue of the *American Federationist*.

**The Nation's Defenders.** Workingmen concede to none greater patriotism, greater love of country, than is possessed by workingmen. Upon the yeoman's strong arm the nation depends for her defence, and not upon labor's traducers, who are only bribed into service by gaudy epaulets and remunerative salaries. When our nation needs defenders labor organizations will contribute their very existence while their accusers will be found in the quartermaster's department or engineering some gigantic swindle of the government. Upon this subject the *Engineer's Journal* aptly says:

Much has been said during the last few weeks in regard to the dangers of a social revolution in this country coming from the organizations of labor. The treatment of the subject by different writers, as far as we have seen, has done great injustice to our laboring classes. We do not believe that the country has anything to fear from her workingmen.

**Is There No Relief?** It matters not to what degree thirst for alcoholic stimulants grows upon mankind it is asserted that the "Keely Cure" will destroy this beastly passion. A man can become crazed with drink, a besotted, disreputable toper, yet science steps in and raises him from the gutter back to respectable citizenship. Will the day ever come when man's voracious longing for wealth can be satiated at least, if not cured by some drug? The thirst for liquor has never wrecked the homes that have been desolated by the greed for gold. The greater success man has in accumulating wealth the more ravenous becomes his desire for increased wealth. Nothing stands a barrier in his way. No method of trickery or treachery is too low to accomplish his end. Adulterated materials, fictitious values, and, last but not least, a crushing down of labor's wage until the strain is too great, the thread snaps and all is chaos. Strikes, riots and soldiers reign supreme. The atmosphere clears, a cheap class of employees take possession of the old hearthstones, little families broken up and scattered, yet the thirst for wealth is unsatiated. Convict labor is resorted to, these legal slaves who work for

the cost of sustenance, comes to the rescue. But there is yet another step. Little children, homeless perhaps, or with widowed mothers, are conscripted into service. They are helpless, cannot strike, and will work for a few pennies a day. What will the harvest be? One shuts his eyes and shudders involuntary at the thought. The *Rail-road Telegrapher* thus advises:

The labor of little children and convict labor are used to fatten the dividends of mill and factory owners and other large employers of cheap labor. The children should be placed in schools and the convicts kept busy improving public roads.

**Equitable Judges.** The *Machinist's Journal* grows eloquent in contemplating the recent anomalies in jurisprudence, the decisions of Judges Caldwell and Wilson, and of Justice Harlan. Workingmen have become so accustomed to the partnership which apparently exists between the United States judges and corporations that decisions in workingmen's favor from such sources come like a clap of thunder from a clear sky. The supreme, circuit and district federal judges, as a rule are but corporation attorneys rewarded for past partisan services, and it is gratifying to know that at least a few are like Cæsar's wife, above suspicion. The *Journal* says:

It is indeed refreshing to the masses when they are able to learn that though we are little concerned in large matters in the make up of our government, there are yet a few men left in judicial positions who have not been tainted with the glittering inducements that are left at their disposal by wealthy corporations. This decision is a new inspiration to organized labor. It is a bright ray of hope that all avenues of right and justice are not yet closed to the toiler.

**Cheap Raw Material.** It would be reasonably supposed that with raw material cheapened manufacturers would pay higher wages or sell their products cheaper, but such is not always the case. Increased profits are the legitimate fruits of such conditions, fruits harvested by capital alone, until competition comes to the relief of the consumer. The laborer is seldom, if ever, a beneficiary of cheaper raw material except that it be the occasion of giving more men employment, or that the manufacturer performs the labor himself. Farmers have seen the price of wheat decrease to as low as forty-five cents per bushel, but as yet in few localities have the consumers been able to purchase cheaper bread or the journeymen bakers receive better wages. Prof. Atwater says in a late bulletin from the agricultural department:

One hundred pounds of flour will make from 125 to 137 pounds of bread, an average of about 130 pounds. Flour, such as is used by bakers, is now purchased in the eastern states at not over \$4 per barrel. This would make the cost of flour in a pound of bread about 1½ cents. Allowing ½ cent for the shortening and salt, which is certainly very liberal, the materials for a pound of bread would cost not more than two cents. The average weight of ten cent loaves, purchased in Middletown, Conn., was one and one-fourth pounds.

This makes the price to the consumer eight cents

per pound. The price of bread and the size of the loaf are practically the same now as when flour cost twice as much. The cost of baker's bread is a comparatively small matter to the person who buys only a loaf now and then; but in the eastern states and in the larger towns throughout the country many people, and especially those with moderate incomes and the poor, buy their bread of the baker.

**One Cause of Poverty.** That the poor are becoming more numerous is evident.

With all the strenuous efforts of labor to gain control of wealth little remains after all bills are paid. These bills have as much to do with the increase of the poor as has the question of wages. Good wages with thrift and frugality are poverty exterminators, but good wages and prodigality leaves the poor poorer. It is said that more is spent for drink than for food and the following from the *Illinois Watch-tower* would verify the saying:

At a largely attended meeting of the Catholic clergymen and laymen of one of the leading parishes of Chicago, Father M. P. Dowling, one of the most earnest of those demanding reform, made an address in which he gave some startling figures. He said that the total cost of the World's Exposition was \$25,000,000, the gate receipts \$10,000,000 and the appropriation of the city of Chicago, \$5,000,000. And yet stupendous as these figures are, the money annually paid to the Chicago saloon-keepers is nearly twice the combined construction and general expenses of the World's Fair, about five times the total gate receipts and nearly ten times the city's appropriation. During the six months of the fair the saloons of the city received not less than three times the gate receipts, \$3,000 going to them for every \$1,000 paid the fair.

**The Secret Ballot.** A strong argument is offered against the "Australian ballot," adopted in many states, when attention is called to the fact that it precludes the possibility of a citizen voting for his individual choice for any official position should he object to the candidates selected by the various political parties. He is compelled to choose between those candidates whose names appear upon the official ballot. The "independence" of the American citizen becomes a myth, and he votes as some party dictates or does not vote at all. But when the secrecy of the Australian method is taken into consideration, the plan is not so bad after all. In the state of Montana an election has just been held to select a city for the future capital. The following taken from the *Great Falls Leader* shows how elections are conducted under either style of balloting:

BELT, MONT., October 16, 1894.

Charles L. Fisk personally appeared before me, a notary public in and for the town of Belt, Cascade county, Montana, and made oath to the following:

"This morning I was asked while working at carpenter work for the Anaconda Company (Castner Coal and Coke Company) whether I was going to vote for Helena or Anaconda. I told them that I would use my own judgment in that, and would vote for Helena. Then I was told to go to the office and get my time."

(Signed.) CHARLES L. FISK,  
Subscribed and sworn to before me this, the 16th day of October, 1894.

[SEAL.]

WALTER J. KENEDY,  
Notary Public.

**Aid for the Unemployed.** The time has come when something should be done to aid the families of those unfortunate victims of the recent labor troubles. You that have employment, have homes and firesides for wives and babes, can not realize the condition of many of our former brothers. It matters not that they may have erred—they are now in distress and should receive relief at the hands of those more fortunate. The *Denver Times-Sun*, of November 16th, says:

Considerable concern is developing in relation to the number of railway men in the city suffering for the lack of food, etc., who quit the employment of the railways during the strike. It is estimated that there are about 200 families in a destitute condition and about 400 unmarried men who have no means of getting subsistence. While some of the men claim they are blacklisted, the railway officials say nothing of the kind exists. A committee which has been examining the condition says something has to be done at once to relieve these people. Railway officials say there is not enough business to employ them, and there is being planned a public meeting to take up the question and consider some plan of relief. For four months and over these people have had no employment. The cases are considered very serious.

**Rival Organizations.** What a pity that men who work for a living cannot agree to dwell together in peaceful union. After years of labor to unite men in organizations for their protection and the protection of their families, something comes up to disunite them. A little difference in policy, some new feature advocated by an ambitious member, takes root and the work of disintegration commences. Instead of agitating these reforms within the ranks of the organization an opposition movement is set on foot and the labor of years is destroyed in a day. If all who have different theories of national government should set up opposition establishments political affairs would indeed be chaotic. The *Eight Hour Herald* lamentingly says:

There are probably two hundred and fifty skilled printing pressmen in Chicago—enough to form a very formidable union when the peculiar surroundings of this craft are taken into consideration. But there are not enough of them to form two unions, especially when the two organizations engage in an unrelenting war of extermination upon each other, and more especially when each faction is determined to draw employers and the whole printing industry into their squabble. Employers do not relish having their establishments declared unfair by one or the other of these rival unions on every possible occasion. No matter which faction is employed, the other one has a grievance.

**Labor Organizations Before the Courts.** The decision of Judge Caldwell in the Union Pacific case, of Judge Wolson in the Omaha & St. Louis (Wabash) case, and Judge Harlan in the Jenkins case, show what labor organizations can do for railway employees without resorting to grievance committees and strikes. Of course the records of the courts ignore labor organizations. It would seem from the

records that the "employees" won the battle, and labor organizations were no party to the suit. The fact of the matter is labor organizations took up the grievance, employed the attorneys and paid the bills. Not 50 per cent. of the "employees" contributed either morally or financially to the cause. The reason of this is the law does not recognize a labor organization except to prosecute, if not to persecute, and many "employees" reap the benefits of a legal victory without risk or expense. In speaking of the recent legal battles in which labor organizations have been victorious the *Railroad Telegrapher* says:

None of the railroad labor organizations care whether the employees are recognized as members of their several brotherhoods or not. Organized labor does not permit official dignity to stand in the way when it is necessary to carry a case into court. They are satisfied to know that organization enables the employees to confer with one another and receive necessary advice, etc., and that such conference and advice results in the grievance receiving the recognition of a legal court.

Gratitude has ever been considered one of the most beautiful of human attributes. Women, as the mothers, daughters, wives and sweet-hearts of men, are notable for the possession of this characteristic, but as politicians, they have recently, like all other politicians, shown a disregard for benefactors. The franchise, the chance to vote—just once like a man—has been the ambition of many women and it was believed that the party that championed women's suffrage would at least receive the support of a considerable majority of women voters but, woe to the Populists, these expectations were not realized. Kate Fields in her *Washington*, says:

There is no doubt that Colorado women owe the suffrage to the Populists, though my previous statement to this effect was recently denied in the *Denver News*. Here are Governor Waite's own words, taken from the *North American Review*:

"There is no doubt that in Colorado the women owe the suffrage to the Populists. The Populists in the General Assembly nearly all supported the bill, but a majority of the members of both the old parties voted in opposition. The law was recommended by a Populist governor, the bill was introduced by a Populist representative, at the general election the Populist party in the state supported the measure, but nearly all the Republican counties and all the Democratic counties voted largely against it."

Fifty-five per cent of the votes in Colorado was cast by women, and Governor Waite may well say that "the women did it."

At Indianapolis, on October 20th, a federation of trades unions of the iron industries was formed under the name of the Federated Metal Trades. A committee was appointed to draw up a plan of federation satisfactory to all trades represented. Lee Johnson, of the boiler-makers, was elected president, James O'Connell, of the machinists, vice-president, and Wm. Anderson, of the brass-workers, secretary-treasurer.

#### SHALL ARBITRATION BE REJECTED?

The situation among the striking cloak makers is desperate, says a New York dispatch dated November 14th. They started out with strong faith in the outcome. This confidence was justified empirically by the supineness of the manufacturers in the past. But the firms, which had suffered from many such difficulties all the year, finally determined by co-operation to make a fight. In a short time the strikers had nothing but hope, based on the chances of the order for a general garmentmakers' strike. When this failed and the firms still held out the workmen were reduced to charity, and that is their sole reliance now. Affiliated unions have sent them some aid, united labor generally will raise something for them at mass meetings soon, and business men, saloonkeepers and others are supplying some food and promises of clothing. Such action will not help long, and as the strikers are disposed to hold out it is probable that 9,000 or 10,000 able-bodied men and women, with a skill for which there is a market now, will be thrown on the charity of the community before the winter is over. These few incidents illustrate the serious conditions existing. \* \* \*

In the damp, dark basement of Walhalla Hall nearly a hundred men who have been turned out of their homes with their families because they are not able to pay their arrears in rent, have been compelled to sleep on the hard board floor. Their wives and children they have left with neighbors who have still a roof to cover their heads. The basement where these wretched people sleep is about twelve feet beneath the street. Not a ray of sunlight and rarely a breath of pure air reaches it. Eight hundred ragged and woebegone men lay there last night, sighing, moaning, and groaning, unable to forget their misery in sleep. Now and then there rose and fell a prayerful murmur like the chanting of savages in the solitude of the prairies.

"Bread! O, give us bread! We must have bread!" was repeated again and again with outstretched arms.

To-day 300 loaves of bread were distributed in this basement. The men crowded around it and fought like animals for the loaves. Seventy-five more of the families were evicted to-day. The women and the children were all provided for as comfortably as the leaders could devise.

The desperation and brutality which hunger traces on human faces was shown plainly in the 3,000 men who gathered in the ball-room of Walhalla Hall to-day. Women wept. Speakers ascended the platform by dozens and said:

"We are starving, but yet we remain on strike. What do we care for hunger? Brothers, will you remain out on strike

until next spring? [Roars of 'Yes' 'Yes!'] Are you willing to give up this strike?" ["Never." "Never."]

"A scab is here!" shouted a dozen strikers. "Kill him! kill him! Out with him!" Five minutes later there was a cry of "Spies! Spies! There are spies in the meeting!" Immediately there was a great commotion. "Here they are! Kill them! Lynch them!" could be heard. Amid a great disturbance the spies were ejected with severe injuries.

Timely meditation under the auspices of a body of citizens whose worthy motives are admitted is against being widely discussed. An attempt is being made by the coat and shirt making contractors to force a return to the sweating system, which was abolished in the two industries recently by the strikers. These poor people are clamoring for bread, desperate in thought, awaiting a leader for violent deeds. But they declare they will not compromise.—*Exchange.*

#### Internecine War.

It is given out that war has been declared by the Knights of Labor upon the United Brotherhood of Carpenters and Joiners and of which P. J. McGuire, of Philadelphia, is general secretary. This organization is affiliated with the American Federation of Labor, while the Amalgamated Association of Carpenters and Joiners, and which also has a McGuire at its head, is affiliated with the Knights. At the recent general convention of the United Brotherhood, held in Indianapolis, a resolution was adopted declaring the supreme right of that order to govern all workers of the craft in the United States and Canada and declaring that hereafter it would recognize no other organization of carpenters. Since this convention the general executive board has sent out a secret circular instructing and asking for earnest co-operation in refusing to recognize any card other than that of the United Brotherhood.

This action has nettled the officers of the Amalgamated Association, which has its headquarters at Amsterdam, N. Y., and the executive board of the Knights has willingly promised its co-operation to a warfare that promises to be bitter, and which they claim will lead to the extermination of the United Brotherhood. In a secret circular which has been issued it is declared that the United Brotherhood lost 20,000 members during the past year; that 375 local unions ceased to exist, and that its narrow-minded policy will cause still further losses in membership before the next convention. Every branch of the Amalgamated Association throughout the country is to be instructed to use every effort to bring about secessions from the United Brotherhood to the rival association.—*Exchange.*

Labor's greatest enemy is labor. The

Brotherhood of Carpenters and the Brotherhood of Firemen have each much to fear from these "Fatherhood of God and Brotherhood of Man" concerns. The firemen have just undergone a severe test, and although somewhat disfigured they are still in the ring.

#### THE LABOR MOVEMENT.

The eighteenth annual session of the General Assembly of the Knights of Labor convened at New Orleans on November 13th. Grand Master Workman Sovereign was re-elected.

The Railway Agents' Association has severed its connection with its official organ, *The Railway Agent*, because of differences arising between the publishers and the association.

Grand Master Workman Sovereign, of the Knights of Labor, delivered an address at the Texas State Fair, at Dallas, on Oct. 31st, "Labor day." Many thousand workmen were present.

In New York City, although 103 manufacturing firms have agreed to the demands of the Garment Makers to cease the sweat shop system, the large concerns still hold out. It is a struggle between wealth and starving humanity.

According to the *Railway Review* (London), Mr. John Burns, M. P., and Mr. David Holmes, J. P., have been appointed by the Trades Union Congress of Great Britain to represent that body at the coming convention of the American Federation of Labor.

The American Federation of Labor meet at Denver, Colorado, in their fourteenth annual convention on the 10th day of the present month. A cordial invitation to the trade unionists of America has been issued to participate in this, their most important convention.

Members of the International Association of Machinists have formed a joint stock company at Baltimore, known as the Pioneer Co-operative Machine Works, and propose doing a general manufacturing business. The stock of this concern is taken up by members of the association.

Rev. Dr. Talmage is credited with saying: "One Sabbath night, in the vestibule of my church, a woman fell in convulsions. The doctor said she needed medicine not so much as something to eat. As she began to revive, in her delirium she said gaspingly: 'Eight cents! Eight cents! I wish I could get it done! I wish I could

get some sleep, but I must get it done! Eight cents!' We found afterwards that she was making garments at 8 cents apiece, and that she could make but three of them in a day. Hear it! Three times eight are 24! Hear it, men and women who have comfortable homes!"

According to the *Public Ledger* the Philadelphia Traction Company has discharged numerous conductors and motormen for alleged connection with the new Brotherhood of Trolley Car Employees. What occult influence can it be that leads men to sacrifice their positions, their homes, for a principle and yet allow them to remain in ignorance of the magic power of the ballot. Perhaps it has never occurred to the workmen of Pennsylvania that they could enact laws that would send corporation officials to prison for just such doings.

Judge Priest, of the United States Circuit Court, "was disqualified from setting in a case" at St. Louis which involved a dispute between a railway company and its employes "because he was a former railway attorney." Great Scott! If this rule is to be established, what is to become of all the other judges, governors, attorney generals, members of legislatures and of congress, and last, but not least, presidents? Appearances would indicate that unless a candidate is an ex-corporation attorney no political party will support him for such position.

Emperor William, of Germany, is having his sleep broken by thoughts of the growing democratic sentiment of the German people. The socialists in "fatherland" are nearly as demonstrative as were the subjects of George III, of England, when they threw the cargo of tea overboard in Boston harbor. His majesty would like to take the bull by the horns and stamp out independent sentiment, but he is afraid it is loaded. Chancellor Caprivi thought he saw "a cloud no larger than a man's hand" in the horizon, and wisely got in out of the weather.

It is doubtful if any of the great strikes of the recent years, from Homestead to Pullman, says the *Eight-Hour Herald*, would have taken place had public opinion been strong enough to compel both parties to the controversy to meet for an exchange of views. Now let workingmen, by their attendance at and interest in this matter, demonstrate their willingness to encourage rational methods. Past experiences teach us that when a great strike has been precipitated, it is then too late to talk of arbitration or conciliation. To be effective,

these measures must be popularized in times of industrial peace.

At the recent Indianapolis convention of the Brotherhood of Carpenters decisive action was taken, says *The Carpenter*, to secure the more general adoption of the eight hour working day among the carpenters in every town and city in every section of the entire country. It is to be pushed forward by incessant agitation, public discussion, thorough organization, and through conferences and consultations with contractors, builders and employers, so to avoid strikes or any possibilities of labor disturbances.

At their recent convention the Brotherhood of Railway Track Foremen enacted laws which admits to membership "all white railway trackmen who are sober, industrious and otherwise of good character, who have been engaged at track work for a period of at least one year and can read and write English." The B. of R. T. F. will hold biennial conventions in future and will meet two years hence at Louisville, Ky. The Grand Chief Foreman, James T. Wilson, in his annual report said: "The rise of the American Railway Union, which it was strenuously asserted was to prove a panacea for all the ills that afflict railway men, completely paralyzed the progress of young and conservative organizations such as ours. On May 17th last, a special circular letter was sent to all subordinate divisions of the brotherhood warning our membership of approaching danger, reciting that as one-third of the railway companies of the country were bankrupted and in the hands of receivers, with the whole country in the midst of a financial panic, while thousands of men were roaming in search of work, it was our duty to refrain from participating in any strike movement during the crisis, and if we would wait for the return of more prosperous times we would be more successful in our efforts to have our grievances adjusted. Despite any entreaties several of our subordinate divisions surrendered their charters and hundreds of members refused to pay dues and assessments, many sending in their certificates with the statement that the A. R. U. was the 'only' order. They were wild with excitement and lost sight of the fact that assessments are collected to pay the claims of widows and children and disabled brothers. They informed us it would be wasting money to pay their assessments to the Brotherhood. The new organization was going to enrich its entire membership, and they would have no further need for insurance." These same men now have no insurance, no protection, no job. See?

**OLNEY AND THE BROTHERHOODS.**

Since Judge Dallas has been so tardy in granting justice to the members of the Brotherhood of Railroad Trainmen who have protested against being discharged by the receivers of the Reading Railway because they were Brotherhood men, Attorney General Olney has made the following suggestion to the court:

**I.**

The material facts may be briefly stated. The petitioners are members of the Brotherhood of Railroad Trainmen. Some of them have been members for seven or eight years—have each year paid annual dues and assessments which now amount to considerable sums of money—and by continuing their membership, will, in case of death or permanent disability, become entitled by themselves or their representatives to large pecuniary payments from the funds of the brotherhood. On the other hand, by ceasing to be members, they lose all benefit from the assessments and dues already paid and forfeit all claim upon the brotherhood treasury.

The constitutions and rules of the brotherhood and of the subordinate lodges are before the court as part of the petition. No controversy or antagonism has ever arisen or existed between the Reading Railroad and the brotherhood or any of its lodges, or between the Reading Railroad and any members of the brotherhood as such members. If, as is claimed, the Reading Railroad has for some years adopted the rule that it would not have in its service any member of a labor organization, it is a rule which has not been uniformly nor invariably acted upon since there has been a Philadelphia lodge of the brotherhood on the Reading line for nearly eight years and its existence cannot have been unknown to the Reading officials. What has now happened and what has led to the present petition is this: The Reading receivers have notified the members of the brotherhood on its line that unless they cease to be such members, they will be discharged from their present employment on or before October 8th. The receivers make no complaint of the manner in which the brotherhood employees discharge their respective duties. The notice has been given simply because of such employees' membership of the brotherhood, as is conclusively shown by the following telegram received by Grand Master Wilkinson in reply to his remonstrance against the course proposed to be taken. "The policy of this company is well known to be that it will not consent that persons in its service shall owe allegiance to other organizations which may make claims upon

them which are incompatible with their duties to their employers. This position was taken advisedly and we have no intention of departing from it. (Signed) Joseph S. Harris, President and Receiver." Thus, if the receivers are right and their rule is to prevail, membership of the brotherhood by and of itself incapacitates for service on the Reading Railroad. It is respectfully submitted that the receivers are wrong and that the action proposed by them ought not to be sanctioned by the court.

**II.**

It will help to make plain the precise question before the court to note the opening words of the telegram just quoted. "The policy of the company is well known to be, etc., etc." Mr. Harris, who signs the telegram both as president and receiver, evidently forgets that the company is no longer in control—that it can have no present policy on the subject and that what its past policy was is of slight consequence.

The Reading Railroad being now in the hands of receivers the receivers and all the employees of the company are officers of the court. The court, therefore, and not the company, is the employer of all the persons engaged in the operation of the road. The present policy of the court—and not the past policy of the company—is the material thing to be considered. And hence the precise question is—will the court now lay the rule that members of the Brotherhood of Trainmen shall, because they are such members, be discharged from the service of the road?

**III.**

The court, it is submitted, ought not and cannot lay down any such rule on the ground that either the purposes and objects of the brotherhood, or the means by which they are to be attained, are shown to be illegal.

1. The general purposes and objects of the brotherhood are stated in the preamble to the constitution, as follows:

"To unite the railroad trainmen; to promote their general welfare and advance their interests, social, moral and intellectual; to protect their families by the exercise of a systematic benevolence, very needful in a calling so hazardous as ours, this fraternity has been organized.

"Persuaded that it is for the interests both of our members and their employers that a good understanding should at all times exist between the two, it will be the constant endeavor of this organization to establish mutual confidence and create and maintain harmonious relations.

"Such are the aims and purposes of the Brotherhood of Railroad Trainmen."

Certainly these objects must be regarded

as laudable in the highest degree and as deserving the approbation and support of every good citizen. They are indeed practically the same as those for which working people are expressly authorized to incorporate themselves by act of congress—the statutory description of such objects being “for the purpose of aiding its members to become more skillful and efficient workers, the promotion of their general intelligence, the elevation of their character, the regulation of their wages and their hours and conditions of labor, the protection of their individual rights in the prosecution of their trade or trades, the raising of funds for the benefit of sick, disabled, or unemployed members, of the families of deceased members, or for such other object or objects for which working people may lawfully combine, having in view their mutual protection or benefit.”

2. If the means to these praiseworthy ends be now examined, there is nothing in them to which the most captious critic can object except the provisions made for strikes.

It is well to note that even these provisions are of an eminently conservative character—that great care is taken to guard against the abuse of a weapon which is a two-edged sword and generally proves as damaging to those who use it as to those against whom it is used.

Thus, by the brotherhood constitution and rules, a strike does not take effect till approved *first* by the local grievance committee, *second* by the general grievance committee, *third* by a board of adjustment, and *fourth* by the Grand Master with the consent of two-thirds of the members involved—while striking or inciting to strike except in accordance with the above rules is punished by expulsion from the brotherhood.

3. Nevertheless, among the means of accomplishing the ends of the brotherhood is the bringing about of a “strike.” As what a “strike” is is not defined by the brotherhood constitution and rules, its precise nature must be determined by the court. And, as the brotherhood is entitled to the ordinary presumption of lawfulness for its methods as well as its objects until the contrary is shown, the court will hold the thing termed “strike” in the brotherhood constitution and rules to be something lawful unless there cannot be such a thing as a lawful “strike.”

4. But whatever may be the customary or probable incidents or accompaniments of a strike, it cannot be ruled that there is no such thing as a legal strike—that every strike must be unlawful.

The necessary elements of a strike are only three—(1) the quitting of work; (2) by concert between two or more; (3) sim-

ultaneously—and in and of themselves involve no taint of illegality.

A strike becomes illegal when, to these necessary features, are added others, such as a malicious intent followed by actual injury, intimidation, violence, the creation of a public nuisance, or a breach of the peace of any sort.

5. But it is unnecessary to elaborate the proposition that a strike is not necessarily unlawful since it is emphatically sustained by the recent decision of the Circuit Court of Appeals in *Farmers' Loan and Trust Co. vs. Northern Pacific R. R. Co.* just decided in Chicago. And it is hardly necessary to point out that the attending circumstances, which only too often makes strikes unlawful, are none of them provided for by the brotherhood constitution and rules and cannot therefore be assumed to be necessary incidents of any strike occurring pursuant to them.

#### IV.

If the rule that a member of the Brotherhood of Railroad Trainmen shall not work on the Reading Road cannot be justified because of anything inherently unlawful in the constitution and rules of the brotherhood, the only remaining ground on which it can be defended is that of business expediency.

That question is presented because in operating the Reading Railroad so as to secure the best results for the public and all private parties interested, the court is unhampered by any express statutory provisions and has all the liberty of choice belonging to employers generally.

It is conceivable, therefore, though the spectacle would be a curious one, that a court of the United States may, on business grounds, refuse employment to persons for no other reason than their membership of an association whose purposes the laws of the United States expressly sanction.

It is conceivable also that a court of the United States, also on business grounds, may attach to employment by its receivers a condition which employers of labor generally in very many states of the Union are prohibited from imposing under penalty of fine and imprisonment.

But it is safe to say that the consideration of business policy impelling the court to the course suggested should be of the clearest and most cogent character, and that the question presented is one which the court will recognize as of the greatest interest and importance.

It involves the right of labor to organize for the settlement of differences between it and capital whose right to organize is apparently not denied.

How the ordinary employer of labor may

answer such a question, whether mistakenly or otherwise, is of comparatively little consequence.

But, when the court is the employer, any mistaken decision may work infinite mischief both because until corrected it lays down a rule of action for other like cases and because so far as the mistake is recognized, it impairs the confidence of either the employer or the employed or both in the impartiality or capacity of the judiciary.

In considering the question of the business expediency of the employment of brotherhood men, such objection as there is to it must arise from the fact that under its constitution and rules the employees may engage in a strike—with all the natural and possible incidents and consequences. It can hardly be denied that, otherwise, the brotherhood organization is not only not objectionable but is salutary in its operation both as regards the employer and the employed. It is the strike feature and that alone which, from a business point of view, can induce the court to brand the brotherhood men as unfit for its service. It is submitted that that feature should not be allowed to have that effect for various reasons.

It should be remembered, in the first place, that the risks of a strike are not obviated by excluding the members of the brotherhood from the receivers' service. Men deeming themselves aggrieved and seeking relief or redress, though not associated in any formal way or for any general purposes may easily unite for the single purpose, of a strike. In that view, the brotherhood constitution and rules may well be regarded as operating in restraint of strikes. By compelling the question of strike or no strike to be acted upon affirmatively by four or five different and independent tribunals, they certainly tend to prohibit a strike that is rash, or reckless, or for other than weighty cause. Let it be borne in mind in the same connection that when a railroad or any other business concern is operated by receivers, the violence and lawlessness and other abuses of a strike are both less likely to develop than in other cases, and, if developed, are much more readily dealt with. Employees, who understand they are officers of the court, will be slow to antagonize its authority, and if they do, can be summarily controlled and punished through the process of contempt.

While, therefore, under the circumstances of the present case the possible evils of a strike would seem to be minimized, it should not be forgotten, in the second place, that the receivers' proposed remedy, to-wit, a rule excluding or discharging from service any and all members of the

brotherhood, is itself open to serious objections and disadvantages. The best service is not to be expected from employees who smart under a sense of injustice and are in a chronic state of discontent. Yet such is the inevitable condition of employees whose right to organize for mutual protection and benefit is attacked and whose opportunity to labor is conditioned upon the sacrifice of that right. They cannot help noting that organized capital is not so restricted. And when treatment so apparently unfair and discriminating is administered through the instrumentality of a court, the resulting discontent and resentment of employees are inevitably intensified because the law itself seems to have got wrong and in some unaccountable manner to have taken sides against them.

Thus, the mischiefs apprehended and membership of the brotherhood by the receivers' employees lies wholly in the future and are as small as it is possible in the nature of things, while the mischiefs to arise from enforcing the receivers' proposed rule are real and immediate. Whether and how far they may be regarded as offsetting one another need not be discussed. The rejection of the proposed rule may reasonably be expected to be attended with such substantial advantages that the court can hardly hesitate as to the course which sound business policy dictates.

To begin with, not the least of such advantages is the avoidance of the necessary invidious, if not illegal position that a man shall go without work unless he will give up a legal right—a right he may properly deem essential to his safety and welfare.

A correlative advantage is the conciliation of the employed through the full recognition of their rights and the clear indication of an honest purpose that no injustice to them is meditated.

Another advantage is the practical proof thus given that the greatest social problem of the day and the phase it has now assumed are fully appreciated. Whatever else may remain for the future to determine, it must now be regarded as substantially settled that the mass of wage earners can no longer be dealt with by capital as so many isolated units. The time has passed when the individual workman is called upon to pit his feeble single strength against the might of organized capital. Organized labor now confronts organized capital—they are best off when friends, but are inevitably often at variance—as antagonists neither can afford to despise the other—and the burning question of modern times is how shall the ever recurring controversies between them be adjusted and terminated. If the combatants are left to fight out their battles between themselves by the ordinary agencies, noth-

ing is more certain than that each will inflict incalculable injury upon the other while, whichever may triumph, will have won a victory only less disastrous and less regrettable than defeat.

No better mode for the settlement of contests between capital and labor has yet been devised or tried than arbitration, and another and crowning advantage of the course of action here advocated is that arbitration as the mode of settling differences between capital and labor must necessarily be applied in the course of the receivership, and arbitration in its best and most effective form. The court, by appointing receivers, constitutes itself not only an employer of labor but the arbitrator of all disputes between it and the receivers who may justly be regarded as representatives of capital. It occupies the dual capacity of employer and arbitrator naturally and inevitably. It is an arbitrator whose wisdom and impartiality are—certainly should be and must be assumed to be—beyond suspicion. It is an arbitrator capable of acting rapidly and summarily, if need be, and invested with power to enforce its own awards. It is an arbitrator with whom both parties have reason to be as satisfied both from its character and its ability to make its award effective, and might well be expected to furnish, should circumstances permit or require, a conspicuous object lesson illustrative of the value of the arbitration principle.

In short, the question being whether business policy requires the court to approve the rule that a member of the Brotherhood of Railroad Trainmen is *ipso facto* ineligible as an employee of the receivers of the Reading Railroad and an officer of the court, the conclusive considerations against the rule may be summed up as follows:

1. The rule is of doubtful value as a preventive of strikes because it leaves employees to act upon impulse and from passion and freed from the restraints of the brotherhood regulations.

2. The rule is of doubtful value when the court is the real employer both from the reluctance of the employed to defy the court's authority and from the power of the latter to speedily and summarily vindicate it.

3. The rule is of positively injurious tendency in the disaffection and discontent engendered among employees by the denial to them of rights enjoyed by citizens generally and deemed necessary for their security and comfort.

4. The repudiation of the rule, on the other hand, has the positive merit.

- (a). Of tending to secure for the service the good will of employees and thus promoting its efficiency.

- (b). Of recognizing the real conditions

of the capital and labor problem and the fact that labor both has the right to organize and is organized.

- (c) Of illustrating the working under the most favorable auspices of the principle of arbitration as the means of adjusting the differences between capital and labor.

- (d). Of demonstrating that there is not one law for one class of the community and another for another, but the same for all, and of thus tending to preserve for the law and for the judiciary by which it is administered that general respect and confidence which have always been a marked characteristic as well as excellence of our institutions.

(Signed),

Richard Olney.

#### MR. W. E. BROKAW.

In the "Brotherhood" department a letter is published from Mr. W. E. Brokaw, editor of the *Single Tax Courier*, in reply to an article in the November MAGAZINE. Mr. Brokaw's original article was lost in transmission to this office and the present letter did not arrive until after other forms had gone to press, therefore it appears among the correspondence. The December issue will close all personal discussions, but brief, well written essays on all economic questions will receive due attention.

#### ANN ARBOR RICKS.

According to press reports, the senate will be engaged in an impeachment trial soon after the holidays. The committee conducting the investigation of the charges against Judge Ricks, United States District Judge of the Northern District of Ohio, have finished taking testimony, and to-day, returned to Washington. The newspaper reports of the testimony taken by the committee at Cleveland indicate damaging testimony against Judge Ricks. The defense will be allowed some time for the further presentation of their case in writing, but the expectation is that the committee report, which will be prepared by Representative Bailey, of Texas, will be ready before the holiday recess is taken. The report will be first acted on by the house judiciary committee. It is not thought that they will consume much time in consideration of the case, as the testimony will be all before them, and is said to be of a character not to excite much doubt. It is believed that a resolution of impeachment will be reported promptly by the committee, and that the case will be sent to the senate for trial.

It is not often that the senate is called upon to act in its judicial capacity on impeachment, and the case will probably be one of considerable interest. The charges grow out of alleged illegal collection of fees by Judge Ricks.

## JUDICIAL DECISIONS.

## REDUCTION OF WAGES BY RECEIVERS.

The court, in its discretion, will consider an application by railroad employees to rescind an order of the receiver reducing wages.

Thomas vs. Cincinnati, N. O. & T. P. Ry. Co. (Circuit Court, S. D. Ohio, W. D.) 62 Fed. Rep. 609. (26)

## ASSUMPTION OF RISK BY SERVANT.

Where a servant, with knowledge of a defect in the master's premises, continues in his service, without proper notice to the latter, he assumes the risk of injuries growing out of such defect.

Texas & Pacific Ry. Co. vs. Bryant. (Court of Civil Appeals of Texas.) 27 S. W. Rep. 825. (38).

The Supreme Court of Texas holds that a section foreman, with authority to employ and discharge hands, is not a fellow servant of those under his control; and it is immaterial that he derived such authority only from the roadmaster.

Ft. Worth & D. C. Ry. Co. vs. Peters. (27 S. W. Rep. 257.) (40).

## LOCATION OF PROPERTY INSURED.

Where property is insured "while" in a certain building, the insured cannot recover in case it is destroyed at another place, though it was then in its "ordinary, necessary, and convenient use."

Green vs. Liverpool & London & Globe Insurance Co. (Supreme Court of Iowa.) 60 N. W. Rep. 189. (36).

## LIABILITY FOR DEATH OF EMPLOYEE.

In an action against a railroad company for the death of an employee, evidence that he could have been seen in time to avoid running over him, and that the engineer was probably asleep, is sufficient to sustain a verdict of negligence.

Craft vs. Northern Pas. R. Co. (Circuit Court, D. Oregon.) 62 Fed. Rep. 735. (47).

## INSURANCE—PAROL EVIDENCE AS TO TERMS OF CONTRACT FOR INSURANCE.

Where, in pursuance of an oral contract to insure, a policy is issued and received by the insured, which is void for non-compliance with the statutory form, it will be presumed that the terms of the oral contract were the same as those in the written policy.

Green vs. Liverpool & London & Globe Insurance Co. (Supreme Court of Iowa.) 60 N. W. Rep. 189. (36).

## LIABILITY FOR NEGLIGENCE OF FELLOW SERVANT.

Where a servant, who has knowledge of the incompetency of a fellow servant, continues to work with him, without complaint to the master, the latter is not liable to the servant for injuries caused by the fellow servant's negligence, though he was negligent in retaining the fellow servant in his employ.

McCharles vs. Horn Silver Mining & Smelting Co. (Supreme Court of Utah.) 37 Pac. Rep. 793. (57).

## LIABILITY TO THIRD PERSONS FOR WANTON AND MALICIOUS ACTS OF SERVANTS.

The wanton and malicious use of the steam whistle of a locomotive by servants of a railroad company who are in charge of the locomotive while it is in motion on a regular or authorized run, is an act within the scope of their employment, so far as to charge the company with liability for injuries caused thereby.

Texas & P. Ry. Co. vs. Seville. (Circuit Court of Appeals, Fifth Circuit.) 62 Fed. Rep. 730. (67).

## TRANSFER BY INDORSEMENT WILL NOT PASS TITLE.

While the transfer of negotiable promissory notes secured by an absolute conveyance of land made under the statutes, although the transfer be made by indorsement of the payee without recourse upon him, will not discharge the land from the incumbrance placed upon it by the deed, yet a mere written transfer, indorsed upon the deed, of the deed itself and the rights of the grantee therein (the payee of the note) will not pass title to the land out of him, and into the indorsee of the notes, so as to enable the latter to convey the land back to the debtor who executed the deed to secure the notes. Consequently, under such circumstances, verdict in a suit upon the notes, and judgment, should not find and declare unconditionally that the plaintiff has or shall have a special lien

on the land for the payment of the judgment, but only that he shall have such lien provided he shall procure a proper conveyance to be made by the grantee in the security deed conformably to his bond for titles, and have the same duly filed and recorded before causing the land to be levied upon.

Henry vs. McAllister. (Supreme Court of Georgia.) 20 S. E. Rep. 66. (26).

## LIABILITY FOR INJURY TO RAILROAD EMPLOYEE.

The failure of a railroad company to securely fasten the ends of a car which are on hinges, so as to allow the car to be used as a flat car by dropping the ends inward, is not negligence, so as to render the company liable to a brakeman, who in getting off the car, is thrown beneath the wheels by reason of the end falling in, he having used it as a support.

Graham vs. Chicago, St. P. M. & O. Ry. Co. (Circuit Court, D. Minnesota, Second Division.) 62 Fed. Rep. 896. (40).

## INJUNCTION REQUIRING PERFORMANCE OF DUTY BY EMPLOYEES.

Where employees of a railroad company, though remaining in its employment, refuse to perform their duties of operating its trains so long as Pullman cars are hauled, though the company is bound by contract to carry them, thus interrupting interstate commerce and the transmission of mails, and subjecting the company to suits and great irreparable damage, injunction will issue requiring them to perform their duties during their continuance in the company's employment.

Southern California Ry. Co. vs. Rutherford. (Circuit Court, S. D. California.) 62 Fed. Rep. 796. (40).

## CONTRIBUTORY NEGLIGENCE BY RIDING ON BRAKE BEAM.

It is negligence for a brakeman, contrary to the rules of a railway company, to ride on the brake beam of a tender of an ordinary locomotive backing across a trestle at the rate of from five to eight miles an hour; and if, while so riding, he is struck by a gate which is allowed to swing across the track, he cannot recover. The negligence of an employee in going into a dangerous place, contrary to the rules of his employer, will not be excused because it was customary for other employees to go into the same place.

Benage vs. Lake Shore & Michigan Southern Ry. Co. (Supreme Court of Michigan.) 60 N. W. Rep. 286. (40).

## LIABILITY FOR VIOLATION OF ORDINANCE.

Where a valid municipal ordinance, broad enough to cover the running of locomotives in yards of railroad companies within the city, limits the speed to five miles an hour, it is negligence by itself, relatively to employees whose duty requires them to cross or be upon the tracks within these yards, to violate the ordinance by running at a higher speed. If such violation caused the death of an employee, and if he was not at fault, and could not by ordinary care and diligence, have avoided the consequences to himself which resulted from such violation, his widow would under the statute applicable to negligent homicide, be entitled to recover.

Central Railroad & Banking Co. vs. Brantley. (Supreme Court of Georgia.) 20 S. E. Rep. 98. (47).

## LIABILITY OF COMPANY FOR INJURY TO EMPLOYEE.

Although the coming apart of the train, and the running back of a portion of it, may have been the result of the engineer's negligence, and have made it necessary for the conductor to go back and flag an approaching train, yet, as the immediate and proximate cause of his injury was his slipping and falling upon a cross-tie forming a part of a trestle, the injury was a mere casualty incident to the business in which he was engaged, and he was not entitled to recover. This is true, although there was upon the head of the cross-tie a small bit of decayed sap, the breaking of which from the tie itself caused his fall. There was no negligence of the company, relative to the conductor, in having a defective cross-tie, the purpose of having ties not being to make a way for employees to walk upon, but to make a safe road-bed for the running of trains.

East Tenn., V. & G. Ry. Co. vs. Reynolds. (Supreme Court of Georgia.) 20 S. E. Rep. 70. (46).

## CONSPIRACY IN OBSTRUCTION OF INTERSTATE COMMERCE.

A railroad which is a link in a through line of road by which passengers and freight are carried into a state from other states and thence to other states, is engaged in interstate commerce, within the statute declaring every combination or conspiracy in restraint of such commerce to be an offense. Though a railroad engaged in interstate commerce must, unless prevented by circumstances beyond its control, run trains in a reasonable manner, and as often as the ordinary business of commerce requires, yet, where the composition of its trains, as ordinarily made up, is reasonable and appropriate to the service required, it is not obliged, on the refusal of its employees to move the trains so long as certain cars are thereon, to leave off such cars, and run the rest of the train. Where the regular passenger trains of a railroad have been designated for the carrying of mail, failure of the railroad to run other trains for that purpose is not in violation of the statute against obstruction and interruption of the mail.

In re. Charge to grand jury. (District Court, S. D. California.) 62 Fed. Rep. 334. (183).

## CONTEMPT FOR INTERFERENCE WITH RECEIVER—IMPEDING OPERATION OF RAILROAD.

Any willful attempt, with knowledge that a railroad is in the hands of the court, to prevent or impede the receiver thereof, appointed by the court, from complying with the order of the court in running the road, which is unlawful, and which, as between private individuals, would give a right of action for damages, is a contempt of the order of the court.

Maliciously inciting employees of a receiver, who is operating a railroad under order of the court, to leave his employ, in pursuance of an unlawful combination to prevent the operation of the road, thereby inflicting injuries on its business, for which damages would be recoverable if it were operated by a private corporation, is a contempt of the court.

Such inciting to carry out an unlawful conspiracy is not protected by constitutional guaranties of the right of assembly and free speech, and is not less a contempt because effected by words only, if the obstruction to the operation of the road by the receiver is unlawful and malicious.

A combination to inflict pecuniary injury on the owner of cars, operated by railway companies under contracts with him, by compelling them to give up using his cars, in violation of their contracts, and, on their refusal, to inflict pecuniary injury on them by inciting their employees to quit their service, and thus paralyze their business, the existence of the contracts being known to the parties so combining, is an unlawful conspiracy.

A combination by employees of railway companies to injure in his business the owner of cars operated by the companies, by compelling them to cease using his cars by threats of quitting and by actually quitting their service, thereby inflicting on them great injury, where the relation between him and the companies is mutually profitable, and has no effect whatever on the character or reward of the services of the employees so combining, is a boycott, and an unlawful conspiracy at common law.

A combination to incite the employees of all the railways in the country to suddenly quit their service, without any dissatisfaction with the terms of their employment, thus paralyzing utterly all railway traffic, in order to starve the railroad companies and the public into compelling an owner of cars used in operating the roads to pay his employees more wages, they having no lawful right so to compel him, is an unlawful conspiracy by reason of its purpose, whether such purpose is effected by means usually lawful or otherwise.

Such combination, its purpose being to paralyze the interstate commerce of the country, is an unlawful conspiracy, within the act of July 2, 1890, declaring illegal every contract, combination, or conspiracy in restraint of trade or commerce among the several states.

Such combination, where the members intend to stop all mail trains as well as other trains, and do delay many, in violation of revised statutes, Sec. 3995, punishing any one wilfully and knowingly obstruct-

ing or retarding the passage of the mails, is an unlawful conspiracy, although the obstruction is effected by merely quitting employment.

Thomas vs. Cincinnati N. O. & T. P. Co. (Circuit Court, S. D. Ohio, W. D.) 62 Fed. Rep. 803. (541).

## Our New Advertisers.

We wish our readers to give particular consideration to the advertisements that appear for the first time with this issue. We should not forget that wise doctrine of patronizing those who patronize us. Among the new advertisements there will be found that of D. Van Nostrand Co., of New York, publishers of useful books on mechanics that should be of special interest to firemen. Also the "Breadwinner Overalls" advertised by O. L. Hinds Co., of New York, who propose to sell on such liberal terms of trial and return if not satisfactory as to stamp this a fair dealing and reliable concern. Cornish & Co. is well and favorably known by many of our readers as makers of pianos and organs which they sell at low figures and on easy terms. The Homes & Hearsh Co. offer special holiday bargains in watches which should be taken advantage of during the approaching Christmas tide.

WHAT T. V. POWDERLY SAYS: Many of our readers may have noticed that the noted ex labor leader, T. V. Powderly, has been admitted to practice law, and it will be of general interest to know that Mr. Powderly derived his knowledge of the law from a course of home study as mapped out by the Sprague Correspondent School of Law, Detroit, Michigan.

Their advertisement appears elsewhere. Many of our readers are so situated that they could give a number of hours daily to such study, fitting them either for the practice of law or for general culture and information. The school referred to has some three thousand students located in every portion of the United States, and in some foreign countries, and has the endorsement of the leading educators, and is strictly first-class in every way. They will be glad to send full particulars to anyone asking them.

Attention is called to the unusual offer made by the watch department of the Homes & Hearsh Co., New York, in this issue. We have seen the calendar watch advertisement, and believe it to be an excellent thing. Do not fail to read the advertisement, and avail yourself of the opportunity.

THE Joint Committee of the Master Car Builders' Association and the Master Mechanics' Association have decided on Thousand Islands, Alexandria Bay, New York, as the place for the next convention of these two organizations in June, 1895.

## THE BROTHERHOOD.

### GRAND EXECUTIVE BOARD.

The fourth biennial convention, by resolution, instructed the Grand Master and Grand Secretary and Treasurer to collect data and statistics relative to the probable cost to members carrying the different grades of insurance, and that when sufficient information to insure intelligent action had been gathered, the Grand Executive Board should be convened, and they, in conjunction with the Grand Master and Grand Secretary and Treasurer, should constitute a committee to incorporate such amendments and make such alterations in the laws of the beneficiary department as were deemed necessary to conform to the graduated system of insurance, such amendments and alterations when approved by a majority of said committee to become laws, binding and in full force from January 1st, 1895.

The Grand Master was also instructed to enter into communication with different cities and ascertain what advantages such cities had to offer for the location of the Grand Lodge offices; and that when the Executive Board met to decide the rate of assessment for the different grades of insurance, he should submit the several proposals and various inducements offered to them, and they, acting jointly with the Grand Master and Grand Secretary and Treasurer, should select such city as in their judgment would be to the best interests of the Brotherhood.

In compliance with these instructions, the Grand Executive Board was convened in the city of Terre Haute, Ind., Monday, November 19, 1894, at 9 A. M., and at once proceeded to business.

Amendments to beneficiary laws were introduced, discussed, modified, altered and adopted. Circulars containing the new rate of assessment have been sent to all subordinate lodges. The new and amended sections are published in full in this issue, and will appear in the Constitution and By Laws to take effect January 1st, 1895.

The Grand Master laid before the committee a vast amount of correspondence

from the various cities he had communicated with relative to the location of Grand Lodge headquarters, containing information, bids, proposals, statistics, plans and photographs of buildings considered available for office use. In all twenty-one cities replied, and invited the committee to consider the advantages they possessed as to the accessibility from different points of the compass, facilities for transportation, mailing and telegraph service, splendid office buildings, cheap rents, substantial banks willing to pay reasonable interest on daily balances, and first class printing establishments fully capable of handling the MAGAZINE and other printing, at moderate rates. Each city's propositions were read, tabulated and filed, separately. The claims of each were carefully weighed and comparisons drawn. The geographical location of competing cities being of vital importance, the committee deemed it wise to place the headquarters as near the center of membership in the order as possible, provided it could be accomplished without too great a sacrifice, the situation of everyone was kept well in sight. Committees from the board of trade and chambers of commerce and citizens of the following municipalities came to Terre Haute in person and stated in earnest language the inducements they had to offer: Indianapolis, Cleveland, Peoria, Evansville, Rochester, N. Y., and Fort Dodge, Iowa. A committee from the common council of the city of Terre Haute presented a series of resolutions protesting against our removal from their city, and were told the reasons that actuated the Brotherhood in seeking a new location. That it was a matter of dollars and cents, wholly devoid of sentiment or prejudice. That the Brotherhood believed it could secure better facilities and more economically conduct its affairs elsewhere.

At the urgent solicitation of the mayors and boards of trade the committee visited the cities of Indianapolis, Evansville, Peoria, Cleveland and Cincinnati and made a personal investigation of the office buildings deemed available, inquired into the stability of the banks and the capability and responsibility of the printing establishments. After careful deliberation and minute comparison of all propositions submitted, the committee by ballot selected

the city of Peoria, Illinois, for permanent headquarters.

Contrasting the propositions received from Peoria for printing the MAGAZINE, office rent and interest on daily balances with the expense account for these three items in Terre Haute the past year, and a reduction of \$9,252 in the annual expense account is effected.

In addition, the Grand Lodge has a large amount of job work, or contingent printing, done each year; taking the amount saved on the MAGAZINE as a criterion, it is safe to presume that a large reduction can be effected in this expense also, thus enabling the Grand Lodge to furnish supplies to subordinate lodges much cheaper than heretofore.

In concluding this report, I wish to call the attention of the membership to the fact that in 1884, at the Toronto convention, an effort was made to have headquarters moved from Terre Haute and located in some larger city where competition was keener, with a view to securing cheaper rates on printing and interest on our funds. The effort has been repeated in succeeding conventions, but has been as repeatedly defeated and its advocates maligned. It is safe to presume that had the effort succeeded then, as it did at Harrisburg, placing a very conservative estimate on the annual amount saved, the Brotherhood would be at least \$50,000.00 ahead on its expense account.

The Brotherhood first saw the light of day on December 1, 1873, and perhaps it is but fitting and memorable that upon its twenty-first anniversary it should assert its manhood by casting off ties that have cost it so many thousands of hard earned dollars.

About the close of our session a proposition was received from the business men of Terre Haute which would reduce expenses from the figure of 1894 on rent, printing of MAGAZINE and interest on daily balances \$6,998.67, but even this proposition, favorable and unexpected as it is, still leaves Terre Haute \$2,253.30 higher than Peoria on annual expense.

Respectfully submitted,

T. P. O'ROURKE,

Secretary Grand Executive Board.

DECEMBER, 1ST, 1894.

#### The New Beneficiary Law.

The following are the articles of the constitution of the Brotherhood of Locomotive Firemen relating to the Beneficiary Department adopted at the Fourth Biennial Convention and go into effect on January 1st, 1895.

#### BENEFICIARY DEPARTMENT.

SEC. 47. The beneficiary department of this order, established to provide substantial relief to members and their families in

the event of death or total disability, shall be known as the Beneficiary Department of the Brotherhood of Locomotive Firemen.

#### ALL MEMBERS TO PARTICIPATE.

SEC. 48. All members shall be required to participate in the beneficiary department, subject to the laws, rules and regulations by which it is now, or may be hereafter, governed, except such members as may have failed to pass the required medical examination.

#### APPLICATION FOR BENEFICIARY CERTIFICATE.

SEC. 49. A candidate for admission shall, at the time of applying for membership, make application for a beneficiary certificate, in substance, as follows:

I, . . . . ., desiring to make application for membership in . . . . . Lodge, No . . . . . of the Brotherhood of Locomotive Firemen, hereby agree to comply with all the laws, usages and regulations of the order, and those that may be hereafter enacted, as the condition upon which I am to be entitled to participate in the beneficiary department to the amount of . . . . . dollars and receive the other rights, privileges and benefits of the order. I certify that the answers made by me to the questions propounded by the Medical Examiner, which are attached to this application, are true in every particular. I hereby authorize that the amount of said beneficiary certificate, in the event of my death, shall be paid to . . . . ., whose relation to me is that of . . . . . and whose residence is . . . . .

Applicant.

Attest . . . . ., Secretary.

#### FORM OF BENEFICIARY CERTIFICATE.

SEC. 50. Upon the admission of a beneficiary member, the Grand Lodge shall issue to him a beneficiary certificate in the following form:

This certificate, issued by the Grand Lodge of the Brotherhood of Locomotive Firemen, witnesseth: That Brother . . . . ., a member of . . . . . Lodge, No . . . . . of said order, located at . . . . . is entitled to all the rights, privileges and benefits of membership and to participate in the beneficiary department to the amount of . . . . . dollars, immediately on the issuance of this certificate, which amount, in the event of his total disability, shall be paid to him or at his death shall be paid to . . . . . his . . . . ., whose residence is . . . . .

This certificate is issued on condition that said . . . . . shall comply with all the laws, rules and regulations of the order while a member of the same; otherwise this certificate shall be cancelled and become null and void.

In witness whereof, the Grand Lodge of

the Brotherhood of Locomotive Firemen has caused this certificate to be signed by its Grand Master and Grand Secretary and Treasurer, and the seal thereof to be attached, this . . . day of . . . , one thousand, eight hundred and . . .

[SEAL] . . . . . Grand Master.

Grand Secretary and Treasurer.

We, the undersigned, Master and Secretary of . . . . . Lodge, No . . . , do hereby countersign and attach the seal of this lodge hereunto, this . . . day of . . . 189 . . .

[SEAL] . . . . . Master,  
 . . . . . Secretary.

AMOUNT OF BENEFICIARY CERTIFICATE.

SEC. 51. Upon the death of a beneficiary member in good standing, the person or persons named in the beneficiary certificate of the deceased member shall be entitled to receive from the beneficiary fund of the order the sum mentioned in the beneficiary certificate issued from the Grand Lodge office as determined by his application for the same and the records of the Grand Lodge; and in the event of the total disability of a beneficiary member in good standing he shall be entitled to receive a like amount under like conditions, provided, said deceased or disabled member shall have complied with all the laws and requirements of the order.

ASSESSMENTS, HOW LEVIED AND WHEN PAYABLE.

SEC. 52. All assessments levied by the Grand Lodge for the beneficiary department shall be in the sum of two dollars (\$2.00) for each member who shall carry a beneficiary certificate amounting to fifteen hundred dollars; and in the sum of one dollar and fifty cents (\$1.50) for each member who shall carry a beneficiary certificate amounting to one thousand dollars; and in the sum of seventy-five cents (\$0.75) for each member who shall carry a beneficiary certificate amounting to five hundred dollars, such assessments to be levied as often as may be required to meet outstanding claims. All such assessments shall be levied on the first day of each month, and shall be remitted by subordinate lodges so as to reach the Grand Lodge on or before the twentieth (20th) day of the month in which they are levied.

ASSESSMENTS, HOW COLLECTED, DUTY OF COLLECTOR.

SEC. 53. The collector shall collect all dues provided for in this department and shall deliver the same to the receiver of the lodge on or before the fifth (5th) day of each quarter, together with a statement showing the names of members with the amount

paid opposite their respective names; provided the collector shall not receive from any member less than the full amount due for the quarter.

TOTAL DISABILITY.

SEC. 61. A beneficiary member in good standing becoming totally blind, or sustaining the loss of a hand at or above the wrist joint, or a foot at or above the ankle joint, shall be entitled to the full amount of his beneficiary certificate upon the proper proof of such disability as hereinafter provided. It shall be the duty of the Secretary of the lodge of which he is a member to immediately make a statement thereof, under seal of the lodge. When disability is produced by injury, the date of said injury shall be stated, and when caused by sickness, the date of first sickness shall be stated, together with the date and cause of disability. There shall also be issued a certificate of disability by the attending physician, with affidavit attached, which shall set forth the date of injury or first sickness and the date and cause of disability. The Secretary shall also secure the receipts of the disabled member, covering the period from date of injury or first sickness to date of disability. These receipts shall include all dues and assessments, and in case the original receipts can not be found, the Collector shall issue duplicates of the same, provided that each receipt bears the exact date upon which payment was made. The Collector shall also issue a statement under seal of the lodge; certifying to the good standing of the said member at the time of his disability. The Secretary shall forward these statements and receipts, together with the beneficiary certificate of the disabled member, to the Grand Secretary and Treasurer, who shall thereupon, if the claim be valid, adjust the same in its regular order. If an applicant for a disability claim is at a distance from his lodge, the examining physicians may be appointed by the Grand Master and Grand Secretary and Treasurer.

NOTE.—The fourth biennial convention adopted the following as a standard in passing upon claims for total disability on account of defective vision: That when a member has less than 15-200 vision in each eye when sight is in both eyes, or when he has but one eye, 15-100 vision it shall be considered total blindness.

HOW CLAIMS ARE ESTABLISHED.

SEC. 62. A beneficiary member in good standing who shall be totally and permanently incapacitated from performing manual labor from consumption, Bright's disease of the kidneys, or total and permanent paralysis, shall be entitled to the full amount of his beneficiary certificate, provided that all claims arising under the provisions of this section shall be referred to the Grand Lodge officers who shall make a

personal investigation thereof, employing such physicians as in their judgment may be necessary to determine the validity of the same; all expenses incurred to be paid by the claimant unless assumed by the lodge of which he is a member.

#### CLAIMANTS TO PAY DUES.

SEC. 63. A beneficiary member petitioning for a total disability claim shall not be exempt from dues or assessments until his claim is regularly allowed by the Grand Lodge. His standing shall be kept good, without intermission, otherwise the beneficiary certificate of said member shall be cancelled as in all other cases. Provided, that when an application for a claim is based on disabilities as specified in Section 61, the applicant shall be relieved from the payment of all dues and assessments from date of such disability.

SEC. 64. All receipts issued by the Collector shall bear the exact date of payment.

#### ADJUSTMENT OF CLAIMS.

SEC. 65. Upon receiving official notice of the death or total disability of a member in good standing, the Grand Secretary and Treasurer shall adjust the claim and shall notify the beneficiary to appoint a person with a power of attorney to collect the amount from the Grand Secretary and Treasurer. As soon as the Grand Secretary and Treasurer receives proper notification of the appointment of the said person properly empowered, he shall, by way of settlement, draw an order on the beneficiary fund for the amount, and have a draft issued in favor of said party or parties entitled thereto, which he shall forward to the said person holding the said power of attorney. Upon receiving the said draft the person holding the power of attorney shall execute a full and proper receipt and forward the same to the Grand Lodge.

#### DUTIES OF COLLECTOR.

SEC. 107. It shall be the duty of the Collector to keep a full and correct account between the lodge and each member, receive all moneys due the lodge, paying the same to the Receiver on or before the 5th day of each month (except quarterly dues), taking his receipt therefor. He shall issue to the lodge a quarterly report of all moneys received by him, amount paid to Receiver, balance on hand, if any, and all other matters pertaining to his office, which report when properly endorsed by the board of trustees, shall be filed with the Secretary and read at the first regular meeting of the lodge in each of the months of July, October, January and June. He may appoint such deputies as he may require, subject to the approval of the lodge, and when thus approved they shall be duly authorized to receive and receipt for moneys due the lodge. All receipts issued by the Collector shall

bear the exact date of payment, and in no case shall a receipt be dated previous to the date of payment. He shall give such a bond as the lodge may require for the faithful performance of his duties; he shall perform all duties required of him in the beneficiary department, and at the close of his term he shall make an annual report to the Grand Lodge, in the prescribed form, of all his official acts during the year, and surrender all books, papers, accounts and moneys on hand to his successor, when duly elected and qualified.

#### QUARTERLY DUES.

SEC. 132. The dues of a member of a subordinate lodge who shall carry a beneficiary certificate of fifteen hundred dollars shall be such an amount as may be determined by the lodge, provided that in no case shall they be less than four dollars and fifty cents (\$4.50) per quarter, payable in advance.

SEC. 133. The dues of a member of a subordinate lodge who shall carry a beneficiary certificate of one thousand dollars shall be of such an amount as may be determined by the lodge, provided that in no case shall they be less than three dollars and fifty cents (\$3.50) per quarter, payable in advance.

SEC. 134. The dues of a member of a subordinate lodge who shall carry a beneficiary certificate of five hundred dollars shall be of such an amount as may be determined by the lodge, provided that in no case shall they be less than two dollars (\$2.00) per quarter, payable in advance.

#### WHEN PAYABLE.

SEC. 135. On or before the first day of July, the first day of October, the first day of January and the first day of April of each year each member shall pay to the Collector of the lodge the amount of his dues for the next ensuing quarter, provided, that members admitted during the last two months in each quarter shall be exempt from dues for said quarter.

#### INCREASE OF POLICY.

SEC. 136. A member who shall decrease the amount of his beneficiary certificate shall not be required to undergo a medical examination, provided he shall be in good financial standing at the time of his application for a decreased beneficiary certificate, but a member who shall apply for an increase in the amount of his beneficiary certificate must undergo a medical examination showing that he is in good, sound, physical health, or the increased amount will not be granted. No member shall be permitted to change the amount of his beneficiary certificate except prior to the beginning of the quarter, and provided that not less than thirty (30) days' notice be given to the Secretary of his lodge of the proposed change.

## A NEW ORGANIZATION.

The Switchmen's Union of North America is Established.

Pursuant to call, the switchmen of America met in Kansas City to re-organize in such manner as would be conducive to the benefit of all concerned, says an exchange. Due deliberations upon subjects of vital importance were considered and the following is a brief digest of one of the hardest worked body of men that ever met in the United States. They transacted their business with firmness and dispatch, and that a grand outlook for the future of this organization is pre-eminent goes without saying.

In many points the new constitution is radically different from that of the old Switchmen's Mutual Aid Association, which was dissolved last summer. The insurance system which marked the old constitution and was obligatory upon every member of the association has no place in the constitution of the new union. It is provided, however, that every lodge in the body shall see to it that its members who become disabled shall be provided for, but the amount to be paid each week to each disabled switchman or his family is to be optional with the lodge. Provision is made for a national grievance committee, ordinary grievances are to be settled by the members of the local unions. The secretary-treasurer of the union is to be placed under a \$10,000 bond as soon as he assumes office.

The board of grand directors must, under the constitution, examine the books and audit the accounts of the grand treasurer every three months during his two years' term of office. The unions' organizers are to be appointed by the grand master. The union pledges itself to pay the claims against the old association which was wrecked by Simsrrott, and thus free from want and distress the hundreds of families of switchmen who were insured in it. These claims aggregate \$33,559, the amount embezzled by Simsrrott. One of the chief reasons why the beneficiary system was discarded is that expenses shall be less and these claims met. It is intended that the freedom from assessments shall be an incentive to switchmen to join the organization for the protection of their craft, while at the same time they will be free to join whatever outside benevolent and protective orders they choose.

The following officers were elected:

Grand Master, D. D. Sweeney, of Jersey City, N. J.; Vice Grand Master, M. R. Conlin, of Kansas City, Kansas; Grand Secretary and Treasurer, John Dougherty, of St. Louis, Mo.

The Board of Directors consists of M. R. Welch, of Omaha, Neb.; H. C. Nelson, of Kansas City, Mo., and F. D. Wartinbee,

of LaCrosse, Wis. These six are to hold office for two years. The next convention will be held in Omaha, Neb., on the second Monday in October, 1895.

The convention adopted the Corey car coupler. The delegates were highly pleased with the treatment they received at the hands of the local switchmen during their stay in that city.

The convention was called to order Monday evening and concluded Wednesday evening at 6:30. Delegates from all parts of the country, representing 4,000 switchmen, were present.

It was voted to call the new organization "The Switchmen's Union of North America," and to establish the national headquarters in Kansas City.

## Joint Protective Boards.

The secretaries of all Joint Protective Boards who have not already corresponded with this office on the subject will please send in the names of the chairman and secretary of each Joint Protective Board on or before the 10th day of January, 1895, so that a correct directory can be published in the February number.

## Justice Appreciated.

At a regular meeting of Welcome Lodge No. 72, B. of L. F., at Camden, N. J., held Sunday, November 11th, 1894, the following resolutions were adopted:

WHEREAS, Mr. Richard Olney, as attorney general of the United States of America, has taken a position in favor of, and delivered an opinion upholding organized labor, in the case of the B. of R. T. against the Reading Railroad; therefore, be it

Resolved, That we, as members of Welcome Lodge No. 72, B. of L. F., express to him, through our Grand Lodge officers, our appreciation, and also extend to him a vote of thanks for his just and upright interpretation of the laws governing this case.

Resolved, That a copy of these resolutions be forwarded to Mr. Richard Olney, attorney general of the United States, and also printed in the B. of L. F. MAGAZINE, and entered upon the minutes of Welcome Lodge No. 72, B. of L. F.

## Addresses Wanted.

G. FLINN.—Brother U. H. Simpson, of 219, desires the address of Mr. G. Flinn, formerly of Allegheny, Pa., and at one time a member of the B. of L. F.

THOS. B. CUBBINS.—Information wanted as to the whereabouts of Thos. B. Cubbins. Was last heard from in Yucatan; is a locomotive engineer and fireman; about six feet high, slightly stoop-shouldered; dark complexioned, with very black hair and moustache; aged 35 years. Any person having knowledge of his whereabouts or having seen him within the last three years will confer a favor by addressing his brother, J. F. Cubbins, North Second street, Memphis, Tenn.

JAMES MILLET.—Mr. James Millet, Sr., of Zouetouh, Ky., would gladly receive any information from his only son, James Millet, who was running an engine when last heard from, three years ago, on the Mexican Central at San Luis Potosi, Mexico.

## CORRESPONDENCE.

TO CORRESPONDENTS.—Brief, newsy letters are desired upon subjects of general interest. Sign name and *nom de plume*, the latter for publication.

## That Editorial.

MR. EDITOR:—Last summer, and again in the November MAGAZINE, W. H. Stuart charged that, "in an editorial in the *Standard* Mr. George had defended 'Old Hutch' in his famous 'corner' on wheat in Chicago a few years ago, that such men were public benefactors, and the promoting of 'corners' a legitimate use of capital." The editorial referred to was in the *Standard* of October 13, 1888, first page, third column, beginning just *below* the editorials bearing George's signature, and was unsigned. As Mr. George *always* signed his editorials, and as this appeared exactly as follows—italics and all—following all the matter that bore Henry George's signature, it is plain that *he* did not write it. A careful perusal will also show that there is no foundation for Mr. Stuart's construction of it. A complete file of the *Standard* is in the Los Angeles public library, yet Mr. Stuart, having made the above charge in a meeting of the Los Angeles Single Tax Club (as well as in this MAGAZINE), and having promised to prove his charge, has not yet attempted to do so. The editorial is as follows:

"A certain Mr. Hutchinson is reported to have cleared a million dollars or more by gambling in the wheat pit of the Chicago exchange. Believing that the wheat crop was considerably smaller than most people thought it, Mr. Hutchinson contracted with various Chicago brokers to take all the wheat they could deliver him up to and including September 30 at prices ranging from 85 cents up to \$1 a bushel. The brokers, on the other hand, believing that the crop was not extraordinarily short, and that before September 30, they could buy plenty of wheat to deliver to Mr. Hutchinson at less than he was willing to promise to pay for it, accepted his offers freely. The event proved that Mr. Hutchinson was right. The wheat crop *was* short. When the brokers tried to buy wheat to deliver in fulfilment of their contracts they found they could not get it. The result was a sharp competition to get what there was, and a sudden rise in price. When the last day of delivery arrived the contracting brokers who had not succeeded in buying wheat to deliver were at Mr. Hutchinson's mercy. He could put the price of wheat, *as between him and them*, at any figure he pleased, and they must pay him the difference between that figure and the price he had agreed to pay them. He might have named \$10 a bushel had he chosen. He

was prudently merciful and named two dollars only. At that very moment, wheat to be delivered within two or three days was selling at \$1.10 a bushel.

"What Mr. Hutchinson did, in effect, was to make bets with certain other men that his estimate of the wheat crop was better than theirs. That this gambling is demoralizing, goes without saying. It is a bad thing for all concerned in it; and it is a doubly bad thing for those who, seeing it, are tempted to try if they also cannot make a living by gambling instead of honest work. It is a bad thing, in the same sense that the sale of pools at horse races is bad.

"But a great many people seem to think that Mr. Hutchinson's successful corner is going to make wheat cost the people who use it more than otherwise would have been the case. It will do nothing of the sort. The law of supply and demand is operating as freely and as surely as if Mr. Hutchinson had never been born. There is no less wheat in the country than there would have been, there has been no abnormal increase in population, there has been no diminution of wealth with which to purchase wheat. The factors that determine prices are all operating with full effect. What has happened is simply the discovery of the fact that the supply of wheat is short. The rise in price is a legitimate result of that discovery. Men will have to pay higher prices for bread this winter, not because Mr. Hutchinson won his bets, but because there is less of the material to make bread in the world than usual.

"And in so far as the Chicago corner established the fact that the wheat crop is short, it was distinctly a good thing. To establish such facts is, in the intricate scheme of our civilization, the chief function of mercantile exchanges. It is by the friction of buyers and sellers upon their floors, by the bringing of divergent opinions to the tests of actual facts, that the world's supply of food and necessities is distributed and brought to hand as it is needed. What the German socialists would accomplish by means of an army of statisticians, and with frightful risk of mistakes, our exchanges do at trifling cost and with unfailing accuracy. Men are probably sowing wheat in Australia and Chili to-day because Mr. Hutchinson's deal has warned them that the United States will furnish less than her share of wheat this year for the world's consumption. We shall have bread to eat in February without paying famine prices for it for the same reason. All the civilized world over, wherever men gather to exchange productions, the clash of buyer and seller, for present and for future use, goes on unceasingly: and whether it be tea from China, or coffee from Brazil, or wheat from Dakota's prairies that is dealt in, the result is the measuring

of supply against demand, and the checking or increasing of consumption, so that famine and surfeit may be alike avoided. It is a pity that men like Mr. Hutchinson should gamble. It is a pity that other men should bet upon the passage of rival steamers. But it is as foolish to reprehend the Chicago exchange because of Mr. Hutchinson's gambling as it would be to burn a steamship because men wagered upon her speed."

W. E. Brokaw.

#### A REVIEW OF OTHER DAYS.

Dear Mrs. Bloom, my whilom friend,  
And queen of former ravings  
When for your love I did contend.  
To soothe my bosom's cravings.  
Indeed I'm not surprised to know  
The lines I've long been reading,  
Have never been inspired by woe.  
Where you in pain sat bleeding.  
The first time that your songs of grief  
Rose tenderly above me.  
I swore I'd bring your heart relief.  
If you would deign to love me;  
I suffered, as all men must do,  
Whose hearts are strongly human.  
Who sigh and sob and live to rue  
The whims of heartless woman.  
The many, many nights I tossed  
Upon my restless pillow!  
I thought my soul and body lost!  
And soon beneath a willow  
I fancied I'd be planted deep,  
In those old days departed.  
When hourly I would moan and weep  
For you, so fickle hearted.  
I had it bad, your plaintive pen  
Was full of conjuration!  
It played old Harry with me then,  
And filled me with temptation;  
But Time, that galvanizes woe,  
Salved up my wounds long bleeding.  
And once again began to glow  
My heart with pain reeding.  
Your other readers may have thought  
Your pen was dipped in sorrow,  
Experience very dearly bought,  
Told me you'd only borrow  
The garments of a gloomy mind  
To win men's warm devotions.  
I'm one who never felt inclined  
To nurse such foolish notions.  
Your latest poem says I'm right,  
For by your own admission,  
You plainly tell you took delight  
In sending to perdition  
Myself and others whom you've won.  
Whose top knots fresh and gory.  
You dangle on your belt in fun,  
Types of the old, old story!  
You'll let me sign myself your friend?  
Or will you be my sister?  
My suffering all is at an end.  
My heart no more you'll blister;  
In friendly or fraternal ties  
Hereafter you may hold me;  
But never more mid belching sighs  
I'll let past grief unfold me.

—Shanty Maguire.

#### Clyde River Lodge, No. 46.

MR EDITOR:—I have read some fine specimens of your editorial work, and I beg leave to put myself under obligations to you by asking that you publish this review of one of the "Relics of Barbarism," situated in Essex county, in the far-famed state

of Vermont, on the G. T. Ry., which, by the way, if we commit any misdemeanor, is a very good place to get into Canada from. It is half way between Portland and Montreal, and is the terminal point for the Richmond division. The population is about two thousand. The town is about forty-five years old and has churches of all denominations and a new public school, which has lately been opened, and which is both a credit and an ornament to the town. The climate is very severe, generally averaging six months of cold weather.

On the night of October 31st, at 8:20 P. M., one of Vermont's sturdy sons arrived in town, no other than Grand Master Frank P. Sargent, who on the following evening instituted a lodge of the Brotherhood of Locomotive Firemen here with fourteen charter members. The instructions given by the Grand Master were very interesting, and he won the respect of every one present. Bro. McCarty of 301, Bro. Boxborough of 15, and Bros. Pye, Linahen and Kerr of 118, were present and all reported a good time. Now, if the ladies would organize an "auxiliary" I am sure we could find some work for them, as we are in need of an altar cover. I only make this as a suggestion, but in time of pressing need, when all the assistance is necessary, which can possibly be obtained, it is then that a lady adds a new lustre to her charms by coming forward and rendering all the assistance she can to help the boys out, it is then that she is in spirit, as well as in form, "but little lower than the angels."

Hoping some of the ladies will take this matter in hand, I remain as ever,

*The Silent Chap.*

ISLAND POND, VT., Nov. 4, 1894.

#### Benefits of the Brotherhood.

To Mr. K. G. Hoag, Master, Lodge No. 9, B. of L. F., and through his kindness, to Mr. F. P. Sargent, Grand Master, Grand Lodge B. of L. F., Greeting:

GENTLEMEN:—I have this day received from P. J. Singleton, Collector, and J. F. McNamee, Receiver of Franklin Lodge No. 9, B. of L. F., a draft for \$1,500.00, due me for total disability. And I take this means of thanking the gentlemen mentioned, together with all of my brother firemen for the generous manner in which they have aided me in this, the hour of helplessness and distress. If it were not for your kindness and brotherly help, I do not know of any way, or of any resource that I could have relied upon, and knowing that on account of my physical condition I was prevented from performing any labor whereby I might still be the support of my family. I have, at times, been very much discouraged and despondent, knowing, however, as I did,

that I was entitled to the benefits, and never giving up all hope that finally my case would be favorably passed upon. And I am very thankful, more than I am able in words to express, that I have been remembered. And my prayer is, brothers, that none of you may ever be brought to such a helpless condition as that in which I am placed, with no prospect of cure. Now, finally, allow me to exhort you all to do as you would wish to be done by, and thereby gain the approbation of your own consciences as well as the undying gratitude of those whom you assist. As long as my life is spared I will pray that nothing but the best of fortune may be yours.

I cannot close without mentioning some of the brothers who have been particularly kind to me, and in my own lodge. These are Bros. McNamee, Berlin, Singleton and Hoag, and especially all those who helped to get my ship model returned to me. I shall prize it all the more from the fact that you were so kind as to return it to me in the way you did.

Farewell, brothers, and may the good Lord bless you all.

*James Anderson.*

Hudson, Ohio, Aug. 29, 1894.

#### PERSONALS.

Bro. Arnold reports N. Y. C. lodges in excellent condition.

Bro. Milo Bowles, of 378, is doing great work for the brotherhood at Chartiers, Pa.

The Master, Secretary and all other officers of 48 are to be relied on for the future success of the new lodge up in Vermont.

On October 12th Past Grand Master Joshua A. Leach organized a lodge at New Franklin, Mo., which is known as Silver Moon, No. 164.

Brother J. J. Bellaire will please correspond with the secretary of Alpha Lodge, No. 26. Business of interest to himself. O. E. Whitcomb, Sec. No. 26.

Bros. Ricker and Sandhas of 251, and Hocking of 507, came near having an adventure in a Wilkesbarre hotel, all on account of a hole in the wall.

W. F. Hynes Lodge No. 48 will give their sixth annual ball on Thursday evening, December 20th. Great preparations are being made to make this event eclipse all previous efforts.

While looking after disability claims in Pennsylvania Grand Master Sargent paid a visit to Loyal Lodge, No. 207, at Meadville on October 18th, at which time a special meeting was held. Bro. Sargent reports great workers for the brotherhood at Meadville.

The Joint Protective Board of the Pittsburgh & Lake Erie Railway held a meeting at Pittsburgh on October 17th on which occasion Grand Master Sargent was present. The men on the P. & L. E. are earnest brotherhood men.

Your uncle, E. E. Welton, delegate at Harrisburg from Sayre, Pa., is a pretty oily article just now. He is supplying the inhabitants along the north line of Pennsylvania with the finest grades of oil. Bro. Welton is a hustler.

Grand Secretary and Treasurer Arnold made an extended trip east in the interest of the Brotherhood the latter part of October, meeting with many members while en route. He made short stops at Columbus, Buffalo, Sayre, Wilkesbarre and Easton. While on this trip he paid off the Lehigh members.

Boston Lodge, No. 57, has been undergoing the excitement incidental to preparations for a grand ball. Bro. A. W. Spur is in charge and having his reputation at stake, which reputation as a managing director is without a peer, it can readily be understood what rustling has been going on in the Hub city.

Our mutual friend, Hinsdale, of 378, has a mania for fast runs, all of which have been made on the P. & L. E. under his personal supervision. He has made assurances that shortly he will make a few special runs not down on the schedule. These will be in behalf of the MAGAZINE and promise to be record breakers.

The patriotism and rustling qualities of Bros. Pennebaker, of 289, Anderson of 222, Witty and McGriff of 160, Watt of 48, Ward and Pruyn of 99, and many of the Cleveland and Indianapolis members have been brought prominently to the front in the late contest for the headquarters of the brotherhood. They each deserved success, but that could not be.

Beginning with the next issue the brotherhood department will have something to say about members and lodges that form the acquaintance of Bros. Wilson and Maier, our new assistants to the Grand Master. It is understood, of course, that the MAGAZINE will, of necessity, depend upon grand officers in the field for information regarding members and lodges.

Again, after a short vacation, the lodges on the Missouri Pacific have called to their assistance Bro. Asa Dillon, of 31, as chairman of the Joint Protective Board. Bro. Dillon is peculiarly fitted for this position. The MAGAZINE speaks knowingly, inasmuch as away back in '88 its editor was a disciple of "The Judge" on the old Joint Board of Adjustment of the Gould Southwest system.

Golden Eagle Lodge, No. 78, at Sedalia, Mo., is busily engaged making preparations for a grand ball on the evening of December 20th. When the Missouri Pacific and "Katy" boys "combine and conspire" to have a good time all restraining injunctions, federal, state and municipal, fall flat. The ball is given to commemorate the twenty-first anniversary of the Brotherhood.

Grand Master Sargent organized Clyde River Lodge, No. 46, at Island Pond, Vt. on November 1st. This lodge starts out with 14 enthusiastic brotherhood men, most of whom are old time members of Great Eastern, No. 4. Island Pond is a division terminal between Portland, Me., and Richmond, Quebec, on the Grand Trunk Railway. Bro. Sargent was ably assisted by members of Lodges 4, 15 and 118. A banquet was tendered by the ladies which, with speaking, singing and music, made the occasion a most enjoyable affair. Success to 46.

THE JOURNAL OF THE FRANKLIN INSTITUTE. Contents for November—American Gas Company's Fuel Gas System and Apparatus, Phosphates of the World, Aerial Navigation, Engineering Practice and Education. Practical and Easy Method for Determining or Comparing the Freeboard, etc.

MINE AND THINE. BY KATHARINE PEARSON WOODS, 25 CENTS, PUBLISHED BY JOURNAL OF THE KNIGHTS OF LABOR, 814 NORTH BROAD STREET, PHILADELPHIA.

An interesting story of railway life combining romance and adventure, and written from a workingman's standpoint.

CRULL'S TIME AND SPEED CHART. BY E. S. CRULL, CHIEF TRAIN DISPATCHER, \$1.00. RAND, McNALLY & Co., 166 AND 168 ADAMS STREET, CHICAGO.

This is a valuable pocket assistant to dispatchers, engineers, conductors, etc. Tables are so arranged that with but a moment's reference all calculations of speed, distance or time are avoided. A handy companion to make close runs or build time cards.

A MANUAL OF INSTRUCTION FOR THE ECONOMIC MANAGEMENT OF LOCOMOTIVES FOR LOCOMOTIVE ENGINEERS AND FIREMEN. BY GEORGE H. BAKER, \$1.00, RAND, McNALLY & Co., 166 AND 168 ADAMS STREET, CHICAGO.

Contents—Source of Power, Combustion of Coal and Firing, Formation of Steam and Boiler Feeding, Use of Steam, Friction and Lubrication. The book is bound pocket form, flexible cover and a veritable "ignorance exterminator" and intended to cut down the fuel expense of railroads.

### The Standard Dictionary.

By actual count the STANDARD DICTIONARY contains, exclusive of the Appendix, 301,865 vocabulary words and phrases, and the Appendix of Proper Names, Foreign Phrases, etc., contains 47,468 entries, making the total vocabulary of the Dictionary 349,333—this after great care has been exercised to exclude useless words. The immense increase in the vocabulary of the English language appears from the fact that the vocabulary of Webster's International Dictionary is 125 000 and the Century Dictionary is 225,000.

It is remarkable to note the high testimonials the Standard Dictionary continues to receive from leading educational authorities in Europe and America, as Dr. John T. Duffield, of Princeton College, N. J., who writes: "It will be conspicuous among the enduring monuments of intellectual life at the close of the nineteenth century. . . For comprehensiveness of vocabulary, accuracy of definition, judicious arrangement of material, instructive illustrations, and admirable typography, it is superior to any other work of its class, and ere long will supersede them, and be recognized as the standard dictionary."

*Nature*, London, Eng., J. Norman Lockyer, the celebrated astronomer, editor, says: "It passes the wit of man to suggest anything which ought to have been done that has not been done to make the dictionary a success."

IN McCURE'S MAGAZINE for December, Miss Tarbell's second paper on Napoleon treats of Napoleon's passionate love for Josephine in the early period of their relations, and of Napoleon's swift rise to fame and supreme power through his brilliant achievements in the Italian and Egyptian campaigns. There are fourteen more portraits of Napoleon, showing him at different times in this most interesting part of his career, and six other portraits, including one of Josephine, most of these pictures being after portraits from life by the great painters of the time, including David, Gros, Appiani, Laurent and others. Professor Henry Drummond, in "Some Impressions and Facts" regarding Mr. Moody, supplies much interesting information about a man known to everybody in his public words and works, but hitherto scarcely at all known in his private life and history. Views of Mr. Moody's home and the schools founded by him in Northfield, Massachusetts, accompany the article; and in the "Human Documents" are series of portraits of Mr. Moody and his co-worker, Mr. Sankey. There is also a series of portraits of Archdeacon Farrar, who contributes a Christmas article, "The Christ Child in Art," embellished with reproductions of famous paint-

ings. Then there is an excellent Christmas story, and a story which, while not a Christmas story in point of time, is pre-eminently one in spirit and conclusion; and finally, a dramatic story of the Napoleonic era by Conan Doyle. More dramatic, though, than any story is Cleveland Moffett's history, drawn directly from the archives of the Pinkerton Detective Bureau, of "The Overthrow of the Molly Maguires" through the instrumentality of Detective James McParland, who to the risk of his life, himself became a member of the order and affected to support and aid it in its crimes. Bret Harte, in a conversation reported by H. J. W. Dam, relates his experience as a gold-digger, express messenger, school teacher, and editor in the early days in California, and tells how he came to write the stories which have given him fame. A series of portraits of Mr. Harte and other pictures accompany the article.

THE December number of the *Arena* opens the eleventh volume of this leading liberal and progressive review. It contains over 200 pages of literary matter by some of the greatest thinkers of our day, and by some of the most interesting and original of the younger American writers. It opens with an important and scholarly paper by Professor Max Muller, the famous Oxford scholar, on "The Real Significance of the World's Parliament of Religions." Count Leo Tolstoi, the great Russian novelist and social reformer, contributes a critical and appreciative paper on Guy de Maupassant and his place in literature. The Hon. George Wilson, the president of the oldest bank in Missouri, writes a paper on "The Silver question," which he calls "David A. Wells' Downfall," in answer to Mr. Wells' arguments for monometallism under the caption of "The Downfall of Certain Financial Fallacies." Rev. Minot J. Savage writes a timely paper on "The Religion of Holmes' Poems," which falls into the series on the Religion of the Poets of this last half of the century. B. O. Flower opens a series of articles which will discuss the Age of Consent laws of the various states. The *Arena* is going to try to influence legislation on this important question by creating a public sentiment in the different states which shall have the laws revised and the age raised to sixteen. There is a suggestive symposium on "The Abolition of War," which contains a valuable bibliography of the subject. Henry Lathford contributes a strikingly clever sketch of an imaginary transaction between Peter the Great and William Penn. Heinrich Hensoldt, Ph. D., who has been writing on Occultism in Thibet, and has aroused a hornet's nest of critics, writes a story, "The Fate of Major Rogers; a Buddhistic Mystery." Hamlin

Garland, the brilliant young Western novelist and poet, contributes a Christmas story called "A Woman in the Camp," which has the mastery of his earlier "Main Travelled Roads" stories. Will Allen Dromgoole, the Southern story writer, has a Christmas story of life in the Tennessee mountains called "Cinch." Walter Blackburn Harte makes cheery reading in his new department. He has a sketch called "At the Old Fogies' Club in Elysium," a dialogue between Dr. Samuel Johnson, Boswell and Oliver Goldsmith in the other world. Altogether the *Arena* presents a fine Christmas number.

#### TO REMEDY STRIKES.

The address of Charles H. Walcott before the Union League recently has brought forcibly before the attention of the public the remarkable results of the state board of arbitration and conciliation in Massachusetts.

When Sir John Gorst was present at the meeting of the Civic Federation last month he remarked that in England it was considered that the Massachusetts board was the best of its kind in the world and represented a distinct advance over anything else. Sir John Gorst is certainly an authority on this subject, because he was a member of the last royal commission on labor and made a minority report devoted especially to the subject of arbitration and conciliation. England has progressed farther than other countries in the establishment of a large number of voluntary boards of conciliation and arbitration, something like that in the bricklaying trade in Chicago, New York and Boston, but has no state or national board.

The great success of the Massachusetts board, as Mr. Walcott described it, has consisted in its commanding the confidence of the public, and its inducing both sides voluntarily to appeal to it to help settle difficulties. Out of 216 cases of labor dispute which the board has referred to in its reports from the summer of 1886 to January 1, 1894, and which apparently include nearly every important case of labor difficulty in the state, the board has settled, itself, 105, while in twenty-three other cases the parties have peaceably adjusted matters in some compromise. In only eighty-eight cases therefore, or about 40 per cent. of all, was there failure to bring about an adjustment in a peaceable way before one party or the other owned up to defeat. Of the 105 cases settled by the board fifty-five were settled by conciliation, or mediation, as it is sometimes called; that is, the board would approach both parties, sometimes at the request of one or both and sometimes without, and induce them to accept the advice of the board in the matters at stake.

In fifty cases the board was asked by both sides to arbitrate the difficulty, and, as Mr. Walcott stated, in no case has the decision of the board failed to stand.

One great secret of success of the Massachusetts board has been the high class of men selected by the governor and the permanency of their tenure, for, though they were chosen for only three years, two of the board have continued in office since its organization. These are Richard P. Barry, chosen by the governor from the ranks of organized labor, and Charles H. Walcott, an attorney, selected by the governor on the recommendation of the two other two members, as provided by law. The third member of the board has been changed twice, the third man and present incumbent, Ezra Davol, being appointed as a representative of the employing class in 1893. But these changes have been due solely to resignation for the sake of more lucrative business employment.

The care with which the board was selected at the start by Governor Robinson is seen in the special care taken by him to get a good labor representative. In view of the great extent of the shoe industry in the state, and the number of labor difficulties in it, it was thought best that the men should come from that industry and from the city of Lynn, the great center of that industry. Having decided this, Governor Robinson wrote out a series of qualifications which his appointee must have, such as integrity, good repute in his community, recognized standing in the ranks of labor, temperance, moderation of views, etc. Applying these tests to one after the other of the many who sought the office they were all rejected, and he deputed friends in whom he had great confidence to visit Lynn and look up the man, and when the choice fell upon Mr. Barry he at first declined the office, preferring his home life and assured future of a modest kind to the uncertainty and travel incident to a position on the board. This naturally confirmed Governor Robinson in his desire for the man. How few, however, of our public officials are thus carefully selected!

#### HOW MEMBERS ARE CHOSEN.

It may be well to dwell for a little upon the constitution of this famous board. The way the members are selected for three years by the governor to represent employe and employer has already been indicated. It might, however, be added that if the two representatives of labor and capital should fail to agree upon the choice of the third man, the governor would appoint on his own responsibility. It has further been remarked that this board was organized in 1886 on an act approved on the 2d of June. In January, 1894, the eighth annual report

was transmitted to the legislature by Bernard F. Supple, who has been clerk since the creation of the board. The salary of each member of the board is \$2,000 a year and necessary traveling expenses. A clerk is paid \$1,200. A stenographer is sometimes employed as well as experts, to be described later, and occasional witness fees are paid. The entire cost of the board has been during the last four years between \$8,500 and \$10,500 a year, while the earnings of the men directly involved in the controversies which the board has tried to solve have been from \$1,600,000 to \$2,400,000 a year.

Whenever any controversy or difference or not involving questions which may be the subject of a suit at law or a bill in equity, exists between an employer, whether an individual, co-partnership or corporation, and his employes, if at the time he employs not less than twenty-five persons in the same general line of business in any city or town in the state, the board must on application of either party or of the mayor and city council of the town concerned, visit the locality of the dispute. The board must then make careful inquiry into the cause of the trouble, hear all persons interested who may come before them and advise the respective parties what, if anything, ought to be done to adjust the difficulty. It is really the duty of the board to do this of its own volition whenever, in its judgment, good can be accomplished by such a policy. Sometimes an application is made, and it is evident that both parties are opposed to any conciliatory methods until they have made a trial of strength. In such cases the board is free to postpone its active efforts to bring the parties together until those efforts are likely to result in something.

The chief work of the board consists of efforts to bring the two parties together and advise them how to settle their difficulties, but a step further is taken when both parties ask in writing that the board shall arbitrate the differences. The written application must contain a concise statement of the grievances complained of, and a promise to continue in business, or at work without any lockout or strike until the decision of the board, if it shall be made within three weeks of the date of the filing of application. When an application is signed by an agent claiming to represent a majority of the employes, the board satisfies itself that such agent is duly authorized in writing to represent the employes, but the names of the employes giving this authority are kept secret by the board. The parties to the application agree also to abide by the decision of the board for six months. It is supposed that a failure to so abide by the decision might be legally punished, but only

one case of failure to obey the decision has ever occurred and that was only a partial failure. This was in North Adams in February, 1890, when the workers in certain shoe factories refused to obey the decision as they had agreed to do, but other men took their places on the conditions that the board had prescribed, and the strikers, according to the statement of the board to the writer, had some grounds for just complaint of the decision of the board, owing to some misunderstanding on the part of the latter as to the points in controversy.

If both parties to a labor dispute sign the written application just mentioned, for arbitration, a public notice is given for a time and place for a hearing, unless public notice is objected to in writing by both parties; in the latter case the board can use its discretion.

#### EXPERT ASSISTANTS ON THE BOARD.

A very important amendment to the law was passed in 1890 providing that each party to the controversy may in writing nominate and the board may appoint one person to act in the case as expert assistant to the board. The two persons so appointed must be skilled in and conversant with the business or trade concerning which the dispute has arisen. It becomes their duty, under the direction of the board, to obtain and report to the board information concerning the wages paid and the methods and grades of work prevailing in manufacturing establishments, railroads or other industries within the state, of a character similar to that in which the matters in dispute have arisen. Such expert assistants are sworn to faithfully discharge all their duties and are paid from the state treasury such sums as may be allowed by the board, usually \$7 a day, while the board is free at any time, and often makes use of this freedom, to appoint such other expert assistant or assistants as it may deem necessary.

The arbitration proceedings are at once stopped if either side fails to keep the promises to continue to work, etc., made in the written application, unless the adverse party gives a written consent.

The board has power to summon as witnesses in a case of arbitration any operative in the departments of business affected and any person who keeps the records of wages paid in those departments and to examine them under oath, and to require the production of books containing the record of wages paid.

The decision is given in writing and published at the discretion of the board in their annual report. The decision is binding for six months, unless either party gives two months' notice to the contrary. Though such notice has been given once or twice it has never been acted upon, and therefore

the decision of the board has stood for six months and in fact much longer in most cases and has been the introduction, usually, to a peaceful treatment of all controversies in the business concerned.

The law permits the creation of local boards on arbitration, but they have not been resorted to to any considerable extent.

It might be added that witnesses summoned by the state board are allowed 50 cents for each attendance and the further sum of 25 cents for each hour of attendance in excess of two hours, and 5 cents a mile for traveling expenses each way from places of employment or business.

When the board was instituted in 1886 it was found that the establishments with over twenty-hands numbered 2,007, employing 238,884 persons, or two-thirds of all engaged in manufacturing in the state. Of course the number of these large establishments with which alone the board has anything to do has grown much since then.

The first case before the board was dismissed for want of jurisdiction, and in the second case the employer refused to appear, but discharged four men and one woman of his employes who did appear. A great change has occurred since then. The shoe industry has shown the greatest readiness to utilize the board. This may be partly due to the fact that Mr. Barry, the labor representative, was himself a shoe worker. It may partly be due to the intelligence of those engaged in the industry or to other special conditions, but other industries have used the board to a large degree.

The importance of the work may appear in a single instance at Beverly. The decision of the board regarding wages in one shoe factory was followed by the adoption voluntarily of the same wages per piece in all the other factories whose pay roll amounted to over \$1,000,000 a year.

The board gives correct information to both parties to a difficulty as to wages elsewhere, and this clears up many misunderstandings. Employers generally express themselves as ready to pay as much as is paid elsewhere and when the board is able to show that higher wages are paid elsewhere the employer is under great pressure to yield. The board, however, does at times award an advance in wages or conditions over that which prevails among competitors, with the understanding that these better conditions will be temporary, pending the securing by the men of similar conditions in the rival factories; for example, the board decided in favor of the nine hour day in several places in 1892-93. Inasmuch as the rivals of the places involved followed suit in a little while, the decision of the board remained.

The writer asked a member of the board how he would answer the current objections

that arbitration meant halving the orange, e. g.; the employer might ask for a considerable reduction in wages and the board would allow, perhaps, half of it, and then the employer would make another cut and get half of that, or vice versa; the men might demand higher wages and, getting some advance, make another demand. The reply to this objection was that the board did not hesitate to decide wholly in favor of one side, especially if it had lately had a similar case before them from the same party or parties similarly situated. If they had determined upon a fair wage they would not be likely within a few months to change the wages.

When a struggle between labor and capital seems to the board inevitable as a test of strength, assometimes happens, the board lets it proceed a while, but as soon as there appears any likelihood that the two sides have measured each other's strength to their satisfaction, the board appears upon the scene, but in most cases it is not necessary to wait at all.

#### CAN MAKE AN INVESTIGATION.

The board has the power to make a public investigation and report the results of its findings to the public in case the parties refuse to adjust the differences, but the board has hardly ever done this, even when the men have asked for the aid of the board and the employers have refused. The men generally object to any investigation, though it might lead to arousing public opinion against the employer, for they have a lurking feeling that if they ever want to get back to their old places it is well not to stir up any antagonism of the employer too much. In a case of a demand for somewhat higher wages on the part of the section hands of the eastern division of the Fitchburg Railroad in February, 1893, the railroad refused to meet the men or the board, while the men were willing to do both. The board made its investigation, found that the Fitchburg Road was paying lower wages for the same work than rival roads, and was on the point of publishing its conclusions when the men came to the board and said that they had reason to believe the railroad would give them what they had asked for, and they preferred therefore that the board would withhold publication of its opinion till the annual report. Yet the board, whether the men wish it or not, can at any time make an investigation, as did Colonel Wright's commission in the recent Pullman strike, and publish its findings, and there seems to be room for considerable development in this direction in the interest of the general public, who are deeply concerned in any large strike and ought to know the exact facts with regard to it. In 1891 the board wrote:

Not infrequently it happens that someone—it may be a manufacturer, or a workman, perhaps—applies either in person or by letter for a copy of some price list recommended by the board two or three years ago, saying that a question of price has arisen in some shop or factory and on one side or the other it had been urged that a decision of the state board had in effect settled a fair rate of wages for work like that in dispute. It is obvious impossible to estimate the number of cases of this sort in which the careful, painstaking work of the board in the past has supplied a standard which, with proper adjustments to the circumstances of each case, has served to facilitate a settlement of difficulties by agreement of the parties most interested. It is certain that the work of this board is often referred to in a manner and for the purpose indicated, and this much leads us to believe that the influence of its decisions has in this way been salutary and far reaching.

This statement of the board seems altogether justified by a careful reading of their reports from the beginning and to be a very fair summary of much of their work. —Prof. Edward W. Bemis, of Chicago University in *Chicago Herald*.

#### The Brotherhood Hat.

At the recent convention a resolution was passed indorsing the "Brotherhood Hat," made at Hazleton, Pa., by Bro. F. W. Hocking, an earnest member of Lodge 507, B. of L. F. Since the adjournment of the convention Bro. Hocking has received many cash orders from all parts of the country and is greatly enlarging his plant. He runs a regular union shop, pays union wages and deserves the support of the brotherhood. It's a good thing—push it along.

#### The Switchmen's Union.

Any one desiring information regarding the organization of switchmen's unions can procure same by addressing any of the following officers:

Grand Master, D. D. Sweeney, 183 Thirteenth street, Jersey City, N. J.; Vice Grand Master, M. R. Conlin, 231 North Fourteenth street, Kansas City, Kan.; Grand Secretary and Treasurer, John Dougherty, 231 North Fourteenth street, Kansas City, Kan.; Chairman Board of Directors, F. D. Wartinbee, 522 Berlin street, LaCrosse, Wis.; H. C. Nelson, Secretary of Directors, 1317 Jefferson street, Kansas City, Mo.; M. R. Welsh, member Board of Directors, 1218 Sherman street, Omaha, Neb.

Mr. Sweeney has been employed on the Erie Railway for eighteen years, Mr. Conlin in the Kansas City yards for thirteen years and Mr. Dougherty at St. Louis for the Missouri Pacific for nine years.

### THE CHICAGO LABOR CONGRESS.

A so-called Labor Congress was held at Chicago on November 13th and 14th, under the auspices of the Civic Federation. The purport of this meeting was to hear expressions from prominent men and women upon the subject of arbitration and conciliation in disputes arising between employer and employee.

The arrangements of a programme was delegated to a sub-committee by the Civic Federation. Of this committee Judge Vincent was chairman and Miss Jane Addams secretary, and in speaking of this it would be well to call attention to their earnest and efficient work. There were present on this occasion many of the most advanced students of economic questions.

Mr. Lyman J. Gage officiated at the opening session as chairman and in his opening address, said:

This conference on arbitration and conciliation marks, we believe, a forward step in the movement of our industrial and social life. We have for many generations followed the old paths where mutual suspicions and misunderstandings growing out of apparently opposing interests have led the way to bitterness, hostility, human suffering, and social disasters. The advanced nations have found in the peaceful arena of arbitration a more satisfying method of composing international disputes than has ever been offered in the shock of battle or in the clash of contending arms. Who does not look upon the peace congress or the Geneva arbitration of 1872 as the highest expression of national wisdom and the noblest prophecy of that better day when war and its barbarisms shall cease? In the individual differences also which often arise among men as the result of opposing judgments, colored, no doubt, by self-interest, we can perceive a clearly marked tendency toward avoiding the vexatious and expensive methods of the courts by a voluntary submission of such differences to the arbitration of impartial friends. In the business world of to-day questions involving thousands, nay, millions, are thus quietly and peacefully composed. Cannot methods so benign in their character, so healthful in their influences, find a place in the industrial relationships which now so intimately enter into the warp and woof of our modern life?

It is to consider this question that the congress, or conference, has been called. Can a more worthy subject be presented for thoughtful and impartial study? The Civic Federation has no interest in it not common to all. It has no propaganda to establish. It believes, however, that the triumphs of civilization may be best achieved in the field of intelligent inquiry and temperate debate. We have therefore provided here in this city, focal as to territorial limits, focal as to influence which will shape the future, a neutral platform for various ideas and shades of opinion which may be expressed upon the important theme. The industrial committee, upon whom have rested the labor and responsibility of the programme, have put forth every effort to make it fairly and fully representative. If in any respect it lacks in these desirable features the lack must be ascribed, not to want of discernment nor absence of desire on their part, but rather to prejudices or preconceptions among those they found it impossible to successfully reach. You will, however, unite with me in congratulation at the fair promise the programme offers.

The first paper read before the congress was by Prof. E. R. L. Gould, of the Johns Hopkins University, and was a "History of Industrial Conciliation and Arbitration in Europe and Australia."

Mr. James Peabody, editor of the *Railway*

*Review*, took a strong position against anything conciliatory and preferred that laws should be enacted that would compel railway employees, like sailors, to enter into a stipulated enlistment; in fact, it was evident that as far as Mr. Peabody was concerned, he had "nothing to arbitrate." He believed that railway men pursued a dangerous occupation, but as a rule were much better paid than other laborers. Mr. Peabody said during his address:

If the essence of crime consists in injury to public welfare there would seem to be no need of enlarging upon this particular branch of the subject. Laying aside for the moment the question of asserted justification it is difficult to conceive wherein a body of men can commit a greater injury to public welfare than by just such interruptions of the movement of commerce as take place when a railroad strike is inaugurated. The stopping of a single train by a party of bandits and the robbery of the passengers or express is deemed a crime worthy of being visited with the swiftest and severest justice; but the stopping of thousands of trains and the consequent loss to the public of many times the amount that could by any possibility be realized in a train robbery, is commonly but slightly condemned, often passed by with seeming indifference and sometimes even attempted to be excused. That some additional legislation is needed to render the regulation of the general government effective and promote the welfare of the public is evident from the recent decisions in connection with railway affairs.

It may not be amiss to refer, in passing, to the confidence possessed by many in the value of a license system under governmental direction as an aid in overcoming the tendency of railway employees to strike. While without doubt the inauguration of such a system would in some degree improve the personnel of the men employed, and thus in a measure minimize the danger, it would appear to be open to two principal objections: first, that instead of being universal in its scope, embracing every employee from the highest to the lowest, it would be limited in its application; and, second, that it will fail to prevent, so far as the law can prevent, the engagement of men in a strike if they were so disposed. Such a plan is somewhat relevant to an attempt to cure a fever by the application of cooling lotions. They may be agreeable, are not without merit in the way of amelioration, but as a means of cure without value.

Society, as at present organized, is wholly dependent upon continuous operation of railways, and it not only possesses but should enforce the right of an interrupted service in these lines. Nor is society just to itself if it permits itself to be subjected to the dangers of such interruption. The possibilities of the entire stoppage of the commerce of the country because of the dissatisfaction from any cause of those employed therein is something that ought not to be entertained for a moment. In such matters of public convenience the obligations should be so binding and the penalty for violation so severe, as to preclude the careless assumption of the one or the reckless disregard of the other.

Hon. L. S. Coffin, of Ft. Dodge, Iowa, spoke in behalf of the Brotherhood of Railroad Trainmen. He spoke eloquently in describing what the railway labor organizations had done for its membership, had done for the widows and orphans that would have, in most cases, been left penniless without the aid of the brotherhood. He favored legal investigation—not arbitration—of disputes arising between employer and employee. During the course of his remarks he said:

I am not at all in sympathy with what they call

progress in giving more power to the state and national commissions. Let us have a commission of investigation, and let them focus the public opinion upon any inconsistency and wrong of the great corporations. Talk about the railroad companies saying to the public "The public be —." There is no kind of a corporation that is so sensitive to public opinion as the railroad corporation is. And you let a competent commission take down all the injustice, no matter what it is, and bring it up before the public and let the focus of the public opinion gaze upon it, and it will be a cure in ninety-nine hundredths of every trouble. That is my judgment in regard to that. And I think that is all and as far as we can go in this matter. We must remember that in this nation it is "We, the people," and you must not put your own opinion upon these railroad employees feeling that they are serfs and subjects but that they are your equal all the time and every time. Perhaps I have said all and a good deal more than I ought to say, but I hope it will be understood that all I want is some method by which these men can bring their grievances to a competent authority or arbitration or conciliation commission and have them settled instead of being left to the tender mercies of those that have the power over them, and let us act together as equal men and brother men and citizens of the grandest nation of the earth, and settle these difficulties in this beautiful way. I think, Mr. Chairman, that we have seen the last railroad strike in this nation. [Great applause.] The people are being educated rapidly, and may God grant that the end be now. [Great applause.]

Hon. Wm. M. Springer explained the intent and purposes of his bill presented to congress at its last session, and now pending, which provides for a national arbitration commission.

Judge Murray F. Tuley, who was referred to by the chairman as "the Nestor of the Chicago bar," was introduced and spoke briefly of the various plans of arbitration offered. He favored licensing railway employees as in marine service. In reference to the powers of the court he said:

The fact is, the courts have not risen. They have not progressed. They have not realized the fact that we are living in an age and under conditions very different from those from which they drew their learning and their authority. [Applause.] A decision of a hundred years ago, when a man who refused to work for the stipulated wages was branded with the letter S, and if he continued in his refusal he was transported for life, is not a decision for the present age, and especially in a country where every man is a voter. [Applause and "Amen."]

You have got to have some stringent measures, and you have got to have courts like courts of arbitration, that come directly from the workmen and from the capitalists. The capitalist has no faith in the judiciary; the workmen are fast losing their faith in the judiciary, I am sorry to say. What they want is judges emanating from themselves. The capitalist wants his, the laboring man wants his, and if you can give them their own courts you have solved the difficulty. [Great applause.]

Mrs. Charles Russell Lowell read a highly interesting paper upon the subject of "Distinction Between Arbitration and Conciliation." She explained that in conciliation the disputants alone were brought together on a harmonious basis and the results were a harmonious settlement, but failing in this arbitration was resorted to, which meant the coming in of disinterested, unprejudiced parties, who would investigate facts and then offer a solution to the perplexing problem, based upon equity and justice.

Prof. E. W. Bemis, of the University of Chicago, read an able paper on the "Ethics of Arbitration."

Miss Jane Addams, as chairman of one of the sessions, said:

In opening the second day of the conference perhaps a word of explanation would not be out of place. There was something which occurred to me several times yesterday that, perhaps, might be said with propriety. It is said that each generation has its own revolution, and that this revolution is an attempt on the part of an unrepresented portion of society to take its place in the national life; that the revolution at the end of the last century was an attempt on the part of the working people to come out into the franchise, to have the power of political action. They wished to come out into the sunshine of political equality. That the revolution at the end of this century is an attempt on the part of the working people to come out into a more equal industrial condition, to have a larger share or measure of industrial comfort. They now wish to come out into the sunshine of prosperity. That a man is successful in his generation is in proportion as he helps on this attempt of the disenfranchised to come out into their full national life.

Now, I take it, arbitration is not an attempt to cry peace. It is not an attempt in any way to retard this effort on the part of the working people, this effort on the part of the labor movement so called, to come out into a larger share and measure and a larger share of the profit. It merely wishes to substitute orderly methods for disorderly methods. It wishes to substitute the desire for justice for the emotion which now drives men forward when it is to a condition of hatred and antagonism. It wishes to substitute moral and intellectual forces for the physical forces which too often appear in a strike. It is not an attempt in any way to retard the labor movement. It is a distinct attempt to help forward in the quickest methods that labor movement toward its fulfillment. It is an attempt to bring the latter modern methods in place of the old belated methods of warfare. Arbitration wishes to accelerate that liberation. It wishes to help on the industrial revolution, but it wishes to help on by the most advanced and most peaceful methods possible.

Mr. Joseph D. Weeks, editor of the *American Manufacturer and Iron Worker*, spoke on "The Relations of Employer and Employee in Manufacturing Affairs." His address was very entertaining and made evident the fact that he had a wide and practical knowledge of the subject. Among other things, he said:

"There are three parties that unite to produce a certain thing that we call a product; and when this is produced it does not belong to any one of them, it belongs to all of them. Those three things are capital, which furnishes the money to buy the raw materials, to pay labor, to put in the machinery, to buy the land, to organize the work and go on with it. The employer may or may not be the capitalist. There is one place where we make a great mistake. We always think of the employer and the capitalist as the same. They are not the same. Theirs are distinct functions. The employer may or may not be a capitalist, and in modern industries the employer only represents the capitalist. Take these great corporations, the one who actually becomes the employer, the man in the management of the concern, is very rarely the capitalist. He may be part of the capitalist, but he is very rarely the entire capitalist. The employer stands between the capital and the laborer, who puts his handiwork, or his skill, or whatever it may be, into reproduction. Now the laborer is not the only producer. All three are producers and all three unite to produce a given product.

The wages of capital is interest, the wages of the employer is profit, and the wages of the laborer is what we term in the ordinary sense wages. Now this question, How to make this distribution properly? 1

hardly ever saw a man in my life who, when he came to divide with another man, thought the division was fair. You go to the old schools of political economy and they will say it must be settled by competition. The doctrine of *laissez faire* is the only thing that has brought it right. It is eternal law. It has existed from all eternity and it will exist through eternity; and any attempt to interfere with the doctrine of unrestricted competition, with the doctrine of *laissez faire*, is perfectly useless; you cannot do it. You cannot have anything, you cannot have any legislative enactment, you cannot have any agreement; you must simply put the laboring man into the contest with the employer, and each will inevitably seek his highest good, and you will get the thing at its best. That is the gospel of grab, and I do not believe that the gospel of grab is in accordance with our civilization.

Now, I do not believe either in strikes or lockouts. Strikes and lockouts settle nothing. I have pointed out that it is differences you wish to settle, and a strike or lockout simply decides, as a rule, which can hold out the longest. It does not settle anything. It simply puts two parties together, and the one on the one side, if he has a long purse, and the other on the other side, if he can stand starvation. It gradually comes to a point where the purse gives out or the party can starve no longer, and then the battle is at an end, not because anything has been decided, not because right has prevailed, but simply because it has come to a point where human endurance gives out—and, oh, how men will suffer, how women will suffer, how children will suffer at such hours when these strikes and these industrial contests are on hand. Men will sit, gaunt eyed and hollow visaged, by the door side, waiting for relief to come. They must believe they are right or they would never do it. [Applause.] And yet the most terrible things that ever come into human experience are strikes, and God grant the day will come soon when they will be forever ended. We want industrial peace. That is the thing we want. Nations only grow in peace. Nobody defends strikes and lockouts. There will come times when you cannot help it, but when it cannot be avoided, when the battle must be set, then I say set it, and let us have it through and be done with it.

I still have confidence in the honesty, in the integrity, in the fairness, in the justice of the American people when they can get face to face with the difficulty. [Applause.] When a man says that nobody can do it he means that there will be anarchy and socialism and communism [applause], and Chicago is not the place to preach that.

One objection to arbitration grows out of the assumption that the right to decide questions that arise between employer and employee rests with the employer alone. When the decision is given labor's only choice is to accept, or go elsewhere. An employer holding this belief naturally refuses to recognize the right of any one else to interfere on the part of any employee, or any committee, or board, or arbitrator, and treats the suggestion of an arbitration as an impertinence. I think you have all heard that, not as I put it, but practically. Stripped of its verbiage, it is an assertion that the right to dictate the terms upon which that labor should receive wages, and which are necessary to the very existence of the labor shall be performed, rests with the employer alone. It is a monstrous doctrine. [Applause.] It means slavery or starvation, and it is a theory that society for its own safety should not tolerate for a moment. Labor is not in a state of industrial subjugation, nor does it acknowledge even in theory that its wages come out of the employer's pocket. [Applause.]

Now let us have peace, let us have quiet. Let us meet face to face and settle these questions. Let us go on in this industrial peace; and then, when the hour comes that everything shall be made whole, everything shall be made right, everybody will be happy, and labor will no more stand in the midnight, with its loins girded up, waiting to be sent out into the wilderness. [Applause.]

President M. M. Garland, of the Amalgamated Association of Iron and Steel Workers, read a paper on "Sliding Scales and Kindred Methods" and closed with a

spirited address upon the labor question. Said Mr. Garland:

The main controlling spirit of wage to-day, however, is the law of supply and demand.

Part of the functions of organized labor is to arrange a specified price for labor for each position and the material or wear work, and to curtail the supply of labor all that is possible except at this specified price. The demand for labor controls the employer to a large degree in acceptance of the price specified by organized labor, but if the trade or locality be unorganized, then the natural law of supply and demand asserts full play. And the necessities of starving humanity during times of depression and a surplus of labor alone forms the basis of minimum wage.

Sliding scales, as they have been termed, are in our estimation, a step in advance of any system now in general use. The wages of the iron and steel worker have been based on and determined by this plan for twenty-eight years and, in fact, the iron and steel workers claim to be the pioneers of the sliding scale system.

Certainly, there can be no plan proposed to the average mind that bears a more equitable phase than that when the price of material or goods goes up the laborer's price should advance as well, and when the prices fall he should share in the declines. But to adopt this system, without establishing a minimum to its downward tendency, only shifts the effect described in disorganized trades and locality from advantage taken of necessity to advantage taken because of competition in trade, or, in other words, from wanton attack to competitive manipulation.

After all, it is the getting together of employer and employees with fair intention that cultivates reason on both sides. We are loath to believe the oft repeated assertion of capital and labor being at war, but the greater strangers they continue, the more they are convinced that the other is antagonistic to them. Hands cannot be clasped that are not extended. And companions are not made of people who never meet.

The workman of to-day is simply asserting his rights that possibly before he did not clearly see, but which now are plain to him. Wages based on cost of things produced, sliding scales, and kindred arrangement of wages by which the workman, for self-protection, is compelled to watch market values, have been among the mighty influences that have given us a working class who know their rights, and who at all times stand ready to defend them with reason; and failing to secure justice in this way prefer to walk from the workshop rather than to stultify themselves by acquiescence in injustice.

United States Commissioner of Labor, Carroll D. Wright, spoke on the "Distinction Between Compulsory and Voluntary Arbitration" and "Distinction Between Compulsory Arbitration and Public Investigation of Labor Disputes." The speaker said:

The labor question reduced to concrete form means simply the struggle for a higher standard of living. There may be various ramifications to the question, there may be various complications in it, but the labor question broadly stated means just that—a struggle for a higher standard of living. In this struggle there are strikes, lockouts, labor wars, ambitions that are never fulfilled, the envy and jealousies of labor leaders, a little of politics, a great deal of nonsense, a great deal of aggression, but underneath it all there still remains that underlying struggle for a higher standard of living. The other matters must all be left out of the account; the vagaries of crank, the arbitrary and dogmatic rule on one side or the other, must all be eliminated in the discussion of the labor question from whatever point of view you take it. A strike in itself is simply a protest against any attempt to change conditions adversely, or to prevent the success of this struggle to which I refer. A strike, therefore, must be considered as one of the essential elements of that particular conflict which we are discussing in this conference.

You know that all conflict, all war, all controversy, leads ultimately to good. You know that civilization has never taken a step in advance without conflicts and as the old Athenian philosopher remarked: "War is the father of all things," and so it is when we consider it philosophically: so it is when we look to the underlying principles of progress. All war means the suppression of some form of evil, although there may be great evil in the form of suppression, but out of it all some good is accomplished, some people are brought up in the vale of civilization, and the great step of progress is secured. There are so many instances quartered all along through history which prove this statement that I need not refer to them even, they come to your minds; they come to every man's mind, and however much we may condemn war, however much we may condemn conflict of any kind, because individuals may go down in the conflict, because somebody's principles may be destroyed; because somebody's philosophy may be overturned; we cannot help recognizing that it is only through this conflict that good ever comes in this world.

The distinction between compulsory and voluntary arbitration is the distinction between a continued fight and continued conflict and the supremacy of reason. Voluntary arbitration is a tribunal to which men resort whenever they wish to settle matters outside of courts and beyond their own wisdom. They may be wise enough of themselves to settle the question; but there are elements in an industrial controversy which appeal too strongly to personal interests to allow the parties themselves to look upon the question submitted broadly and in a philosophical sense.

Compulsory arbitration would mean the force of government in settling these questions, and it may be that it will be considered right and just and fair that the people should step in and control the difficulty in their own interest, and when that time comes to modify compulsory arbitration, it should be the rule everywhere in industrial matters; then I predict, ladies and gentlemen, that the man or the corporation who so conducts, or rather who so misconducts, his affairs as to permit a strike to exist, will receive the same disgrace at the hands of public opinion that the fraudulent bankrupt does to-day. [Applause.]

What I have just said relative to compulsory arbitration and the power of the tribunal to summons witnesses and to determine all the facts relating to the question would result in the publication of all the facts relating to the controversy. This would get rid of the sheriff. It would get rid of the military arm of the government in the prosecution of this work, and would result in the establishment of peace and the preservation of harmony in the main, and the peace of the community. Publicity of accounts of railroads and other great corporations would result in great good. Every statistician knows that whenever he attempts to make an investigation his first antagonism lies in the suspicion of the producer or the employer or the employee that personal affairs somehow are going to be brought into public notice, forgetting always that the individual is of no particular account in public investigations, but that the facts are of great account.

All the parties concerned should be notified that the tribunal proposes, upon a certain day—and the earlier the day the better—to be at a given place, there to look into the cause of the trouble, to adjust the difficulties by conciliation, if possible, and in the event of failure to fix the responsibility for the same. Proceeding in this way the report of such a commission would cause public opinion promptly to settle the question, or at least to fix the responsibility where it belonged, and to render successful opposition to the conclusions reached an improbability. [Applause.]

I believe in that lies the keynote of this whole business. If this recommendation can be carried out and the question set before the public, public opinion will take care of the rest without the intervention of the sheriff. There is not a manufacturer in the United States, there is not a labor organization in the United States that could stand up against the verdict of the people should they say that the responsibility of a great strike had been fixed upon it.

"The Economics of Arbitration" was presented in a masterly address by Prof. Henry C. Adams, ex-secretary of the interstate commerce commission. During the course of his remarks he said:

Industrial arbitration brings into controversy a question of personal liberty and fits logically into the history of the English-speaking people. It, and all that it implies, may be regarded as the English solution, as socialism is the German solution, of the labor problem. The reorganization of industry adapted to arbitration, together with the development of personal and corporate duties and rights incident thereto, will be recognized, should it ever be accomplished, as the fourth step toward the attainment of a society composed of freedmen. The first step consisted in the disintegration of feudalism and the consequent enfranchisement of labor. The second step was taken when freedom of conscience became the prized possession of the English people; while the third is found in the realization of political liberty as expressed in constitutional government. Specialists upon the labor problem, whether believers in coöperation, in profit-sharing, in the efficiency of trades unions, or in socialism, all agree that it is impossible for men to become masters of the conditions under which they live and work without acquiring control over the opportunities of labor, which is the essential fact incident to the possession of capital. Profit-sharing is the logical child of coöperation and was conceived by benevolent minds because of the failure of coöperation in practice. Both recognize the necessity of a property which shall be a universal possession in order that the character of the worker, as well as the technique of production, may be raised to the grade of ownership. In no other way can the sense of independence and responsibility be made universal. The same thought also lies at the basis of socialism, which seeks to guarantee men their industrial liberty by converting the political organization into an industrial corporation in which all men shall be shareholders by virtue of being citizens.

It would seem, then, that the only question in controversy pertains to the most appropriate method of rendering property a universal possession. For myself I am willing to concede the socialistic claim that the programmes of savings banks, coöperation and profit-sharing (so long at least as the receipt of profit is a gratuity of the employer and not a right of the worker), are utterly futile, and that their advocacy turns attention from the proper issue. Saving by the individual worker of such a sort and to such a degree that he may come into possession of industrial property, and by virtue of such possession exercise any control over the conditions of this life in a society which tends strongly toward great industries and which recognizes competition as the sovereign regulator, is impossible.

Government, while the sphere of its influence may be widened, need enter upon no new and untried lines of activity to insure the solution of the labor problem. The line of development is clear-cut and simple for him who perceives the possibilities which lie in a bold and judicious use of voluntary association and intercorporate contracts.

The peculiar form which arbitration will assume, should it be established, cannot, of course, be definitely stated, but a few suggestions may perhaps be safely ventured. It would seem essential in the first place that laborers availing themselves of their right of voluntary association should make use of their unions as an agency of contract. According to the ideal of arbitration there is no common labor interest which can serve as the basis of a permanent union embracing all workers or furnish a platform for political agitation by the labor party. The interests which laborers have in common pertain to them as members of a society of freemen and not as laborers.

There exists no interest common to all laborers, but an interest common to workers in a given trade or to the employees of a given corporation is a very palpable and real thing; and if arbitration is ever realized it must be through the agency of trades unions which recognize this fact.

If the first step towards the realization of arbitration be the proper organization of labor, the second

consists in the development of the labor contract. Before a labor contract between incorporated labor and incorporated capital can be effected there must be a general consensus of opinion respecting some of the fundamental rights of the contracting parties and crystallized into a common law of industry through cumulative precedents.

If it is clearly conceived that ability to control the conditions of one's life or to have a voice in their control, is an essential condition of personal liberty, and that the irresponsible exercise of any power whatever, whether political or industrial, is the chief obstacle to the possession of that liberty, there opens up the possibility not only of an adjustment of the labor difficulties, but of a period of progress in all social and industrial affairs.

The development of the labor contract, therefore, as appropriate to the programme of arbitration in industries, assumes the development of a public sentiment respecting the dangers incident to the irresponsible control of industries. The two great industrial problems of the day are the labor problem and the monopoly problem, and both may be solved by applying to them the theory of responsible administration of industrial power. The responsibility of a de facto proprietor must in the case of the labor problem be to the men employed in the industry in question. The responsibility suggested by the evils arising from monopoly must be to the public at large.

The economic doctrine of capital must be abandoned and an entirely new conception find place among economic doctrines. Capital is not, at least this is what the theory of arbitration implies, a material thing that can be created by saving or dissipated by spending. It is energy. It is force.

The third step in the economy of arbitration consists in the adjustment of government to the requirements of the new industrial order and, in theory at least, the task which this imposes upon government is not severe. The government must accept as new care the duty of keeping open the doors of opportunity; that is to say, it must be the supreme arbitrator as to the tendencies which give the decision of the special board of arbitration.

If substantial advantages accrue to the laborer through the establishment of boards of arbitration so that membership in an organization is a thing of real value, the difficulty suggested will very largely settle itself. It will also be necessary, in order to realize an ideal of industrial society organized upon the theory of copartnership between employers and employees, for government to take a very decided stand respecting the matter of an open and untrammelled market. Nothing in the nature of a monopoly can be allowed, even though the laborer participate in the accruing benefits. Above the interest of the capitalist and of the laborer stands the interest of society, which has a greater care than any individual in maintaining the conditions of individual liberty.

The question of arbitration is at bottom a question of personal liberty, and implies the creation of new and unusual rights, which when realized by that great class who are now the possessors of no property shall come to be for them a veritable property.

**Judge John Gibbons spoke on "Private Rights," saying in part:**

I assert it to be the universal law of civil society, whether made so by municipal enactment or not, that every hour of a man's existence belongs to the society of which he is a part, and that it is an infringement upon the metaphysical rights which enter into common life to idle or dream away his time. In the great plan of creation it never was designed to have drones or defectives in the family of man. Among these inalienable rights is the right of purchase, of sale and contract, the right to pursue any lawful business or vocation in any manner not inconsistent with the rights of others, the right to work for whoever may offer employment at any price agreed upon. Rights are not and cannot be limited to those known as individual possessions which are secured to the individual by common right, natural justice, and constitutional protection. Natural or absolute rights obtain only in a state of nature; hence we can find no recognition in social economy, save as modified by and subordinate to the relative rights of others and the natural rights of all. The right of

property embraces not only the exclusive privilege to use and enjoy the thing owned but all the exclusive power to sell, transfer, and dispose of the same upon such terms, at such times, and to such persons as may be agreeable to the owner, provided that in so doing he violates none of the laws or customs established by the society of which he is a member and to which he is indebted for the protection, preservation, and enjoyment of that which is his. Nor does the right of property end here.

So long as society exists for the protection, preservation, and perpetuation of personal liberties, of personal securities, and of the inviolability of private property, a man not only ought to be protected in his right to things tangible and possessory, but should also be protected in his just expectations as to things intangible, such as the fruits of his labor which become valuable rights of property.

We are now confronted with a great national emergency, engendering grave necessity for public action. During last summer, in this great city, markets of trade and commerce were converted into military camps. No man felt secure in his liberty, property or possessions. The supply of food and fuel necessary for the wants and comforts of two millions of people were threatened. In that dread hour, for the first time in the nation's history, the executive of the United States, pleading justification on the score of public necessity, ignored every conventional constitutional requirement, and dispatched the army and navy of the United States to perform the duties of the municipal police. Even those who deny the rights endeavor to justify this assumption of power upon the ground of "public necessity"; upon the claim that the government is a contrivance of human wisdom to provide for human wants and to protect in individual rights.

Whether the power of remedying existing abuses arising from the present inability of the law to adjust the differences between capital and labor, which gives rise to strikes and lockouts, is now vested in the legislative department of the government under the constitution or is still retained by the people matters not. That the power exists and ought to be exercised I do not hesitate to declare. If the constitution is not broad enough it must be expanded.

**"The Relation Between Employer and Employee in Building Trades"** was the subject of an address by Mr. Wm. H. Sayward, secretary of the National Association of Builders, and Mr. T. J. McGuire, secretary of the United Brotherhood of Carpenters and Joiners. This was something like a debate, yet both agreed that their respective organizations would be able to fight it out without interference from outside parties.

Mr. Sayward, the first speaker, said during an address of one hour and thirty minutes:

After arbitration has been exercised, even with as perfectly satisfactory results as possible, that particular case only has been settled—no more. No means have been adopted to prevent a recurrence of the disease. Can such a method be the best which is only brought into service when the body has become the victim of disorder, and then, if its application is fortunate enough to produce an apparent cessation of the malady, leaves the subject unprotected against renewed infection. Our contention is that it is poor policy to allow things to reach such a pass as this.

The method should be a mutual agreement made before sale or purchase by the buyer and seller, covering the amount and quality of goods, when, where and how delivered; the price and other matters incident thereto; the agencies by and through which the agreement is effected; the organization representing respectively the buyer and seller, specifically stated and precisely as it is in operation under the recommendations of the National Association of Builders.

In places where our plans have been put into operation, and this has varied in time of operation from

three to six years, there has not been a single stoppage of work; the hours of labor, wages and all incidental matters have been arranged at the annual meetings of the joint committee, which are held at a time of year which gives everyone opportunity to adjust himself in estimating for new work. We believe the plan is capable of universal adoption, and that when adopted it will bring that peace, harmony and safety which we all profess to desire.

**Mr. McGuire only spoke for about twenty-five minutes, during which time he said:**

I do not want the state to help us. If we can't help ourselves we have no right to expect to be helped. We have the right of organization. The employers have the same right. We must have regard for each other's rights. In the primitive times of society the employer had a sort of paternal interest in the workingman. We don't want that now. Workingmen rarely want to strike. The question of a strike is deliberated upon for days and days, and often is declared only because employers have no conscience of right and think that all they must do is to grind the workingman. When there has been a flood time of trade and employers have made money, it has taken them often several years before the golden rule has entered their heads.

**Mr. Samuel Gompers, president of the American Federation of Labor, was the last speaker of the congress. He was dubious as to the advisability of any step toward a plan of arbitration by law. During his remarks he stated that:**

Arbitration was practiced between the workmen of England and their employers quite a long time, but their experience demonstrated that arbitration, so far as they were concerned, was considerably one-sided. It is more than twenty years since the workmen of Great Britain repudiated arbitration as inimical to their interests.

The question of labor will remain unsettled until justice has been done the worker. Not that kind of justice when a man wearing the ermine of the supreme court of the United States will put his signature to a paper prepared by corporation attorneys and then declare that he has just now issued a document that is practically a Gatling gun on paper; not that kind of justice, when a general of our army, supposed to defend our interests, declares that by force of arms, if necessary, he will break a strike.

Why do employers usually prefer dealing with their own employees? Simply because they know that as a rule the employees of the particular firm will not as persistently represent their interests as would a chosen representative who can lose nothing by an attempted blacklisting on the part of the employer. I deny the right of my opponent to choose my counsel. The walking delegate, abused as he is, the labor agitator, cursed as he is—they are the counsel of the working people. [Applause.] This congress is of great importance. It speaks well. It means hope for the future, when you and I, men and women, who represent opposite views, can come here and talk this matter over freely, openly and yet not lose any respect that we may have had for each other, but, on the contrary, make friends and friendships lasting. I can only express the hope of success in our movement, in the line of right, in the line of justice, for the men and women who labor.

**The following resolution was passed at a meeting of the speakers at the close of the last session of the congress:**

Having been requested by the sub-committee of the Civic Federation of Chicago, having in charge the conference of arbitration and conciliation, to offer suggestions as to the trend and value of the congress as to what might best perpetuate its influence, the parties who have been asked to present papers at the conference do suggest and recommend to the said sub-committee to report back to the Civic Federation that a large national commission be established, through the Civic Federation of Chicago, for the purpose of procuring the wider application of the principles discussed at this congress.

## GRAND LODGE.

### Assessment Notice for December.

OFFICE OF THE GRAND LODGE, B. OF L. F. J.  
TERRE HAUTE, IND., December, 1st, 1894.

ASSESSMENT No. 50, \$2.00.

To the Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the order, viz:

CLAIM No. 1404. Charles M. Laughlin, of Smoky City Lodge, No. 219, was declared totally disabled by Consumption, September 24, 1894.

CLAIM No. 1405. Edward Custard, of Spanish Peaks Lodge, No. 328, died of Spinal Meningitis, June 23, 1894.

CLAIM No. 1406. H. A. Farrington, of Gold Range Lodge, No. 341, was declared totally disabled by injury to Spinal Cord, July 16, 1894.

CLAIM No. 1407. James Rowe, of St. Clair Lodge, No. 116, was declared totally disabled by Consumption, September 3, 1894.

CLAIM No. 1408. Joseph A. Rice, of Fort Pickering Lodge, No. 206, died from an Abscess, September 4, 1894.

CLAIM No. 1409. James Reddy, of Arbitration Lodge, No. 320, died of Pulmonary Consumption, September 12, 1894.

CLAIM No. 1410. John A. Kafer, of D. J. Chase Lodge, No. 259, was killed in a Railway Accident, September 17, 1894.

CLAIM No. 1411. Thomas J. Macon, of Friendly Hand Lodge, No. 201, died of Jaundice, September 21, 1894.

CLAIM No. 1412. Wm. C. McNamara, of Triumphant Lodge, No. 47, died of Consumption, September 24, 1894.

CLAIM No. 1413. James Raub, of Lehigh Lodge, No. 251, was declared totally disabled by loss of Leg, September 27, 1894.

CLAIM No. 1414. C. E. Jeffries, of Orphans' Hope Lodge, No. 466, died of Typhoid Fever, September 28, 1894.

CLAIM No. 1415. J. H. Jennings, of Rickard Lodge, No. 229, was declared totally disabled by loss of Leg, September 29, 1894.

CLAIM No. 1416. Peter Ferrell, of Pride of the West Lodge, No. 6, died of Consumption, September 29, 1894.

CLAIM No. 1417. Wm. J. Flynn, of Ft. Ridgley Lodge, No. 63, died of Bright's Disease, October 1, 1894.

CLAIM No. 1418. Henry J. Bailey, of Adamant Lodge, No. 411, died of Catarrhal Consumption, October 1, 1894.

CLAIM No. 1419. Thomas H. Warren, of Cherish Lodge, No. 440, was killed in a Railway Accident, October 4, 1894.

CLAIM No. 1420. Marshall S. Lower, of Success Lodge, No. 33, was killed in a Railway Accident, October 8, 1894.

CLAIM No. 1421. John Haley, of Central Park Lodge, No. 237, was killed by Jumping from Engine, October 8, 1894.

CLAIM No. 1422. Bernard S. Riney, of Pride Lodge, No. 502, died from Paralysis, October 14, 1894.

CLAIM No. 1423. E. H. Stone, of Loyal Lodge, No. 207, was declared totally disabled by disease of Lungs, October 18, 1894.

CLAIM No. 1424. John Cronin, of Loyal Lodge, No. 207, was declared totally disabled by Bright's Disease, October 18, 1894.

CLAIM No. 1425. Wm. F. Hosey, of Lackawanna Lodge, No. 283, was killed by Railway Accident, October 31, 1894.

An assessment of TWO DOLLARS (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls of membership NOVEMBER 30th, 1894, (also for all members having taken a withdrawal (limited or final) after NOVEMBER 1st and for all members who died or were totally disabled since that date), said remittance to reach the Grand Lodge not later than DECEMBER 20th, 1894, as provided in Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all the benefits of the order, as per Section 52 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

F. W. ARNOLD, G. S. and T.

#### Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,  
TERRE HAUTE, IND., November 1, 1894.

#### To Subordinate Lodges:

The following is a statement of the Beneficiary Fund for the month of October, 1894:

A NEW BOOK BY THE AUTHOR OF HAND BOOK OF CALCULATIONS FOR ENGINEERS.

## Hawkins' Aids to ENGINEERS' EXAMINATIONS---Questions and Answers.

This is a summary of the principles and practice of steam engineering, prepared for applicants of all grades, with several hundred sample questions and answers likely to be asked by the examining engineer. The work contains extracts of the laws and requirements of the United States pertaining to engineer's licenses; also city and boiler inspection companies' rules. The work is bound (being designed for constant and ready reference) in substantial red leather with titles and edges in gold. Between 200 and 300 pages, printed on heavy fine surface paper. Size 5 in. x 7½ in. Price, delivered free of post, \$2.00.

### CONTENTS.

INTRODUCTION; CLASSIFICATION OF KNOWLEDGE; QUESTIONS AND ANSWERS RELATING TO HEAT AND WORK; THE STEAM BOILER; MATERIALS FOR BOILERS; EXPANSION AND CONTRACTION OF STEAM BOILERS, DITTO INCrustATION AND SCALE; QUESTIONS AND ANSWERS RELATING TO FIRING, COMBUSTION, CONSTRUCTION AND STRENGTH OF THE STEAM BOILER. QUESTIONS AND ANSWERS RELATING TO THE PHYSICAL PROPERTIES OF STEAM, THE STEAM ENGINE, ENGINE AND BOILER FIXTURES. SAFETY VALVES WITH COPIOUS RULES AND EXAMPLES, SATURATED STEAM WITH TABLES; QUESTIONS AND ANSWERS RELATING TO PUMPS, THE INJECTOR, THE INDICATOR, GRAVITY. QUESTIONS AND ANSWERS RELATING TO BOILER BRACES, TO ICE MAKING, REFRIGERATION, ELECTRICITY, WITH FOOT NOTES AND PLAIN EXPLANATIONS ADDED ON ALL THE ABOVE SUBJECTS. HOW TO SET THE VALVES OF A CORLISS ENGINE, THE SLIDE VALVE, THE VALVES OF A DUPLEX PUMP. A PRELIMINARY EXAMINATION, CONDUCTED BY ONE'S SELF. INDEX.

# Three Big Watch Bargains

## A GRAND HOLIDAY OFFER!

First Bargain:—

**ONLY \$7.43.**

(Ladies' or Gents' Size.)

**SPECIAL OFFER.**

We have a

### BEAUTIFUL CALENDAR WATCH.

which not only tells the time like ordinary first-class watches, but ALSO TELLS the DAY OF THE WEEK, THE DATE OF THE MONTH, THE MONTH AND CHANGES OF THE MOON, as you see by the accompanying correct likeness of the watch, which shows the exact size. This watch is an exquisite gem, with fancy porcelain dial, to which no description can do justice. You must see it to judge fairly. It is an elegant and reliable timepiece in every way (a jeweled stem-winder), and is furnished by a Nassau-street firm, whose factory is in Switzerland. Each watch is guaranteed by them. The watch will not only be invaluable to you, but it will make an

### ELEGANT CHRISTMAS GIFT.

We offer it for sale at the remarkably low price of \$7.43. You need send no money in advance unless you prefer. The watch will be sent U. S. D. by express. You can examine it, and, if satisfactory, pay the \$7.43 to the Express Co. If you do result in advance you save express charges, as we send by registered mail, prepaid, when remittance accompanies order. The regular price is \$12.00. Cheaper watches than this are offered of course, but this is the **ONLY CALENDAR WATCH**. It will not only be found in every way a reliable timepiece for daily use, but in appearance it commends itself to the most refined and genteel taste, and it would be regarded anywhere as a costly ornament.

Second Bargain:—

IN ADDITION to this elegant Calendar Watch,

we have a very fine and handsome **LADIES' CHATELAIN WATCH**, in **SOLID SILVER CASE** (beautifully ornamented) stem-winder, guaranteed a correct timekeeper, and a desirable watch in every respect, which we will send to any address, by registered mail, prepaid, on receipt of \$3.60. This is an unusual chance to get a genuine solid silver ladies' watch. **WE WANT AWAY MONEY** on the cheap watches that are offered so widely at what seems a cheaper price, but which are not worth having at any price?

Third Bargain:—

If you want a good watch (which is not a Calendar Watch) for yourself or your boy, we can send you an excellent timekeeper (stem-winder), warranted to be far above anything else of the kind in the market, for \$3.45, sent by registered mail, prepaid. This is no cheap nickel watch. It is

### A Beautiful Watch in Appearance, Having a Fashionable

ebonized steel case, elegant and genteel, and you will wonder how we can afford to sell it for less than double the money. Every one of our watches is guaranteed in every respect. If you want both the Calendar Watch and the Ladies' Solid Silver Chateau Watch, we will send you the two together, U. S. D., for \$10.55, or we will send them, transportation prepaid, on receipt of this price. If you do not want the Ladies' Chateau Watch, but want the Calendar Watch and the Ebonized Steel Case Watch, we will send those two together, U. S. D., for \$10.40, or we will send them, transportation prepaid, on receipt of price. If you want all three (and you can certainly put them to good use at this season of gifts) we will send all three together, U. S. D., for \$13.50, or we will send them, transportation prepaid, on receipt of price. Never in the history of the jewelry trade has so much good value been offered for so little money.

Remember every watch we sell is guaranteed; we sell you our goods at a low price to secure your future orders; and we will stand by every representation we make, and warrant that we will succeed in giving the most complete satisfaction possible.

This lot of Watches has been secured by us for disposal through our other dealings with the firm that manufactures them, and this sale is an extraordinary one. Do not fail to order at once. State whether ladies' or gents' size is desired. Address

**WATCH DEPARTMENT, Homes and Hearths Co., New York.**

# STEAM ENGINEERING

# FREE TO SUFFERERS.

Why waste time, money and health with "doctors," wonderful "cure-alls," specifics, etc., when **when I will send FREE** the prescription of a new and positive remedy for a **prompt lasting cure**. Lack of strength, vigor and manhood quickly restored in young or old man. I send this **prescription FREE of charge**, and there is no humbug or advertising catch about it. Any good druggist or physician can put it up for you, as every thing is plain and simple. I can not afford to advertise and give away this splendid remedy unless you do me the favor of buying a small quantity from me direct or advise your friends to do so. But you may do as you please about this. You will never regret having written me, as this remedy cured me after everything else had failed. And letters sent in plain sealed envelope. Enclose stamp if convenient. Address **E. H. HUNGERFORD, Box A 314, Albion, Mich.**

**COOK REMEDY CO.**

**Blood Poison!** Primary, Secondary or Tertiary permanently cured in 15 to 35 days. We eliminate all poison from the system, so that there can never be a return of the disease in any form. Parties can be treated at home as well as here (for the same price and under the same guarantee,) but with those who prefer to come here, we will contrive to cure them or refund all money and pay entire expense of coming, railroad fare and hotel bills.

**Our Magic Remedy** **Eight Years in Use and Never Failed** to cure the most obstinate cases. We challenge the world for a case we can not cure. Since the history of medicine a true specific for **BLOOD POISON** has been sought for but never found until our Magic Cyphilitic was discovered. We solicit the most obstinate cases and challenge the world for a case we cannot cure. This disease has a way of baffling the skill of most eminent physicians.

**\$500,000 CAPITAL** behind our unconditional guarantee. **Absolute proofs** sent sealed on application. Address, **COOK REMEDY CO., Room 307 Masonic Temple, Chicago, Ill.**

**COOK REMEDY CO.**

**BLOOD POISON**

## How's This.

We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO., Props., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligation made by their firm. West & Truax, Wholesale Druggists, Toledo, Ohio. Wadding, Kinnan & Marvin, Wholesale Druggists, Toledo, Ohio.

Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Price, 75c per bottle. Sold by all Druggists. Testimonials free.

**WANTED.** Agents to sell our choice Nursery Stock. Apply at once and secure territory. Big money made. Outfit free. Now is the time. Address with reference, F. N. MAY COMPANY, Rochester, N. Y.

**\$12 to \$35 Per Week**

Can be made working for us. Parties preferred who can give their whole time to the business. Spare hours, though may be profitably employed. This announcement is of special interest to stirring men who wish to rise in the world. Good openings for town and city work as well as country districts.

**R. F. JOHNSON & CO., No. 3 So. 11th St., Richmond, Va.**

## OF INTEREST TO R. R. MEN AND THEIR FAMILIES.

U. S. CENSUS, 1880, REPORTS

**35,000 DEATHS FROM CANCER**

### The IOLA SANITARIUM

is an institution thoroughly equipped for the treatment of Cancer, Tumors and all malignant growth without the use of the knife, and effects a permanent cure where the circumstances are at all favorable for treatment. References on application.

Address DR. GEO. DALE, Iola, Wisconsin.

## ARE YOU DEAF?

Don't you want to hear?

The AURAPHONE will help you if you do. It is a new scientific invention which will restore the hearing of any one not born deaf. When in the ear it is invisible, and does not cause the slightest discomfort. It is to the ear what the glasses are to the eye—an ear spectacle. Enclose stamp for particulars.

THE AURAPHONE CO., 607 Masonic Temple, Chicago.

The Largest Manufacturer of Artificial Legs in the World. And also the Largest manufacturer of Artificial Arms in the World without any exceptions.

## Marks' Patent Artificial Limbs,

WITH RUBBER HANDS AND FEET, are natural in action, noiseless in motion, durable in construction, and the most comfortable to wear.

To A. A. MARKS:

DEAR SIR:—I was a professional tight rope walker and aeronaut before I lost my leg, and I do not allow the loss of a leg to compel me to seek another occupation. With your patent artificial leg I can walk a tight rope nearly as well as I ever could. I feel safe and sure on my rubber foot, no matter where I place it. I consider your invention of the rubber foot the most valuable and important to persons who have lost their natural limbs.

Respectfully yours,  
PROF. F. E. JACOBY,  
Waterbury, Conn.

Over 15,000 in use, scattered in all parts of the world. Eminent surgeons and competent judges commend the Rubber Foot and Hand for their many advantages.

**RECEIVED 24 AWARDS, INCLUDING HIGHEST AWARD AT THE WORLD'S COLUMBIAN EXPOSITION.**

Endorsed and purchased by the U. S. Government and many foreign governments.

A treatise containing 430 pages, with 300 illustrations sent free, also a formula for taking measurements, by which limbs can be made and sent to all parts of the world with fit guaranteed.

Address,

**A. A. MARKS,**

701 Broadway, New York City.

Established 41 years.

NOTE.—The above cut was made from a photograph of Prof. Jacoby while performing on a tight rope. He is balancing entirely on his artificial leg, his natural foot is off the rope and is in the act of passing forward to take the next step.

**STIFFNESS, SWELLINGS, BACKACHE, NEURALGIA,**  
**SCIATICA AND RHEUMATISM.**

**"PULL YOUR LEG"**

Is less to fear with Railroad men than to Lose Your Leg. In the latter case you surely want to replace it with a **Patent Adjustable Slip Socket**. *Warranted not to chafe the stump.* Received the Gold Medal and the Diploma at the World's Fair. Also Gold Medal, Bronze Medal and Diploma at the California Mid-Winter International Exposition.

**LARGEST FIRM IN THE UNITED STATES.**

The Inner Socket, seen outside the limb in cut, is made over a plaster cast of the stump, giving an exact fit, being held permanently upon the stump by elastic fastened to lacer above, and in act of walking moves up and down in the Outer Socket, bringing all the friction between the two sockets, instead of between the stump and the socket as in the case of all wooden socket limbs. With our **SLIP SOCKET** the most tender, sensitive stump can be fitted and limb worn with perfect ease and comfort. Endorsed and purchased by the United States Government. Send for our new catalogue with illustrations.

**THE WINKLEY ARTIFICIAL LIMB CO.,****323 Nicollet Ave. MINNEAPOLIS, MINN.**

1 Broadway, New York. 308 Walnut St., Philadelphia  
 70 Kilby St., Boston. 36 Main St., Norfolk, Va.  
 1 Fenchurch Ave., London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the out-puts have increased over 1,200 per cent. beyond all precedent, amounting during 1892 to 3,000,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

### WHAT THEY SAY ABOUT OUR

ELDON, Ia., Dec. 18, 1893.

DEAR SIR:—Please send me one of your seats for locomotive use. I find that they are the best seat for engine use that I have seen yet. I want it 24 inches long and 20 inches wide. Weight, 170 pounds. Send it C. O. D.

Yours respectfully,  
(Signed) W. T. Brown,  
Engineer C. R. I. & P. R. R.

We refer by permission to the following users: D. J. Crowley, Engineer S. F. & W. Ry., 16 Jones st., Savannah, Ga.; Jno. Horton, Engineer Grand Junction, Colo.; Wm. Malloch, Engineer G. T. Ry., Belleville, Ont.

## ALL STEEL CAB SEAT.

**ROUGH RIDING MADE EASY.** Just put this seat in the box and lay your cushion on it. Made only of finest tempered steel spiral springs, heavy band steel bottom frame, and tempered woven wire fabric. Any size or shape desired. Usual size, 18x24. Price for seat not over 24 inches long, \$2.00. Terms, C. O. D. or cash with order. Please give your weight.

MANUFACTURED ONLY BY

**HAGGARD & MARCUSSEN,**

409 and 411 S. Canal St.,

CHICAGO, ILL.

—CHAS. MILLER, President—

## Galena Oil Works, Limited.

FRANKLIN, PA.

### SAFETY, SPEED, ECONOMY

Are the results of the use of Galena Oils. Scientific and practical tests of the past twenty years have demonstrated the fact that Galena Oils are superior to any other oils in the market.

Galena Oils in winter stand a cold test of from ten to fifteen degrees below zero, and will not freeze in the coldest weather.

The superiority of Galena Oil is demonstrated by their exclusive use upon a large majority of the railways of this country. They are in use upon three continuous lines of railways from Boston and New York to the Pacific coast and on one to the City of Mexico, thus demonstrating their adaptability to all climates and all temperatures.

We also supply our patrons with Sibley's Perfection Valve Oil, which is in exclusive use upon a large majority of the leading railroads of the country.

When addressing our advertisers mention this Magazine.

**NOTE**—There are many injectors which will work well when the conditions are favorable. This injector is designed to work well under all conditions and is, therefore the most reliable.

**IT WILL RE-START ITSELF.**

**IT WILL ADJUST ITSELF.**

**IT WILL LIFT HOT OR COLD WATER.**

Its range of capacity is over 60 per cent. and it can be regulated, therefore, to work continuously for light or heavy trains. It is operated by a simple lever motion which readily starts and stops its action.

# ON GENUINE DIAMONDS

WE CAN SAVE YOU MONEY.

**WHY?**

Because we buy the loose stones direct from the cutters and save brokers' Commissions.

Because we buy in large quantities and, by paying cash, secure bottom figures. Because we make all our own mountings and save the manufacturing jeweler's profit.

Because we bought an immense stock before the new tariff law went into effect and save you the present 25 per cent. duty.

Because we sell more diamonds than any other concern in the country and can afford to do business on a small percentage of profit.

**LOOK**

at our prices. You would not ask lower figures than we quote even if we offered to sell the goods

**AT YOUR OWN PRICE!**

585  $\frac{3}{4}$  Karat Diamond.  
\$3 75 Each.

588  $\frac{1}{2}$  Karat Diamond.  
\$6 25 Each.

590  $\frac{1}{4}$  Karat Diamond.  
\$3 75 Each.

382  $\frac{1}{2}$  Karat Diamond.  
\$3 85 Each.

387  $\frac{3}{4}$  Karat Diamond.  
\$4 95 Each.

391  $\frac{1}{2}$  Karat Diamond.  
\$5 50 Each.

397  $\frac{1}{4}$  Karat Diamond.  
\$8 00 Each.

399  $\frac{1}{4}$  Karat Diamond.  
\$10 15 Each.

402  $\frac{1}{4}$  Karat Diamond.  
\$10 20 Each.

411  $\frac{1}{2}$  Karat Diamond.  
\$16 25 Each.

415  $\frac{1}{4}$  Karat Diamond.  
\$17 55 Each.

416  $\frac{1}{4}$  Karat Diamond.  
\$17 55 Each.

**14K SOLID GOLD MOUNTINGS.**

**REMARKABLE OFFER.**

We will buy back any diamond bought from us at any time within one year from date of sale and will pay for same the amount paid us, less ten per cent., which we charge as rent and as part of the expense of resetting the stone. We expect to make our money out of such a transaction from the increase in the value of the diamond and by increasing our sales through making such an offer.

Any of the above goods will be sent C. O. D. subject to examination on receipt of 50 cents as a guarantee of good faith, and if not satisfactory may be returned. They are selected from our large illustrated catalogue for 1895. Copy sent free on request.
